"We'll be building these new pickups in both four-wheel drive and two wheel drive," Cappy said. "This is our first state of the art product in the two wheel drive market, which accounts for 75 percent of the light truck market, so it is very important for us to get the name and the timing out front as quickly as possible."

He said the hundreds of suggested names included more than a dozen North American Indian tribes, and was sprinkled with animals, reptiles, cities, mountains, and space age subjects.

Cappy said AMC pared the list to 11 finalists for a special evaluation by 99 compact pickup owners and 113 potential buyers in Dallas, Denver, Pittsburgh and San Diego.

They were asked to rate the names in such categories as appropriateness, likeability and memorability, and also on various image attributes.

"Comanche was deemed the

Ford's Australian small van

A 1.4-liter, four-cylinder gasoline engine powers the new small Econovan introduced by Ford Motor Co. of Australia, Ltd. A five-speed overdrive manual transmission is standard. The smallest of Ford's three Econovan models is offered with dual or single rear wheels.

Mazda aims Sport LE at mid-priced market

LOS ANGELES. — Seeking a larger share of the mid-priced compact pickup truck market, Mazda has introduced the B2000 Sundowner Sport LE, which it calls an economical combination of sport and luxury features.

The new truck incorporates the B2000 Sundowner Sport's long list of standard equipment,

Picture on Page 42.

and adds such features as chrome front and rear bumpers, a sliding rear window and new two-tone paint and striping packages.

The Sport LE also offers metallic painted spoker wheels, radial tires with raised white letters, dual sport mirrors, a digital clock, a tachometer, halogen headlights, a four-spoke sport grip steering wheel and a five-speed manual transmission.

Velour bucket seats with integral headrests and a large center console — items that were optional on the Sport — are standard on the Sport LE.

Two-tone paint treatments include a sunbeam silver accent paired with either a black metallic or red metallic main color. The striping package combines silver with orange and is color coordinated with the truck's spoker wheels and velour upholstery.

• "These features position the new truck solidly in the sport-compact market, yet the Sport LE carries a base sticker price of $6,795, as much as $1,300 less than other comparably equipped

truck personnel

Anderson named head of Australian Mack

Neil J. Anderson has been appointed managing director of Mack Trucks Australia Pty., Ltd., with responsibility for the wholly owned subsidiary of Mack Trucks, Inc.

N. J. Anderson

Anderson, previously general manager, joined Mack in the early 1960s as a sales manager for the firm's International Operations, then based in Bermuda. He moved back to his native Australia, where he established and managed Mack branches in Darwin, Melbourne and Sydney. He became general manager of the subsidiary in 1981.

Gurnitz, Roudebush appointed Rockwell VPs

Robert N. Gurnitz has been named vice president and general manager of Rockwell International's On Highway Axle Division. He had been president of the Body Components Division.

Ronald L. Roudebush has been appointed vice president and general manager of the Highway Brake & Trailer Axle Division. He joined the firm in 1973 and previously headed the Service Parts & Electronics Division.

Richard A. Banfield has been named vice president of operations support and service parts. Previously vice president of operations, he joined Rockwell in 1974 as manufacturing manager of the firm's Newark, (O.) truck axle plant.

Larry D. Maisch has been appointed chief engineer of the Government Products Division. He had been engineering manager for the division.

Arthur J. Rhodes has been named manager of the Newark, (O.) truck axle plant, and **David B. Rayburn** is the new manager of the Winchester (Ky.) truck axle plant.

IVECO names Moore to top marketing post

Jerry W. Moore has been named senior vice president of marketing for IVECO Trucks of North America, Inc.

Moore joins IVECO from Howard Swink, Inc., where he was vice president/director of client services for the marketing communications firm.

John Dreibelbis has been appointed director of marketing plans and strategies, responsible for analysis of competitive products and markets, as well as forming plans to develop existing and new business. He formerly was in marketing communications with Certainteed Corp.

Ford gets award for magnesium use in compact trucks

DEARBORN. — Ford Truck Operations has received an award from the International Magnesium Assn. for "leadership and innovation" in the design and application of magnesium parts in Ford Ranger, Bronco II and soon-to-be-introduced Aerostar vehicles.

The award was presented at the association's world conference in London, England.

In accepting the award, Henry W. Potoczak, Ford light-truck design and development chief engineer, noted that Ford's first application of magnesium in light trucks was a brake and clutch-pedal support bracket for Ranger and Bronco II. The second was a clutch housing for Ranger, Bronco II and the Aerostar compact van.

"The clutch housing presented a special challenge," he said, "because it lives in a corrosion-prone environment, exposed to road dust, moisture and salt. The magnesium housing is doing its job without the aid of any special coating."

Potoczak added that Ford is looking at many other possible magnesium applications that hold substantial promise.

truck industry news

Count tops '78 by almost 90,000 units

5-month registrations hit a record 1,597,405

Five-month registrations of new trucks of all types in the U.S. were the highest ever, with impressive gains in all three market segments and each of the eight weight classifications.

R. L. Polk & Co. reported 1,597,405 units were registered in

Table on Page 38.

the January-May period, an increase of 46.5 percent over last year's 1,090,052 and almost 90,000 more than the previous five-month high of 1,510,024 established in 1978.

During the month, there were a record 348,273 tallies, up 37.1 percent from the year ago 253,943. The previous May high of 342,144 registrations also was achieved in 1978.

Through May, light-truck registrations totaled 1,506,474 units, up 46.7 percent over last year's 1,026,947 and 9.4 percent higher than the 1,376,432 vehicles tallied in the same period six years ago.

Medium trucks were up 18.6 percent over a year ago, 18,521 versus 15,613, but they were 69.4 percent below the 60,609 tallies through May in 1978.

Heavy-truck registrations through May totaled 72,410, up 52.5 percent over the year-earlier 47,492 and less than 600 units fewer that the 72,983 tallies in 1978.

Five-month registrations of Group 1 trucks were up 49.5 percent to 852,997 units, compared with 570,423 a year ago. The Group 2 count was 40.7 percent higher, 637,116 versus 452,750. Group 3 tallies more than quadrupled, from 3,774 last year to 16,361.

In Group 4, there were 244 tallies through May, more than

May HD surge boosts '84 tallies to four-year high

Registrations of new heavy trucks in May were the highest for the month in five years, boosting the January-May total to its best mark since 1980.

During the month, according to R. L. Polk & Co. statistics, 17,491 new Groups 7 and 8 vehicles were registered, an increase of 72.2 percent over last year's 10,155 units.

The alltime high for May occurred in 1979, when 20,817 trucks were tallied.

Through May, registrations totaled 72,410 units, up 52.5 percent from last year's 47,492. In the comparable period in 1980, Polk reported 85,213 big-truck tallies.

Although registrations of International and Ford heavies were up substantially over last

Service mood is upbeat at dealerships

Service chiefs say future looks bright

By Al Fleming
Industry Editor

Day after day the cars stream into auto dealerships for service and maintenance.

Standing in the midst of the stream are dealership service managers, the buttress of the industry's service operation, who in most cases are more invisible than visible to car buyers and car makers.

Yet they are among the key trackers of the nation's automotive fleet, and play a serious role in the serious business of buying, selling and servicing automobiles.

For a view of these skippers of the service bays, AUTOMOTIVE NEWS conducted its second annual survey of service managers at domestic and import new-car dealerships.

The in-depth look at this special automotive group was taken via a questionnaire sent to service managers throughout the U. S. It indicates that those who are in charge of departments that service and maintain America's huge fleet of automobiles typically are:

- More optimistic about the automobile business and their dealerships' growth in that business than they were a year ago.
- More confident of reaping greater profits in their service operations in coming years.
- Of the opinion that their dealerships will purchase new service equipment during 1984, and that most of it will be for tuneup and wheel alignment/balance work.
- Strongly of the belief that new cars are becoming less lucrative to service, but that a growing population of old cars will nourish the profitability of dealer service activities.
- Saying that tuneups are adding overwhelmingly to service income, while engine and transmission repair are becoming duds on the profit ledger.

Continued on Page E-2

Survey

Continued from Page E-1

• Suggesting that new-car warranties are contributing increasingly to the income of their companies, but extended service contracts are not.

• On a more personal level, the AUTOMOTIVE NEWS survey shows that service managers at new-car dealerships in the U.S.: May be giving up some of their service decision-making powers to dealership management; may be maturing slightly in age and experience; are spurred by bonuses paid by their employers; and are becoming somewhat more satisfied with their incomes.

Moreover, the survey indicates that for the second straight year the nation's new-car dealership service managers are bubbling with optimism over the future of the automobile business and their own operations. As in 1983, nearly 90 percent of those surveyed say they expect the car market in the U.S. will improve in the next two years, and this year more than nine out of 10 believe their dealerships' business will continue on the upswing. Less than three percent think things will get worse.

As a Chrysler-Plymouth dealership service manager in Louisville points out, "The state of the economy continues to be impressive, and there are lots of old cars on the road."

A Ford dealer in North Suburban, Ill., notes that "the average car is seven years old, and that means more sales and service in the years ahead."

On the other hand, a service manager at a Chrysler-Plymouth outlet in Mankato, Minn., anticipates a worsening business climate because of a "weak agricultural situation in the Midwest farm belt."

• Among those surveyed, the Chevrolet nameplate continued to be the No. 1 seller in about 16 percent of the dealerships, with Toyota the top import brand. Some 37 percent of those surveyed work for single-franchise dealers in 1984, down from 44 percent a year ago. Cadillac continues as the top dual franchise among domestic brands, Nissan among imports.

The survey indicates a major sales comeback has been achieved by small dealerships during the past year. Of service managers that responded, exactly 50 percent work at dealerships that sold fewer than 400 new cars in the past 12 months; that compares to 39 percent a year ago. A sales step-up is also being realized at dealerships with annual volumes of 1,300 to 1,999 new cars; those outlets accounted for 15.6 percent of the responses this year compared to 10.9 percent last year.

Of those surveyed, 63.7 percent worked for dealerships located in cities or towns of less than 250,000 population, while 27.2 percent were in areas of more than 500,000 population.

All in all, the vast majority of service managers expect service profits at their dealerships offer prospects for increasing in the future. Some 97 percent said so in this year's survey compared to 96 percent last year.

In Nashville, Tenn., a service manager for sporty, high-luxury import makes points out that "we've upgraded our facility and personnel to fulfill current demand, and added a second shift.

At a General Motors dealer-

Mitsubishi	0.3%	0.1%
Saab	0.3%	0.1%
Others	0.3%	0.4%

Question 3: What other makes of cars (domestic or import) are you dualed with?

Car Make	% Responses, 1984	% Responses, 1983
None	37.9%	44.9%
Cadillac	9.1%	8.7%
AMC/Renault	6.4%	6.0%
Buick	6.1%	6.3%
Oldsmobile	5.3%	5.2%
Pontiac	4.9%	4.7%
Nissan	4.2%	4.7%
Dodge	4.2%	1.5%
Chrysler-Plymouth	3.7%	2.4%
Toyota	3.3%	2.4%
Ford	3.0%	2.2%
Chevrolet	2.6%	3.7%
Subaru	2.6%	3.9%
VW/Audi/Porsche	2.1%	3.9%
Lincoln-Mercury	1.9%	2.0%
BMW	1.6%	0.8%
Honda	1.6%	2.7%
Mercedes-Benz	1.6%	1.1%
Saab	1.3%	1.7%
Volvo	1.0%	0.8%
Mazda	1.0%	2.4%
Mitsubishi	1.0%	0.2%
Isuzu	1.0%	3.6%
Others	2.1%	0.8%

Question 4: How many new cars did your dealership sell in the past 12 months?

Number of Cars	% Responses, 1984	% Responses, 1983
1 to 199	21.9%	15.8%
200 to 399	28.1%	23.6%
400 to 799	12.5%	22.6%
800 to 1,299	25.0%	26.9%
1,300 to 1,999	15.6%	10.9%
2,000 or more	3.1%	4.1%

Question 5: What is the population of your city, town or metropolitan area?

Population	% Responses, 1984	% Responses, 1983
Under 5,000	36.4%	42.1%
50,000 to 249,000	27.3%	22.4%
250,000 to 499,999	9.1%	9.6%
500,000 to 999,000	15.2%	13.3%
1 million or more	12.0%	12.6%

Question 6: Do you, as service manager, feel that your service department offers a potential for increased profits in the future?

	% Responses, 1984	% Responses, 1983
Yes	97.2%	96.1%
No	2.8%	3.9%

Question 7: Do you feel that your dealership management believes the service department offers the potential for increased profits in the future?

	% Responses, 1984	% Responses, 1983
Yes	94.4%	95.2%
No	5.6%	4.8%

Question 8: Do you, as service manager, believe your dealership is spending enough on advertising and promotion to improve your service business?

	% Responses, 1984	% Responses, 1983
Yes	74.3%	66.4%
No	25.7%	33.6%

Question 9: Who hires the mechanics in your service department?

	% Responses, 1984	% Responses, 1983
Dealership owner	17.8%	12.3%
Dealership manager	6.7%	6.2%
Service manager	75.5%	81.5%

Question 10: When your dealership buys new service equipment are you involved?

	% Responses, 1984	% Responses, 1983
Yes	97.2%	98.4%
No	2.8%	1.6%

Question 10: Which statement below best describes your involvement in buying new service equipment?

	% Responses, 1984	% Responses, 1983
Originate purchase request	39.9%	38.1%
Approve make(s) selected	24.3%	24.0%
Negotiate terms	3.7%	5.4%
Give advice on needs	53.5%	57.7%

Question 11: Does your dealership plan to buy new service equipment this year?

	% Responses, 1984
Yes	69.6%
No	30.4%

(Note—question not asked in 1983 survey.)

Question 12: What type of service equipment does your dealership plan to buy this year?

	% Responses, 1984
Tuneup	27.7%
Wheel alignment	21.3%
Wheel balance	14.9%
Collision repair	12.8%
Brake	10.6%
Transmission	4.3%
Engine overhaul	2.1%
Other	6.3%

(Note—question not asked in 1983 survey.)

Question 13: Are new model cars more profitable to service than those of previous years?

	% Responses, 1984	% Responses, 1983
Yes	11.8%	14.6%
No	52.9%	67.4%
Same	35.3%	18.0%

Question 14: How many hours per week is your service department open?

Number of Hours	% Responses, 1984	% Responses, 1983
Less than 45 hours	11.1%	23.5%
45 to 50 hours	47.2%	40.7%
51 to 55 hours	19.4%	19.5%
56 to 60 hours	8.3%	9.3%
More than 60 hours	14.0%	7.0%

Question 15: How many employes are there in your service department (including parts and service personnel)?

Number of Employes	% Responses, 1984	% Responses, 1983
1 to 10	33.3%	27.4%
11 to 20	27.8%	25.7%
21 to 30	13.9%	19.5%
31 to 40	11.1%	13.3%
More than 40	13.9%	14.1%

Question 16: What is your most profitable service operation?

	% Responses, 1984	% Responses, 1983
Tuneups	48.5%	28.1%
Brakes	34.3%	26.5%
Wheel alignment	20.0%	15.6%
Transmissions	17.1%	23.4%
Collision repair	16.4%	13.0%
Wheel balance	11.4%	12.5%
Engine overhaul	10.5%	25.5%
Other	11.4%	12.5%

Salary + bonus	41.2%	29.7%
Salary + incentive	35.3%	42.2%
Salary + other	8.8%	11.7%

Question 24: Do you believe your salary and benefits are commensurate with your experience?

	% Responses, 1984	% Responses, 1983
Yes	63.6%	59.7%
No	36.4%	40.3%

Note: In some cases totals add to more than 100% because of multiple responses.

Survey

Continued from Page E-2

ship in Salt Lake City, a service manager calls service "a necessary evil, and to get your share is easy if you hustle."

A Chevrolet dealership head-of-service in Oakland, Calif., points out that automobiles have "changed so much in the past few years that independent service facilities cannot keep up with technology, and that means more business for us."

In Rock Island, Ill., a Porsche-Audi service manager says, "The number of cars in our market area is increasing to the point that we have to add more (service) technicians to keep up."

Service managers are just as confident that their dealership owners share their optimism about future service profits. Well over 90 percent expressed that point of view in the survey.

At a GM multi-brand shop in Key West, Fla., a service manager notes that dealerships are getting a "greater percent of service because of complex automotive systems," and that dealership management, as a result, is showing a willingness "to spend for salaries, space and tools."

An Atlanta, Ga., service manager for Chrysler-Plymouth and Dodge products says he has his management's "support all the way, and his staff is "more technically competent than ever because of Chrysler Corp. training."

As he and his dealership owners see it, says a service manager at an Oldsmobile-Cadillac-Honda franchise in Ardmore, Okla., "High tech and electronics will force customers to come out from under the do-it-yourself shade tree and return to the dealer for service."

To support that theory, dealerships apparently are stepping up their spending on service advertising and promotion. In this year's survey, 74 percent of the respondents believe their dealerships are spending amply on advertising aimed at boosting service traffic; that compares to 66 percent a year ago.

A Pontiac-Cadillac dealership service manager in Milwaukee notes that "we're spending more today than in previous years. The (Mr.) Goodwrench program has helped."

A Ford dealer service manager in New Orleans says he is in charge of advertising budgets, he is spending for newspaper and radio advertising, and is "getting all the work we can do."

"We have numerous mailing programs," says a Volkswagen-Mazda dealership service manager in Worcester, Mass. "Target advertising—local cards and flyers—brings in much additional traffic."

Although most service managers (75 percent) participating in the survey say they are in charge of hiring mechanics in their departments, 17 percent say that dealership owners do such hiring; that contrasts to only 12 percent last year.

"The dealer is very much involved in the service department, but as service director I feel I am most qualified to make those (hiring) decisions," declares a respondent at a Chevrolet-Oldsmobile-Cadillac franchise in Green Bay, Wis.

A multi-brand import service manager in Paterson, N. J., hires his mechanics because "due to my own experience and technical background."

Blazer goes to school

Bud Gadwa, left, automotive instructor, Green River Community College, Auburn, Wash., accepts the keys to a Chevrolet Blazer 4x4 from Richard M. Adams, right, Chevrolet Seattle assistant zone service manager. Also on hand for the presentation were Curt Geise, second from left, service manager, Bothell Bros. Chevrolet, Auburn, and Howard Shaw, second from right, Chevrolet assistant service manager-customer assistance.

"It's my responsibility (to hire mechanics)," declares a Ford-AMC service manager in Alabama. "The technicians work under my jurisdiction."

In Minneapolis, the service manager at an AMC-Renault dealership says, "Group leaders and department managers take part in interviews (of prospective hirees). "We find the more people involved, the better people we get."

As was the case last year, this year's survey indicates that well over 90 percent of service managers participate in buying new service equipment at their dealerships, although only a few (less than five percent) actually negotiate terms of purchase.

More than 69 percent of those surveyed say their dealerships plan to buy new service equipment in 1984. More than a fourth of those purchases (27.7 percent) will be tuneup equipment and more than a fifth (21.3 percent) will be for wheel alignment work. Notes a BMW service manager in Jamaica, N. Y.: "We are having a general updating of equipment." A Honda-Isuzu service manager in Akron adds: "We will buy new special tools as directed by the (auto) manufacturer."

It is the feeling of service managers surveyed that new-model automobiles offer less service-profit potential than those of past years. Only 11.8 percent say they expect '84 cars to be bigger profit generators than their predecessors. For the most part, the reason is that less and less routine maintenance is being required by auto makers.

"Today's state-of-the-art cars require less maintenance, and warranties cover more repairs," says a Nissan service manager in Rocky Mount, N. C.

A Cadillac-Avanti service manager in St. Paul, Minn., notes that "the newer the car, the more difficult it is becoming to diagnose problems. It's increasingly complex."

Maybe that difficulty is part of the reason why service operations are working longer hours than a year ago. Of those surveyed, only 11 percent are open fewer than 45 hours a week, down from 23 percent last year, while 14 percent are running more than 60 hours compared to seven percent last year.

As was the case last year when over half (53 percent) of those surveyed directed service departments with fewer than 20 employes, this year the count is 61 percent.

Also like last year, tuneups are proving to be the most profitable service operation at most dealerships (48 percent), although that is up considerably from 1983 (28 percent).

The least profitable—the same as it was last year—is engine overhaul work, 40 percent of service managers listing that compared to 33 percent in 1983. As a Pontiac-Buick-Subaru dealership service manager in Buffalo notes, "Because we're small (less than 200 new-car sales annually), it is difficult to put a technician on a big job like an engine overhaul, and leave him on it until the work is done. We have to work 'quickies' in with big jobs. We don't specialize in just one operation because we 'menu' items—such as tuneups, brakes, wheel balance and alignment—in order to be competitive with gas stations and service centers."

According to those surveyed this year, nearly half (48 percent) indicate that new-car warranty work contributes "significantly" to their profits; that's up from 38 percent last year. Only eight percent this year, however, say that extended service contracts are significant contributors to profits, down from 23 percent last year.

The age of the typical service manager who responded to the 1984 survey is in the 35 to 39 age group, the same as last year. However, the biggest percentage climb of any age group was in the 55 to 59 bracket which accounted for 14 percent of responses this year compared to seven percent last year.

Being a mechanic is the most direct line to the job of service manager. That's the position 44 percent of those service manager's surveyed say they had before getting the top job.

Like those surveyed last year, this year's respondents typically have been service managers for four to seven years. The average compensation for a service manager this year falls into the same bracket as last year — $25,000 to $29,999. However, whereas last year 17 percent said they were making more than $40,000 a year, this year 21 percent claim that.

In most cases (41 percent) the total compensation for service managers comes from salary and bonus.

Asked if they believe their salary and benefits are commensurate with their professional experience, 63 percent this year responded "yes" compared to 59 percent a year ago.

Service business booming

Yearly increase headed for new record

By Francis J. Gawronski
Service Editor

If the first four months of the year are any kind of a barometer, service and parts business in new-car dealerships in 1984 could register the biggest increase over the year-earlier volume in the 23-year history of the Automotive News Service Index.

Shop business in the four-month period is running at a clip that, if it continues, would eclipse the previous record established in 1978 when volume topped 1977's service-parts volume by 12 percent.

Shop business in the dealerships continued to bounce back with the nation's economy in April as the rate of growth topped 15 percent for the fourth consecutive month this year.

According to the Service Index, shop volume in April amounted to 115.1 percent of the business registered in the same month of 1983.

In January, parts and service business opened the year at 118.5 percent of the year-earlier volume and jumped to a Service Index monthly record of 126.2 of 1983's business in February. In March, shop business was 115.3 percent of the volume in the same month the year before.

As a result of the strong showing in the first four months of 1984, the year-to-date volume for the dealers' service and parts business is running 118.6 percent of the business for the same period in 1983.

As a comparison, shop business for the first four months in the record year of 1978 was 110.1 percent ahead of the same period the year before.

In January, 1978, service and parts business amounted to 107.4 percent ahead of the year earlier month. February was up 9.0 percent, March increased 13.6 percent, and April jumped 10.5 percent.

The previous yearly high level occurred in 1976 when service and parts business in new-car dealerships increased 10.6 percent over year-before volume.

Service and parts business as regularly measured by the Service Index since it was established by AUTOMOTIVE NEWS in 1961, has registered increases over volume recorded the previous year in all but two years.

The two declines occurred in 1974 when service and parts business recorded by dealers was 99.7 percent of the volume achieved the year before, and in 1980 when shop business amounted to 98.3 percent of the total achieved in 1979. (See accompanying table.)

The dip in 1974 was attributed to the downturn in the nation's economy and the rippling effects of the energy crisis that started in 1973. Car dealers contended that motorists "are just not spending for repairs because of concern over short supply of gasoline and the long waiting line at gasoline stations."

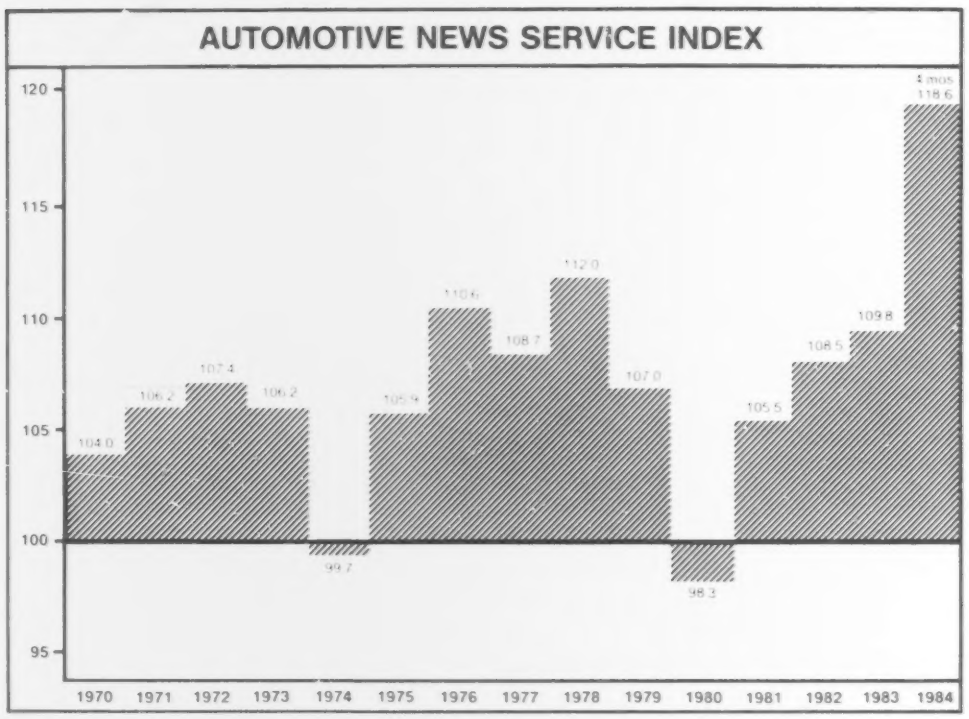
Dealers blamed the general economic downturn and the resultant high employment for the motorists' apathy toward car maintenance and repairs in 1980.

During the 1980 downturn, shop volume recorded the second and third worst showings in history in March at 86.7 percent of the year-earlier business, and in November at 89.7 percent of the November, 1979, volume.

Dealers' shop volume bounced back in 1981 to 105.5 percent and has been on the positive side ever since.

Dealers' shop business, as tracked by the Service Index as it measures all facets of service operation, is currently on a 13-month string in which service and parts business has registered an increase over that of the year-earlier month.

Figures used in the Service Index are compiled from reports on shop operations from a cross-section of the nation's new-car dealerships.



PartsFinder

No hide and seek

COLUMBUS, O. — Finding hard-to-locate parts has just been made easier for General Motors dealers using Management Computer Service Inc.'s (MCS), auto-parts data base, PartsFinder.

According to Don Turner, MCS president, a toll-free 800 number has been added to the program so that participating dealers in the U.S. can reach PartsFinder quicker and easier.

PartsFinder is an interactive, on-line data base that links all participating dealerships, regardless of the inventory control system each uses.

Designed to make finding parts easier, PartsFinder was launched with 18 dealerships in the Columbus area in 1982. Late in 1983, MCS began marketing the system in other cities until today it is operational in more than 200 dealerships with over 150,000 parts.

In addition to Columbus, the system is being used by dealers in Cleveland, Akron and Youngstown, O.; Detroit, Lansing and Grand Rapids, Mich.; Pittsburgh; St. Louis; Milwaukee, and Atlanta.

According to Turner, both local and regional data bases are available to every participating dealer. The system normally checks the stocking status of local dealerships. If the part needed is unavailable locally, the clerk can inquire about dealers in other nearby cities. If he's still unable to find the part, he can make one toll-free phone call to MCS to check national data base—all 200 dealers.

During the next year or so, Turner said MCS will continue to market the on-line service in the nation's major markets.

A companion project, just getting under way, will link the dealers who are too small or too remote for the on-line service. These dealers will be able to participate in the PartsFinder through microfiche, he said.

GM Parts has graduated its first 1,000 parts managers from the GM Parts College of the General Motors University of Automotive Management. On hand for the ceremony at Texas Christian University, Fort Worth, were Evelyn Green, dealer development and services manager, GM Parts; Gerald Smith, parts manager of Tom Bell Chevrolet, Memphis; Wade McMillan, parts manager, Ken Pruitt Buick, Garland, Tex. and Ed Schreitmueller, sales manager-west, GM Parts.

Dealers reap $25 billion

They get 30% of service and parts dollars

By Francis J. Gawronski
Service Editor

New-car dealers accounted for the biggest share of the $83.2 billion automotive service and parts business sales in 1983.

According to NADA figures, last year's total service and parts volume eclipsed the $76.8 billion market recorded in 1982 by 9.2 percent and 1981's service and parts volume by 14.3 percent.

According to NADA, the nation's 24,725 dealerships, accounting for only 8.3 percent of the 299,025 automotive repair facilities in the U.S., did $25.1 billion, or 30.8 percent, of the total service and parts business.

Auto repair shops, including independent and franchised shops, did $23.1 billion worth of business in 1983. This group numbers 180,000 and accounts for 60.2 percent of the total outlets.

Tire, battery and accessory dealers, according to NADA, who number 20,000 for 6.7 percent of the total outlets, accounted for $17.6 billion, or 21.1 percent of the market.

The service-station category, totaling 70,000 for 23.4 percent of outlets, recorded $7.8 billion, or 9.4 percent of 1983's market.

The service-station category, NADA said, includes only those outlets that perform "significant repair work" (i.e., those that perform work beyond simple oil changes or lube jobs and/or those outlets that receive at least 2 percent of total dollar revenue from service labor).

The 2,800 mass merchandisers, 0.9 percent of the total, amassed $7.6 billion, or 9.1 percent, of the service-parts revenue.

All other service outlets (includes non-franchised dealers, farm equipment dealers and fleet shops), numbering 1,500 outlets for 0.5 percent of the total, accounted for $2.0 billion, or 2.4 percent, of the market.

According to NADA, franchised new-car dealers' disproportionate market share — 30.8 percent of the total service and parts sales in 1983, even though they accounted for only 8.3 percent of the total automotive repair facilities — reflects their "propensity to do more difficult and more expensive repairs, as well as the fact that new-car dealerships have larger facilities on average."

Contrary to 1982, NADA said, most of the increase in dealership service and parts sales in 1983 resulted from increased work and not increased prices.

"The average dealer in 1983 had a 4 percent increase in dollar sales per repair order and an 8 percent increase in the number of repair orders written," NADA said.

"Because of the decline in the average number of dealerships in operation in 1983," NADA said, "the total number of repair orders written by all dealers showed a smaller increase—5.5 percent."

According to NADA, total service labor sales in 1983 amounted to $10,409 million, up 9.4 percent over 1982's volume of $9,515 million, while parts sales for 1983 were $14,733 million, up 9.8 percent over the volume of $13,413 million the year before.

Total service and parts sales for 1982 were $25,142 million, an increase of 9.7 percent over 1982's volume of $22,928 million.

A breakdown of service labor sales, for 1983, compared with 1982, as compiled by NADA, are as follows:

Customer mechanical, $4,101 million, up 8.0 percent over 1982's volume of $3,796 million; customer body, $1,801 million, compared with $1,713, up 5.1 percent; warranty, $1,395 million, compared with $1,180, up 18.2 percent.

Sublet, $894 million, compared with $790 million, up 10.6 percent; internal, $1,447 million, compared with $1,304 million, up 11.0 percent, and other,

The Goal: Profitable Service*

"We have been a dealer since 1940. I heard about NADA Service Systems in Automotive Executive magazine. Mechanics' production went from an average of 80% to 130% in one week. It is the greatest system and made believers out of our service manager, service dispatcher, and service writers."

Ross Johnson, President
Johnson Ford — Kingston, New York

"Our system at this time is working great. We are dedicated to making sure it does work. The benefits are already self-evident. I would be glad to recommend Service Systems and Charlie Gates to anyone that would want to call me."

Gordon Rountree, Jr., President
Rountree Olds-Cadillac — Waco, Texas

The Solution:
NADA SERVICE SYSTEMS

Factories

Continued from Page E-16

elements designed to increase customer satisfaction with sales and service experiences. The program includes such features as Lifetime Service Guarantee, Technical Hotline, the Ford Consumer Appeals Board and extensive customer feedback programs.

Barion said the company's dealers also are dedicated to the Quality Care concept — to the extent that established committees in the Ford and Lincoln-Mercury dealer councils oversee the program and make suggestions at the dealer level.

To keep up with the increased demand for service as well as advances in automotive technology, dealership personnel are requiring more training, Barion said. "In 1978, the average dealership service technician received eight and a half hours of service training during the year," he explained. "By 1983, the yearly average was 22 hours. We don't foresee quite as dramatic a growth in training in the next five years, but we do expect further growth."

Advanced automotive technology also will require advanced diagnostic equipment, Barion said.

"The extensive use of computer technology in vehicles during the next decade and beyond will require that we achieve a new plateau of vehicle system diagnosis and repair," he said.

Diagnostic equipment, some of which is already in development, will identify the problem, instruct the service technician regarding the proper repair, and, with computerized equipment show him or her how to do it.

"Equipment that has this degree of sophistication will not be inexpensive. However, the efficiencies will quickly offset the acquisition cost and provide the potential for highly profitable operations and improved customer satisfaction," Barion added.

One innovation designed to help dealers keep ahead of a changing market is the Dealership Retail Parts Store, launched earlier this year. A new concept in dealership automotive parts merchandising, these stores represent a supermarket-type retail auto parts store within a new car dealership.

"The new Dealership Parts Store is aimed at helping our dealers capture an increased share of the growing do-it-yourself market," Barion said.

"These stores will feature products an automotive do-it-yourselfer might need for working on his or her vehicle — genuine Ford and Motorcraft replacement parts and accessories, waxes, oil, lubricants, and tools. They'll also have rally jackets, caps, T-shirts and other merchandise attractive to the automotive parts buyer.

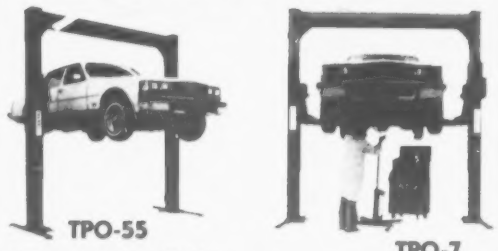
The development of the store concept has come at a particularly good time, since the aftermarket parts industry has reached the $50 billion sales level and is expected to go higher.

"We expect a steady improvement in sales over the next few years," Barion said. "Continued economic health and demand for new vehicles should cause the aftermarket to exceed $70 billion in the next five years. We also expect our Motorcraft sales will keep pace or exceed the market average, primarily because of such innovations as Quality Care, Retail Parts Stores and other aggressive merchandising programs.

"One thing we can all count on, competition will remain stiff. History has shown that the parts and service market is extremely aggressive and capable of responding to fundamental changes in business. It is not at all reluctant to add resources or expand hours, or do whatever it takes to be competitive.

"At Ford, we are dedicated to 'continuous improvement' in all aspects of our business, a philosophy we believe will assure continued growth in the future and will enable our dealers to remain in an extremely competitive position."

Benwil. The only twin-posts with no floor obstructions.

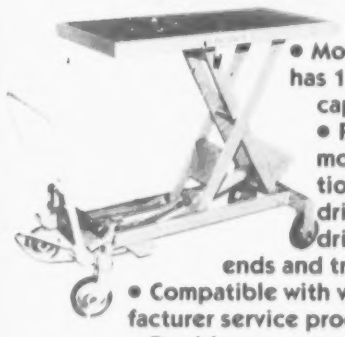


- Two models available
  - TPO-7–7,000-lb. capacity
  - TPO-55–5,500-lb. capacity
- Clear floor for trans jacks, tool cabinets, muffler stands
- Rugged and dependable
- No-excavation installation
- Backed by 4-year warranty

Benwil offers a complete range of automotive and heavy duty above-ground lifts, with capacities ranging from 4,500 to 96,000 pounds. Our lifts feature premium-quality hydraulics and the kind of rugged construction that has made us the leader in our industry. Individual lift brochures and full-line catalog available upon request.

BENWIL

New Benwil Portable Engine Removal and Installation Lift

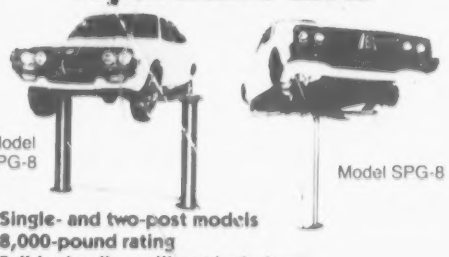


- Model MEL-1650 has 1,650-lb. capacity
- Perfect for removal/installation of front-drive engine/drivetrains, rear ends and transmissions
- Compatible with vehicle manufacturer service procedure
- Doubles as a portable work bench

Fully hydraulic and equipped with a safety two-wheel brake system, Benwil's MEL-1650 was designed for the removal and installation of front-wheel-drive engine/drivetrain units. Also ideal for removing and installing transmissions and rear ends, the unit doubles as a work bench that's hydraulic-adjustable to any height to 38¼ inches. Table measures 39¾ × 20½".

BENWIL

New Benwil In-Ground Hydraulic Lifts



- Single- and two-post models
- 8,000-pound rating
- Full-hydraulic – will not leak down
- Exclusive hard-chrome piston increases seal service life up to 1000%
- Rugged – arms machined from solid steel
- Two-post has gear-synchronized columns
- Available with fiberglass-coated cylinder and tank for max corrosion resistance

Benwil raises the state of the art in in-ground lifts with two rugged full-hydraulic designs. The two-post model is a drive-through design which provides greater under-vehicle access, and the unit locks at any height. All units are factory tested, including the hydraulic system, and are backed by Benwil's 2-year parts, 1-year labor warranty. The two-post has 57½" centers for easy adaptation to major-supplier wheel alignment racks.

Building service profits

Case study: Maximizing computer systems

By Marc Stern
Staff Correspondent

GRAND RAPIDS, Mich. — To say that Tom Kilmer, general manager of Harvey Cadillac here, is enthusiastic about his dealership's new computer system is putting it mildly.

Why is he such a supporter? It's because of what he perceives the new system will mean for his dealership, improved productivity and performance.

"I'm just tickled with the new system," he said recently in a phone interview, because of all the potentials it provides him.

Not only will it be a productivity increasing tool for the entire dealership, but it will also be a prime management tool for Kilmer and his crew of managers, which will help them all run the dealership more effectively and will help increase profitability.

Just look at the results so far. According to Kilmer, since the dealership began implementing the Oakleaf computer system, it has realized savings in the general business office and increased business from the finance and insurance office, two of the areas where it was implemented first.

"The productivity increased so much in the general office that we were able to do the same work with one less person and, though I really don't know how much the computer contributed to FI, I do know we have had a 25 percent increase from that office," Kilmer said.

And, he expects like increases in the service department, the last one to go on line. (Oakleaf is one of several major automotive computer suppliers, including Reynolds and Reynolds, CARS, ADP and others.)

What will it handle? It will provide detailed information on any customer's vehicles and will provide a list of suggested service recommendations that is custom tailored to the mileage of the vehicle. It will also provide a solid backup for the service manager and service writers.

For example, with the system, which has been operational in Harvey Cadillac's shop for more than a year, when a customer drives through the service entrance, the service greeter or writer will take a code and enter it into the computer terminal at the desk.

Automatically, the Oakleaf system searches its memory and points out a complete repair order, which includes the name, address, telephone number and service history of the car.

At the same time, it prints out recommendations of the service which should be done at the mileage on the odometer. Rather than relying on mileage averages, the system relies on the real-world mileage the car has accumulated.

Not only does it provide this information, it also reminds the service writer of various things they might forget to ask. The system, whose computer is actually housed in the business manager's office, also automatically remembers anything that is done to the car.

Harvey Cadillac's computerized service operation increases productivity, suggests service jobs and provides a solid backup for the service manager and service writers.

Not only is the system a service reminder, but it is also a potential service sales tool—by making its mileage-based service recommendations to the service writer who then can use this information when he talks with the customer, telling the customer the extra service his car needs.

This would be in addition to the years of experience the service personnel have had with customers.

"We have professional service writers at the desk who know their customers and who are sales and safety conscious," Kilmer said. Even before the computer came in, they were advising them of problems found during repairs and they were keeping on top of things back there," Kilmer says.

Not only is the computer a key service and sales aide, but it is also a key management aide at this Cadillac Master Dealer, according to Kilmer.

"I feel it's one of the two successful service systems. It's geared toward professional service people who understand the workings of service and dispatching and want to use it (the computer) as a tool to improve efficiency," Kilmer said.

As an efficiency improving management tool, the system generates a variety of reports and information that will help the dealership track wherever a problem may lie. For example, the computer system will show exactly what is happening at any point in the dealership on a daily, weekly or monthly basis. It will also provide readouts of what is going on in the dealership on an hourly basis.

"We can then analyze, with these reports, everything that's happening," Kilmer said.

"We can measure a mechanic's efficiency in a ratio of flagged hours to actual time and tie it with his percentage of comebacks. In this way, we can pinpoint effectiveness.

"For instance, let's say there's a guy in the shop who's turning [illegible] flagged hours during 40 actual hours. It might be great, but not if his comeback percentage is out of line," Kilmer emphasized.

The computer keeps track of the work records of the 18 people in the backshop.

Further, it can track repair orders by hour of day and can find if there are peaks in the service day. On average, 35 cars per day move through the 15 bays of the service shop.

Kilmer said the computer system doesn't impinge on human flexibility. For instance, rather than telling a service manager that a job should be done in X hours and then telling the manager that a mechanic should be done at that time, it gives the manager guidelines to follow as to when the job should be done and it alerts him if the job is falling behind.

"However, it doesn't generate a new job for a mechanic. It waits patiently until the mechanic is finished before assigning a new job," he said.

The system doesn't take away human flexibility from dispatching.

"We feel we have very professional people back there and, while we want them to do more, we also want them to provide high-quality service, which emphasizes timeliness and completeness for the customer," Kilmer said.

Just about everyone in this dealership is enthusiastic about the computer system, which now is in place throughout the store. Kilmer implemented it in stages beginning with the accounting and payroll departments and then moving it through the general office, showroom, business office, finance and insurance office, used-car sales and parts and service.

Yet, even though it was implemented in stages, when the decision was made to purchase the system, Harvey bought the whole nine yards all at once. The investment was $75,000, but Kilmer expects productivity increases and business increases to return his investment in a year or so.

Even at a 10 percent increase in the $1.5 million yearly parts and service sales, the system pays for itself, not to mention increases in other areas such as finance and insurance and car sales.

The investment in the system brought Harvey Cadillac nine computer display terminals, which are scattered through the dealership, and three printers. The system currently uses about half the capacity available, with the rest available for future expansion.

The software handles every dealership department, touches on every aspect of the dealership and impacts on just about everyone of the dealership's 55 employes, Kilmer said.

Interestingly, not only has Kilmer noted an increase in productivity, but also an increase in cooperation. For instance, as the system has been phased in, he said, those employes with experience on it have shared their experience with other personnel who are new to it.

"They point out how to handle certain functions and shortcuts and other methods of doing things," Kilmer said. "Each department has been helpful to the others in teaching the others various quirks and commands. It's been kind of a fun thing."

Now that the system is up and running, the computer search is over for Harvey Cadillac and its general manager.

Dealers

Dwight L. Lawton has been named retail development manager for the Atlantic Region, responsible for assisting dealers in the development of retail business and in sales training, merchandising and total business counseling.

Lawton previously was with Transportation Leasing Services and Geico Truck Leasing.

Allen joins Isuzu Truck as general manager

Steven M. Allen has been named general manager of Isuzu Truck of America, based in Los Angeles.

Allen joined Isuzu from Volvo White Truck Corp., where he was manager of product marketing and training. He began his truck industry career in 1967 as a district sales trainee with International Harvester.

Moran heads sales, marketing at Warn

James F. Moran has been named general marketing and sales manager for Warn Industries, manufacturer of vehicle winches and light-truck accessories.

Moran joins Warn from Sentrol, Inc., where he was vice president of sales and marketing for the electronics manufacturing firm.

Fruehauf names Kendall sales administration VP

Richard D. Kendall has been named to the newly created position of vice president-sales administration for the Fruehauf Division, Fruehauf Corp.

Kendall, who joined the firm 15 years ago, had been director marketing accounting since 1982.

Downsized '86 Jeep pickup will be called the Comanche

Continued from Page 16

best overall name in terms of appropriateness and memorability, and conveyed a rugged, off-road image," Cappy said. "And it ties in very well with Cherokee — a name we introduced 10 years ago."

He noted that the first two runnersup were names that already had an association with Jeep.

"Renegade finished second in the competition," he said. "We offered a limited-edition Renegade model in the Jeep CJ line in 1971 and it has been a regular in the CJ lineup since 1974.

"Commanche, another name we introduced shortly after American Motors acquired Jeep in 1970, was third in the evaluation."

The fourth and fifth place finishers, respectively, were Wrangler and Honcho.

"We think Comanche was a wise choice," Cappy said. "The Comanches were great hunters and warriors. They were expert horsemen—very agile and highly mobile. They traveled great distances over all types of terrain and in all kinds of weather. The Jeep Comanche pickup for 1986 will do exactly the same."

May HD surge boosts '84 tallies to four-year high

Continued from Page 16

year, both suffered losses of two percentage points in market penetration.

International's five-month count was 16,417, which accounted for 22.67 percent of the industry total. A year ago, it had 24.68 percent of the market with 11,721 tallies.

• No. 2 Ford accounted for 19.45 percent of the January-May total with 14,081 registrations. Its share was down 2.37 points from last year, when its 10,362 tallies represented 21.82 percent of the industry total.

Kenworth and White chalked up the biggest penetration gains over the five-month span.

Kenworth's share was up 2.39 points to 7.89 percent on 5,711 tallies, compared with 5.50 percent a year ago with 2,612.

White had 2,970 registrations through May, good for 4.10 percent of the total and 2.24 points higher than last year. In 1980, it took 1.86 percent with 883 tallies.

Registrations were up sharply in both Groups 7 and 8 through May. There were 24,472 tallies, 29.6 percent higher than last year's 18,883. Group 8 was up 67.6 percent, from 28,609 a year ago to 47,938.

Registrations hit 1,597,405, set 5-month record

Continued from Page 16

double the year-earlier 115 units. The Group 5 total was more than three times greater than last year, from 242 to 860. Group 6 was up 14.2 percent to 17.41, compared with 15,256 in 1978.

There were 24,472 Group 7 registrations through May, an increase of 29.6 percent over the year-ago 18,883 units. Group 8 tallies soared 67.6 percent, from 28,609 units in 1983 to 47,938.

Since 1978, there has been a dramatic shift in registrations in a number of weight groups, due mainly to the vast growth in sales of compact trucks and the trend from gasoline power to diesel in the mediums.

Group 2 was No. 1 six years ago with 937,652 registrations, more than double the Group 1 total of 423,773. This year, Group 1 was the leader by more than 200,000 units over the Group 2 tallies, 852,997 versus 637,116.

Gasoline was the popular engine in Group 6 six years ago, when 54,057 units were registered in the first five months.

Today, many more similar-sized trucks are powered by diesel, and the added weight of this engine package has moved them into Group 7, which had 24,472 tallies through May. The 1978 count was only 13,763 units.

Garage inventor may offer kit for Mercedes 500

EPA certifies 3-way catalyst system

DENVER. — The era of the garage inventor was thought to be long dead in this age of conglomerates and multi-million-dollar R&D centers.

But the ingenuity and curiosity of a one man corporation may spell a breakthrough for compliance shops throughout the nation.

Larry Kenyon, of Denver, has received EPA certification for a three-way catalyst system for the Mercedes-Benz 500, a gray-market standby in recent years, and he hopes to be able to offer the system in essentially an out-of-the-box, bolt-on kit. (Mercedes-Benz of North America began importing the 500 for the 1984 model year.)

What makes Kenyon's system different is that it is done without an air pump and retains much of the power of the European version of the 500 series Mercedes.

Kenyon's system also gets better mileage and has been rated at 19 MPG versus the 17 MPG on the U. S. version cars.

In an interview with AUTOMOTIVE NEWS, Kenyon said that his concept started in 1981 when he tried to bring a Porsche 930 Turbo into compliance for his own use.

Without benefit of an engineering background, Kenyon began his work and it was trial and error on the Porsche which essentially did not pass EPA testing.

• Kenyon's system recently passed the EPA testing. He now wants to make it available in kit form to several compliance shops. The advantage, he said, is that each car does not have to be certified individually using his system.

It essentially can be adapted to any Bosch K-Jetronic system, though Kenyon has not done development work on other makes. Now, he is sticking with the 500 series Mercedes which is the only car his system is currently certified for.

Kenyon Corp. is considered a manufacturer by the EPA, and Kenyon said that the agency has been cooperative with him.

Kenyon is not stopping with this. Within a few weeks, he will begin work on the Mercedes 280 GE, the German auto maker's 4x4 vehicle.

As for his bolt-on system, Kenyon hopes to have it in franchised compliance shops shortly.

Triex U. C. network offers consumer finance program

By Matt DeLorenzo
Los Angeles Reporter

SANTA ANA, Calif. — Triex, a national used-car dealer network that sells privately owned cars on consignment, is offering its dealers a consumer finance program that features simple interest.

Beginning July 1 and continuing for three months, the finance program will allow dealers to write 48-month contracts on dealer-owned or privately owned used cars with interest rates ranging from 14.5 to 20 percent.

Between 125 and 130 dealers throughout the country are expected to participate in the program, which is being offered by Security Pacific Credit Corp.

A Triex spokesman said the program will not be offered in California The program was tested for 90 days earlier this year here and a new finance program will be test-marketed in the state sometime this summer.

The Triex Consumer Finance Program is available only on 1980-model-year or newer cars with a minimum selling price of $6,000.

The simple interest program starts with a dealer buy rate of 14.5 percent which slides upward to 16.5 percent. A dealer buying the financing at the lower rate must write the contract at 14.5 percent, while funds purchased at the higher rate may be written as high as 20 percent.

The spokesman said that in addition to offering financing to consumers on consignment cars, the program gives the dealer another source of funds for financing dealer-inventoried used cars.

Although the program is expected to expire in 90 days, the spokesman added that Triex is committed to offering consumer financing programs as an ongoing feature of the franchise.

AWC appoints Krawisz marketing vice president

LINCOLNWOOD, Ill. — Robert E. Krawisz has been named marketing vice president of American Warranty Corp., with the responsibility of developing new marketing programs.

Krawisz formerly was marketing and pricing director of the Transportation Division, I.C. Industries.

Mazda reports 6-month records in sales, income

LOS ANGELES.—Mazda Motor Co. reported its best six-month period for sales and ordinary income in the first half of this fiscal year.

For the period ended April 30, sales totaled $3.1 billion, up 6.6 percent. Ordinary income, before taxes and extraordinary items, amounted to $105.9 million, up 8.2 percent from $97.9 million. After-tax income was $52.7 million, up 9 percent from $48.4 million.

Mazda said domestic factory unit sales totaled 188,836, down 7.8 percent with passenger car sales showing the biggest drop. Exports, meanwhile, showed a 3.5-percent increase.

VWoA confirms German name for next Rabbit

TROY, Mich.—Volkswagen of America has made it official: Its Rabbit successor will indeed be called the Golf.

VWoA said the name change reflects the fact that the car is virtually identical to Golfs made in Germany and six other countries.

The name alludes to the Gulf Stream, which in German is Golf-Strom, a company spokesman said.

Production of two-door and four-door models is to begin in August at Westmoreland, Pa. Sales will start in mid-November. A German-built Jetta derivative also is due this fall.

Rabbit successor moves along line

Production supervisors and assemblers check written job procedures and assembly techniques on Volkswagen's all-new successor to the Rabbit. The car will be called the Golf and will be built in Westmoreland, Pa. It goes on sale in mid-November.

Promises product improvements, new models through 1989

Peugeot to capitalize on sales hike

By John A. Russell
New York Staff Writer

LYNDHURST, N. J. — Peugeot Motors of America is promising continued product improvements and new models through 1989 as the company gears to capitalize on its increasing sales.

Pierre Lemaire, president of the company, said there will be some type of "product event" every year. He said that it would not only be new models, but also new engines, transmissions and other improvements. He would not go into detail on any of the company's new-model plans, however.

This year, Peugeot is enjoying the most successful year in its history in the U. S. For the first six months, Peugeot sales were up 30 percent.

According to both Lemaire and Jim Fitzhenry, general sales manager, the company anticipates ending this year above the 20,000 mark which will mean a 35 to 36 percent increase over 1983.

Fitzhenry views this as critical since it would be the first time the company has broken that barrier and will set the stage for further sales increases. Peugeot is targeting 25,000 sales for 1985 and in excess of 30,000 for 1986 and 1987.

The sales surge has continued since the '84 introduction last fall when the 505 station wagon debuted. Wagon sales have jumped from 3 percent of the total to 23 percent and, Fitzhenry added, "we may have only scratched the surface" with the wagons.

• This year, the 505 turbo gas model will be introduced and according to Lemaire, this model "makes a clear statement we're here to stay."

Also slated for '85 introduction is a larger diesel power plant. Lemaire said the 2.5 liter turbodiesel would replace the 2.3 liter that was used in the past.

Fitzhenry said this increased capacity would give better performance and make the models more appealing to the diesel buyer.

While diesel sales are holding at the 20 percent mark for Peugeot, both men believe in future years it will be a 15 to 18 percent share. Neither thinks there will be a surge in diesel sales in the future such as that which occurred a few years ago, however Peugeot will offer diesels.

The Peugeot sales increases have been accompanied by internal changes to strengthen the organization.

Recently, the technical and service departments were brought under one manager. George Blinn, formerly with BMW, was appointed national service and technical manager. Both departments will report to him.

Lemaire said this is a reinforcement of service and more effort will be placed in this area. The service organization was revamped to strengthen the service support functions to the dealers and customers.

In addition, several changes have been made in the marketing division of the company.

Edward Blunt, formerly with Volvo of America, was appointed national marketing manager responsible for distribution, dealer development, business management, market planning, manpower development and overseas delivery.

Richard A. Smiley was appointed market development manager. He had been a district sales manager for the Eastern zone of Peugeot and later was business management manager.

Rodger Doran was named business management manager after holding the position of training coordinator in Peugeot's manpower development department.

Fitzhenry said the changes were made to make the organization more responsible to dealers.

Both Lemaire and Fitzhenry had praise for the dealer organization. Dealers are aware that Peugeot is on the move, they said, and they agreed that dealers generally are making the necessary commitments to the marque.

Both men feel the management is showing dealers the company is making the commitment. The field staffs have been strengthened in addition to headquarters positions.

Beaman dealership adds Rolls-Royce

NASHVILLE. — Beaman Pontiac-Toyota-Isuzu here has been awarded a Rolls-Royce franchise.

Paul Gurley has been named executive director for the franchise and will be responsible for marketing and customer satisfaction programs.

Bus barn becomes body shop

The Tucson Transit System's old bus barn has been put back in service under new management. Don Mackey Oldsmobile-Cadillac, Inc., has acquired the site — three blocks from the dealership — and reopened it as its body shop. The four-acre facility, built in 1947, has been refurbished to provide 15,000 square feet of working space for a crew of nine workers. The shop handles all makes, including imports. Above, Joe Villasenor, painter, prepares an Oldsmobile front header panel for painting.

Savage explains his method

New approacn offered to train salespersons

By Jenny L. King
Staff Writer

Tough management doesn't work.

This is the premise of the new sales training approach developed by Brian Savage for Tom Williams & Associates, a one-year-old consulting company affiliated with Tom Williams, a Buick, Cadillac and Dodge dealer in Birmingham, Ala.

"Our program is radical, it's novel," said Savage, a 19-year auto industry veteran who is responsible for this approach to sales training.

"People now are buying cars, they are not being sold to as they were in the past," he said. "Our two major points are that today's new car buyer is smarter than past buyers and that the salesperson should not be subjugated by the archaic tough management system that prevented him/her from developing a good relationship with the customer."

Savage claimed that the selling technique which puts the dealership hierarchy in control of customers is no longer valid. He even went so far as to declare that buyers will pay $100 to $150 more for a car to deal with a company that treats them well before, during and after the sale.

Not only are the old selling methods obsolete, said Savage, but dealership recruiting practices must be changed. "Most companies look for persons who will be assets — dealerships should, too," he said.

He discourages the use of help wanted ads, especially those that invite applicants with no prior sales experience. A dealer should look for the best available talent, he insisted.

• Savage's idea is for dealership management to train its salespeople in all facets of sales, service and finance of a new car. He will instruct dealers in a two-day seminar that covers the products inside and out, plus provide information on service, parts ordering, finance and insurance.

"We attempt to de-program the dealer: We demonstrate the rights and wrongs as we see them. And we think the sales staff should be trained by its own management — eventually they all must work together, so this is logical," Savage said. He also said members of his staff could come into a dealership and handle the training.

"We want to make the dealership a better place in which to work," he said. "We have ideas for changes in many areas. In addition, we offer a three-hour workshop for dealership department heads who can then do more training of salespeople on the job."

Savage is pitching his money-back guarantee training program to the car makers themselves. He said he has talked with General Motors research and development and marketing people. They showed considerable interest, he said. Starting at the top is a more efficient approach than approaching individual dealers, he said.

The old sales methods just don't work today, according to Savage. Both the customer and salesperson must be seen as individuals who need to express themselves.

Savage's method includes at least three follow-up telephone calls from sales professional to new car buyer. The first contact is made three days after delivery, the second and third in one-week intervals. The primary purpose is to find out if the new car is performing well.

A secondary, but important, reason is to seek referrals from the customer. This, said Savage, is never done before the third conversation.

"The methods work so well that our (Wiliams) dealerships advertise less than the average," he said. Repeat customers and referrals make the difference, he said.

Chrysler assigns ad accounts to Ross Roy agency

DETROIT. — Joseph A. Campana, Chrysler Corp. marketing vice president, announced today that several corporate advertising accounts are being assigned to Ross Roy, Inc.

Included are Chrysler Marine, Chrysler Service and Parts Operations, Chrysler Fleet Operations, the Chrysler Institute and Chrysler Diversified Operations.

The latter includes Trenton Chemical, Amplex, Sandusky Vinyl Products and Huntsville Electronics. Billings are estimated at $2 million to $3 million annually.

Ross Roy has worked with Chrysler on a variety of accounts since 1927.

Chevy, Pontiac plan series of showroom dates

Continued from Page 1

is looking at a Sept. 27 introduction, though that may change.

Ford has no inclination to alter its intro date, but there is a possibility it may do so if it turns out to be the strike target, according to a company source.

Chrysler will introduce all its products on Oct. 4, except for Lancer and LeBaron GTS which will come later. The first production of Lancer/LeBaron is slated for Sept. 17.

American Motors is introducing all cars and Jeeps Oct. 1.

And Volkswagen is introducing in early November. It has no definite date yet.

Car registrations reach five-year high during May

Continued from Page 8

dropped to 10.42 percent from 13.83 percent of the market, and the imports dropped to 22.44 percent from 26.40 percent.

Excluding imports, subcompacts accounted for 15.89 percent of the May market, compacts had 24.72 percent, intermediates had 35.69 percent, standards had 13.44 percent and luxuries had 10.26 percent.

Registrations for the first five months of 1984 were up 20.57 percent from the preceding year and were 33.55 percent atop 1982 figures. New-car registrations through May reached 4,087,560 this year compared with 3,390,119 in '83 and 3,060,751 in '82.

Domestic registrations were up 28.03 percent for the period, to 3,113,080 from 2,431,488. It was a climb of 42.34 percent from 2,187,094 two years ago.

• Through May of this year, the import share of the total market was down 4.44 percentage points, to 23.84 percent from 28.28 percent.

As was the case for May, Ford and GM made inroads into the market for the five months. Ford was up 2.55 percentage points, to 19.04 percent from 16.49 percent. GM gained 3.03 percentage points, claiming 45.96 percent of the total compared with 42.93 percent in 1983.

Chrysler was down 0.54 percentage points, to 9.31 percent from 9.85 percent; AMC was down 0.59 percentage points, to 1.85 percent from 2.44 percent, and miscellaneous domestics dropped to 0.00 percent from 0.01 percent.

Excluding imports, GM held 60.35 percent of the five-month market, up from 59.86 percent in 1983. Ford was up to an even 25.00 percent from an even 23.00 percent. Chrysler slipped to 12.22 percent from 13.74 percent. American Motors dropped to 2.43 percent from 3.39 percent, and miscellaneous domestics (108 vs. 341) were gone, down from a miniscule 0.01 percent.

Chrysler earns $802.9 million, alltime record

Continued from Page 2

over, we were $3.5 billion in the soup."

The other three U. S. auto makers are expected to announce their second quarter earnings late this week.

Analysts predict General Motors will report earnings of $1.3 to $1.6 billion. Ford's will be $900 million to $950 million, and American Motors will show only a slight profit at best.

Meanwhile, Iacocca refused to reveal how much of a bonus he was awarded. Chrysler shareholders in June approved $51.6 million for bonuses, and the board of directors recently approved bonuses for 1,440 Chrysler executives.

"The board decided they would take a substantial chunk cut of the $51.6 million . . . They literally took millions out of the pie and put it in escrow for other things," Iacocca said. "They came up with a sensible, sane plan for executive compensation."

Details of the plan will be revealed in the 1984 proxy statement, which comes out next spring.

Vermont import dealer wins AIADA award

WASHINGTON. — Kurt Gerrish, owner of Gerrish Motors, Inc., Woodstock, Vt., has been named winner of the 1984 AIADA-Sports Illustrated Dealer of Distinction Award.

The American International Automobile Dealers Assn. presented the award. Gerrish handles Mercedes-Benz, Honda, Porsche, Audi and Volkswagen. He has been in the imported automobile business for 20 years.

AIA asks court to review passive-restraint ruling

Continued from Page 1

6 when the rule would be "issued," the government failed to respond.

Therefore, State Farm and NAII made its series of filings to cover what it calls "relevant" acts: A morning period when Secretary Dole signed the standard; distribution to the press shortly before the noon press conference; Dole's statements, including reading of the release to the press, and the posting at the office of the Federal Register before 12:30 p.m.

• The question of jurisdiction will not be decided until either the government decides where to file its record or one of the courts decides which one is to get the government record. But only one court will handle the issues.

AIA counsel Milton D. Andrews, of Schnader, Harrison, Segal and Lewis, in a brief filed July 17, said that two years is a very short time to redesign a vehicle and retool a plant.

Moreover, he said, the time will actually be less because the test procedure is not yet entirely final. Thus, the importers cannot complete their redesign and cannot be sure of compliance without final test procedures.

But, the brief continued, even if the importers could comply in time, it is doubtful that the court will decide the issue on its merits in time to allow the companies to avoid the "enormous monetary burdens of compliance."

That burden is "especially severe" because of limited lines of models, "sometimes only one or two."

Thus, they cannot easily designate a separate model line representing only 10 percent for passive restraints. "Once they begin to equip some cars with these devices, they will necessarily have had to redesign a major part or even all of their fleet," the brief said.

AIA suggested a specific schedule for the court's expedited action: Aug. 6, NHTSA files the record with the court; Aug. 27, petitioners' brief due; Sept. 12, respondents' brief due, and Sept. 21, petitioners' reply brief due. Oral argument would be "as soon as possible thereafter."

The "final" Standard 208 — which has already weathered court tests in the Sixth and D.C. circuits — would require front-seat passive-restraint protection for 10 percent of all new cars built for sale in the U.S. after Sept. 1, 1986; for 25 percent after Sept. 1, 1987; for 40 percent after Sept. 1, 1988, and for all built after Sept. 1, 1989.

But the standard would be rescinded if states accounting for two-thirds or more of the U.S. population have enacted mandatory seat-belt-use laws, meeting certain federal criteria, by April 1, 1989, and in force by September, 1989. Automatic belts, air bags, or forgiving interior could meet performance requirements.

The import companies in court in the Ninth Circuit sell the following makes: Alfa Romeo, Honda, BMW, Fiat, Isuzu, Jaguar, Lotus, Mazda, Mitsubishi, Nissan, Peugeot, Rolls-Royce, Saab, Subaru, Toyota and Volvo.

Consumer group can't enter suit on GM-Toyota

WASHINGTON. — U. S. District Judge Thomas Hogan has ruled that Consumer Federation of America (CFA) will not be allowed to intervene in the Chrysler Corp. suit against General Motors and Toyota.

An October court date is possible for the suit, which challenges the legality of the GM-Toyota joint venture. CFA, which has charged that this action will result in higher car prices for consumers, may still file friend-of-the court briefs.

Since last May, when Hogan ruled that Chrysler had standing to sue, Chrysler has been in the midst of extensive discovery.

Chrysler claims it is threatened by such joint action between the world's largest and the third-largest auto companies and that the deal is illegal under the antitrust laws because of the potential for price-fixing.

Makers assemble 139,153 cars for week

Ford's return boosts auto output

By Joe Wilssens
Staff Writer

U.S. auto production was back at normal summer levels last week as Ford Motor Co. workers returned to their jobs following two weeks of vacation.

Domestic auto makers slated assembly of 139,153 cars last week, 19.96 percent greater than 115,996 completed the previous week and 11.44 percent better than the year-ago week's 124,870.

Year-to-date, 4,611,962 cars have been built in the U.S., 26.62 percent ahead of 3,642,483 finished at this time last year.

Of last week's estimated car production, General Motors accounted for 60.11 percent of the U.S. output followed by Ford, 22.10 percent; Chrysler Corp., 12.18 percent; American Motors, 3.45 percent, and Honda, 2.16 percent. Volkswagen of America remained idle last week for model changeover.

Four auto assembly plants were down last week for model changeover and six facilities reported Saturday overtime.

Idle assembly plants were Ford Lorain (O.), Chrysler Jefferson (Detroit), Volkswagen Westmoreland (Pa.) and GM Janesville (Wis.).

GM led the overtime list with five plants reporting extra hours. The company's Doraville (Ga.), Flint B and G lines, Lordstown (O.) and Van Nuys (Calif.) plants worked Saturday (July 21).

Ford's Wixom facility was the only other plant scheduling Saturday overtime.

Ford expanding Lima plant for '86 Taurus V-6 engine

Ford Motor Co. is nearing completion of a new structure at its Lima (O.) engine plant that will house production of a 3.0-liter, V-6 engine to be used on the 1986 front-wheel-drive Taurus.

The addition is due to be completed in September, according to a Ford spokeswoman. Tooling will follow and production of the V-6 is expected to begin in mid-1985. Construction of the Lima addition started in July, 1983.

The one-story addition is located adjacent to the existing plant. The new structure was designed in a way that has permitted uninterrupted operation of such main plant services as steam, compressed air and primary electric during construction.

Lima currently turns out a 2.3-liter, four-cylinder overhead-cam engine used in the LTD, Marquis, Mustang, Capri and Ranger truck models, and the 2.3-liter, four-cylinder high-swirl carburetion engine for Tempo and Topaz. The plant also builds engines for light, medium and heavy-duty trucks.

The new V-6 reportedly embodies advanced technology, design and manufacturing processes. It is Ford's first V-6 for front-drive application.

Earlier this year, Ford announced plans to spend $336 million to modernize, expand and retool its Chicago and Atlanta assembly plants for Taurus production. Work is due to be finished by June, 1985, and assembly of the new car is slated to begin in late summer, 1985.

The 106-inch wheelbase front-drive car is expected to be marketed in its first year as a four-door sedan and four-door station wagon.

California cattlemen may 'brand' vehicles

SACRAMENTO.—The California Assembly has approved and sent to the Senate a bill which would permit cattle ranchers throughout the state to brand their automobiles and trucks.

The bill would authorize the owner of a registered cattle brand to have that brand inscribed on vehicle license plates for a fee of $75 to $85. The special brand would be printed in red and be placed to the right of a five-digit license plate number.

Truck production rises as 3 firms finish vacations

Domestic truck production rebounded last week as vacationing workers at Ford Motor Co., Jeep and International Harvester returned to assembly lines.

U.S. makers projected completion of 62,439 trucks last week, 67.69 percent greater than the previous week's 37,235 and 30.95 percent better than 47,682 completed during the year-ago week.

So far this year, 1,750,207 trucks have been built in the U.S., 39.81 percent ahead of 1,251,816 finished during the comparable 1983 period.

Five truck assembly facilities worked extra Saturday (July 21) hours last week.

General Motors topped the overtime list with four plants scheduling extra hours. GM's truck facilities at Detroit, Lordstown (O.) and Pontiac plants No. 5 and No. 6 worked Saturday overtime.

Ford's Kansas City plant was the only other facility reporting Saturday overtime.

Car-truck output falls in Canada: summer to blame

The dog days of summer have hit the Canadian auto and truck producers. Summer vacations and model changeovers kept assembly totals well below normal levels last week.

Canadian makers projected assembly of 12,610 cars last week, down 4.46 percent from the previous week's 13,198 and 2.93 percent below the year-ago week's 12,991. Vacations at Ford Motor Co. and changeover at American Motors contributed to the meager build.

Year-to-date, 630,014 cars have been built in Canada, 10.20 percent greater than 571,720 finished during the same 1983 period.

Canadian truck manufacturers scheduled 5,680 units last week, 53.84 percent below the prior week's 12,306. Last week's build was 52.24 percent above the year-ago week's 3,731.

So far this year, 464,077 trucks have been assembled in Canada, 57.08 percent greater than 295,434 assembled during the same 1983 period.

Ford's Oakville (Ont.) and St. Thomas (Ont.) plants were idle last week for the second of two weeks of summer vacation.

Chrysler Corp.'s Windsor (Ont.) T-115 assembly plant also was idle for the first of two weeks of vacation.

General Motors was the only company reporting overtime last week. The company's Oshawa (Ont.) plants No. 1 and No. 2 worked Saturday (July 21).

59th year—$40 per year, $1.00 per copy

Hello, Eldo

Jim Dunne

Cadillac's personal luxury car reworked

The all-new Cadillac Eldorado, due as an '86 model, will abandon today's notchback styling and shed 600 pounds. Wheelbase will shrink from 114 to 108 inches, length from 204 inches to about 184. Engine placement will be switched to east-west. Choices: 4.1-liter aluminum V-8 offered in the new Coupe DeVille or a V-6 diesel.

July 1 count is 10,880, highest in 2 years

Import-dealer total rises

By Kathleen Hamilton
Assistant Managing Editor

The number of import-car dealers in the U. S. rose during the first half of the year to 10,880, the highest total in two years.

The increase mainly was the result of the addition of the Japanese-built Suzuki Sprint to Chevrolet's lineup at Western dealerships.

Increases in the Plymouth and Dodge dealer networks also expanded the import-dealer total because all are eligible to sell the Mitsubishi-built captive imports.

The only other significant numerical increase this year came from International Automobile Importers' growing network for its Pininfarina and Bertone-built Italian sports cars. But they added few new dealers to the bottom line because most are dualed with existing dealerships.

Newcomer to this year's census is Lamborghini, with its factory-authorized importer-distributor in Carson City, Calif. For years, the $100,000 Italian performance cars were imported through the so-called gray market, with independents bringing them up to federal emissions and safety regulations.

Some other low-volume importers of exotics also beefed up their dealer numbers in early 1984: Lotus, Maserati and Alfa Romeo. In fact, 13 importers increased their dealership totals, compared with six that lost dealers and six that saw no change.

• The July 1 import dealership total of 10,880 was up 784, or 8 percent, from 10,096 at the start of the year, the latest Automotive News dealerships census showed.

The only category in which there was a decline was in the number of import-only duals. There were 1,041 at midyear—89 fewer than when the year began. As a result, the number of dealers carrying only imports fell by seven to 3,873.

The decreases in import duals were widespread and small.

On the other side of the coin, single-line import dealers increased by 82, to 2,832. It was the largest number of exclusives since the census of July, 1981.

Honda, which has been steadily increasing its portion of exclusives for several years, increased its number of exclusives by 28 since the start of the year. Honda exclusives were up by 10, Mercedes-Benz, by seven, and BMW, by six.

The 10 import lines with the most exclusives were Toyota, 662 exclusives, representing 61 percent of its dealer network; Nissan, 637, for 58 percent; Honda, 472, for 57 percent; Subaru, 305, for 38 percent; Volvo, 120, for 30 percent; BMW, 116, for 28 percent; Mazda, 110, for 14 percent.

Also, Mercedes-Benz, 102, for 25 percent; Mitsubishi, 82, for

UAW presents stiff demands as talks begin at GM, Ford

By Marjorie Sorge
Labor Editor

Contract talks between the UAW and Ford Motor Co. and General Motors began in Detroit last week on a cooperative note even though the union asked GM for substantially more input into its decision making process and prior approval on outsourcing.

The UAW asked both Ford and GM for seats on their boards of directors when talks opened Monday (July 23) at GM and Tuesday (July 24) at Ford.

The union has also indicated previously it would like seats on Ford's Operations Committee and GM Administration Committee. Those committees make major operating decisions and a seat there would give the UAW more input into the everyday operations of the companies.

Job security is also a major issue. The UAW wants GM to have its suppliers provide reciprocal preferential hiring rights for workers laid off from the company or its other suppliers. It also wants GM to institute a program of "conversion planning" to create non-auto jobs to replace auto jobs which may be permanently lost.

• Other initial UAW demands at GM include substantial wage gains, health care increases, more paid time off and pension increases. GM's chief negotiator, Alfred S. Warren Jr., industrial relations vice president, said those demands would hurt GM's competitiveness.

"If we gave all those things, it would be beyond our ability to be competitive," Warren said.

"I don't know at this time if they (the demands) are unrealistic. But if somebody said to me 'Will you grant all of those demands?' it would seem that that would be an expensive package."

Peter J. Pestillo, Ford's chief negotiator, said the average Ford production worker had a payroll W-2 of more than $34,000 for 1983.

"You have expressed a need for job protection, and we understand and accept the challenge," he told the UAW on opening day. "We have repeatedly recited the need to be competitive and you understand. The two are inextricably intertwined. The only secure company or job is a competitive one."

Position papers were also presented to Ford last week but they were not made available to the media.

UAW Vice President Stephen P. Yokich, director of the Ford department, said the union presented demands to restrict overtime, control outsourcing, increase wages, improve cost-of-living adjustments (COLA) and improve pensions, among others. He would not say whether the union's Ford proposals were similar to those put on the table at GM.

Talks at Ford began on a cor-

Anti-subsidy measure clears its first hurdle

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—NADA has guided its revised fleet/lease anti-subsidy bill through its first step forward.

A House subcommittee chaired by Rep. James J. Florio, New Jersey Democrat, reported the somewhat amended substitute (akin to the Senate version) to the full House Energy and Commerce Committee where it awaits further questions from the chairman, Rep. John Dingell, Michigan Democrat.

But since no Senate action can be expected this year, it apparently will die at the end of this Congress — only to be resurrected at the start of the 99th Congress.

NADA President James P. Jennings said, "The legislation has been studied very carefully and refined to accommodate changes suggested by congressmen. We now have an excellent product for consideration by the Energy and Commerce Committee."

During markup, Rep. Wayne Dowdy, Mississippi Democrat, offered the latest version which attempts to cure defects which surfaced during hearings on an earlier revised House version fathered by Rep. Gene Taylor, Missouri Republican, who is a former Ford dealer.

The intention is to "protect consumers and franchised automobile dealers from unfair price discrimination in the sale by the manufacturer of new

breaking news

VWoA plans half capacity for another year

LEXINGTON, O. — Volkswagen of America will run its Westmoreland (Pa.) assembly plant at half capacity for another year and may eventually produce the new Golf's upscale relative, Jetta, there, according to VWoA President Noel Phillips. Phillips, speaking to reporters following previews of the new cars, said new automation at the plant would also eliminate the need for approximately 300 hourly workers. The Westmoreland facility has operated at half capacity or less since the middle of 1981.

GM profit a second-quarter record

DETROIT.—General Motors set second-quarter records with net income of $1,609 million and sales of $21.6 billion. Profit was up 54.3 percent from last year's $1,043 million, and sales rose 11.3 percent from last year's $19.4 billion. It wasn't quite GM's best any-quarter profit; that laurel belongs to the first three months of this year when net income was $1,614 million. GM did set a first-half record with net income of $3,223 million on sales of $44.5 billion. The former first-half records were set in 1979 when net income was $2,445 million and sales were $36.9 billion.

Automotive News Week is set for Aug. 26-30

Program is completed for World Congress

Automotive News Week in Detroit will begin Aug. 26 when Paul Tippett, chairman of American Motors, delivers keynote remarks at the ninth annual Automotive News World Congress.

Automotive News Week will be observed Aug. 26-30, with the World Congress in session Aug. 26-29 at the Westin Hotel and the third annual Automotive News World Expo open Aug. 28-30 at nearby Cobo Hall.

Following Tippett on the speaker's dais during the four-day industry seminar are 33 other top-level decision makers from inside and outside the industry. (See accompanying box.)

At World Expo, suppliers and would-be suppliers from around the world will show and sell automotive components, materials and services, while many of the world's leading vehicle makers will staff buying offices on the show floor.

Visitors to World Expo will be eligible to win a free trip to Hawaii.

Registration fee for World Congress attendees is $490, the same as last year. The fee includes: Access to 34 sessions, early morning coffee and rolls; two luncheons, three dinners, including a Tuesday Gala; a detailed workbook; hosted cocktail receptions, and entry to the World Expo.

If a registrant's plans change, the name of another individual may be substituted at any time prior to the opening. Full cancellation will be charged $100.

Automotive News is offering World Congress attendees a full refund of the $490 registration fee if they are not entirely satisfied.

World Congress doors will be open Aug. 28 for the Tuesday Evening Gala, at which non-registrants will join seminar attendees for an industry extravaganza.

The event includes two top-flight speakers, a cocktail reception and a three-course dinner.

Tickets to the Gala for non-registrants are available in advance only, on a first-come, first-served basis. To receive tickets for the Gala, mail in the accompanying coupon.

For further information on World Congress and World Expo, mail in the accompanying coupon or contact Automotive News Week: Telephone — (313) 567-9520; cable address — TWX 810 221 5122 AUTNEW.

Mail this coupon to:
Automotive News Week
965 E. Jefferson Ave.
Detroit, MI 48207

Yes! Please reserve tickets at $38 per person for the TUESDAY EVENING GALA at the Westin Hotel, Detroit, Aug. 28.

Individual tickets or

Tables for ten

For table reservations, please indicate:

Number of World Congress registrants at table (additional tickets not necessary)
Number of non-registrants at table (tickets needed)

Company name for table sign:
(Complete only if reserving a table)

Ronald F. Pink, manager, vehicle fleet business, Xerox Corp.

Dean F. Poeth, projects manager, Engineering and Manufacturing Technology Dept., Batelle Memorial Institute.

J. D. Power, president, J. D. Power & Associates.

Kjell Qvale, chairman, British Motor Car Distributors, Ltd.

Marvin T. Runyon, president and chief executive officer, Nissan Motor Mfg. Corp., USA.

Barbara Sanders, director, Advance Product and Manufacturing Engineering Staff, General Motors.

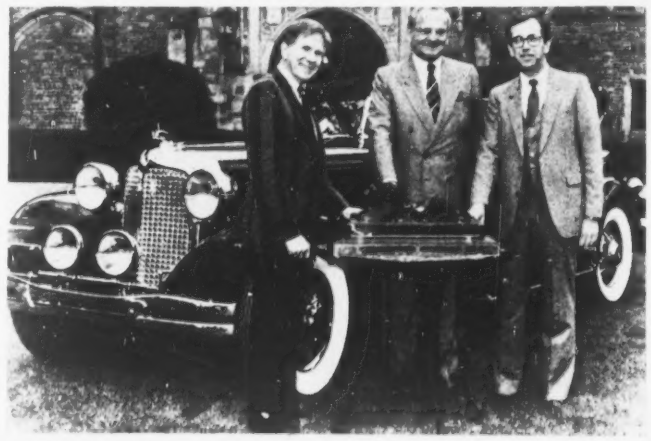
Diane K. Steed, administrator, NHTSA.

Morris Tanenbaum, chairman and chief executive officer, AT&T Communications.

Paul Tippett, chairman and chief executive officer, American Motors.

Tatsuro Toyoda, president and chief executive officer, New United Motor Mfg., Inc.

Edson P. Williams, general manager, Ford Truck Operations.



Two Chrysler classics

Chrysler Corp. Chairman Lee Iacocca, center, and a 1931 Imperial 8 Custom Phaeton are part of the 1984 Meadow Brook Concours d'Elegance to be held Aug. 5 in Rochester, Mich. Also shown are Robert E. Larivee Sr., left, president of Group Promotions, and Joseph Champagne, president of Oakland University, site of the annual event.

Jaguar valued at 400 million as sale of stock begins

LONDON.—Jaguar has been valued at just under $400 million for the purposes of its separation from state-owned BL and its own listing on the stock exchange here.

Nearly 178 million ordinary shares, with a value equivalent to $2.20 each, will be on offer from today (Monday) until Friday (Aug. 3). The relatively modest valuation is expected to lead to a full subscription by institutions and particularly private investors.

Jaguar is the first arm to be lopped from BL, but others will follow. The next most likely candidate is component maker Unipart, with a possible sale during 1985.

Details of the Jaguar sale, conceived by BL and its financial advisers, Hill Samuel, were revealed last week. Hamish Orr-Ewing, the new chairman of what is now Jaguar PLC, called the offer "extremely well balanced."

The issue price of 165 pence each capitalizes Jaguar at 297 million pounds ($395 million).

The terms of the sale prevent any shareholder buying more than 15 percent of the company over the next six years. In addition, the government has reserved a defensive shareholding to prevent unwelcome takeover bids until the end of 1980.

Vendors note auto makers' surging profits

GM pressures suppliers for price rollbacks

By Richard Johnson
Staff Writer

Some General Motors suppliers are apparently bowing to pressure from the auto maker to either lower or hold the line on 1985 model year prices, but not without some "gnashing of teeth," according to one parts company official.

Meanwhile, discussions with several vendors regarding 1985 sourcing contracts are said to be stalled on the question of price reductions.

Earlier this year, Buick and Chevrolet sent letters to many of their suppliers asking that component prices be reduced at least 3.3 percent annually during the next three years to reflect gains in productivity.

Three-year contracts were offered in some cases if suppliers agreed to drop prices by as much as 5 percent annually. Increases attributed to higher raw material costs are being absorbed by the manufacturer.

The pressure for rollbacks drew strong reaction from vendors, most of whom were forced to hold prices throughout the industry recession.

Critics also noted surging GM profits and said their ability to cut prices depends in part on how the corporation handles contract negotiations with the UAW this summer. The auto pact will likely set a pattern for parts industry labor contracts, according to suppliers.

• A survey of industry suppliers suggests that parts makers are going along with the reduc-

Continued on Page 21, Col. 1

As talks open at GM and Ford

UAW presents strong 'want' list

Continued from Page 1

dial note when Chairman Philip Caldwell met with the bargaining teams at the opening session. GM Chairman Roger B. Smith did not make an appearance at the table.

UAW's Yokich said it was "nice" of Caldwell to stop by and that that kind of approach will help the two sides reach an agreement without a strike.

UAW President Owen Bieber said Caldwell addressed the need to work together and the need for the union to be in on the decision-making processes at Ford.

• One of the UAW's major demands at both companies involves limiting outsourcing. One of the initial demands is for no outsourcing without prior approval of the union.

The union also asked for an annual ceiling on the number of cars GM can import in relation to domestic sales with separate limits on the number of components imported. It wants this arrangement extended beyond the length of the agreement.

Other job security demands at GM include:

1. No layoffs because of outsourcing.

2. Extending the Pilot Employment Guarantee Project to all plants. That plan assures 80 percent of a plant's workforce guaranteed employment.

3. An assurance that new technology would not result in the erosion of a bargaining unit.

4. Long-term commitments from GM to modernize and upgrade plants and equipment in the U. S. and Canada.

5. The newest angles on job security are the conversion planning proposal and reciprocal hiring rights with suppliers.

Conversion planning, which would require GM to create non-auto jobs to replace lost auto jobs, seems to be in direct line with GM's plans to diversify into non-auto business.

GM is planning to put about 10 percent of its business in non-auto fields over the next few years.

Getting suppliers to hire laid-off GM workers does present some problems. Most supplier companies pay less than the $12.67 an hour (including $3.04 COLA) that workers currently make at GM. The UAW has long been opposed to multi-tier wage systems.

The preferential hiring plan is an "interesting concept," Warren said, and "it deserves consideration."

Regardless of the issues and demands, both the companies and the union agree that the 1984 talks probably will be the toughest ever.

"I don't think there's any question that they'll be very, very tough negotiations, probably the toughest negotiations that our union has ever faced," Bieber said.

"We look at these negotiations in the same way," Warren said. "When (Bieber) says tough, the toughness is not the attitude of the participants but the toughness of the problems. We both need solutions relating to job security, job security in relation to wages, competitiveness in relation to wages."

Joe Wilssens

GM and UAW open negotiations

General Motors and the UAW opened contract talks last week with the traditional handshake across the main bargaining table. UAW President Owen Bieber, left, shakes hands with GM's chief negotiator Alfred S. Warren, industrial relations vice president. The UAW is expected to ask for significant wage gains. The union's major demands also include job security and limiting outsourcing.

New era in labor relations: Pattern bargaining waning

By Marjorie Sorge
Labor Editor

The auto industry is on the threshold of a new era of labor relations, an era that could mark the end of traditional pattern bargaining.

Contract talks between the UAW and the Big Two, Ford Motor Co. and General Motors, opened last week with the usual pomp and circumstance. But beyond all that, both sides must realize that bargaining cannot follow the old rituals.

The union will face off against two auto makers with different approaches to achieving the same goal of world auto market dominance. While the two contracts could still expire at the same time, the result could well be the death of traditional pattern settlements and the birth of a new tactic of tailor-made settlements to fit the individual company.

News Analysis

Since the days of Walter Reuther, the UAW has approached negotiations in a simple way: The union picks a "target" company as the contract expiration date nears, concentrates its bargaining with the target and, if negotiations fail, strikes only the target company.

It attempts to whipsaw that company into accepting a tough contract under the duress of seeing its competitors still building and selling cars while the target's plants are idle.

Once the union has the settlement, it then goes to each of the other car makers in turn with a "pattern," expecting — and getting — a similar settlement.

The pattern settlement has been strained for some time as first American Motors and then Chrysler Corp. were excused due to delicate financial health. Although the union may refuse to admit it, 1984 could permanently mark the end of the current method of pattern bargaining.

• The UAW is now trying to get Chrysler back on the pattern, at least hoping to get the contract to expire at the same time as the Big Two. In light of Chrysler's record profits, UAW President Owen Bieber

Car sales climb 13 pct. to 233,826 for mid-July

By Jenny L. King
Staff Writer

U. S. auto makers made it four periods of sales gains in a row with their 13.03 percent increase in mid-July, and year-to-date sales continued to stretch up from 1983, growing 26.29 percent to 4,659,195 compared with 3,677,507.

July 11-20 new-car sales of 233,826 were up 30.61 percent from 179,026 in the preceding period and were up 13.03 percent from 206,875 in the corresponding period a year earlier.

With nine selling days this year and last, the daily rate likewise was up 13.03 percent, to 25,981 from 22,986.

Ford Motor Co. reported the largest sales increase of the Big Three. Ford was up 21.73 percent, to 53,219 from 43,718 a year ago. General Motors was up 10.58 percent, to 139,587 from 128,390, and Chrysler was up 9.04 percent, to 28,791 from 26,403.

For the period, American Motors was up 63.60 percent, to estimated sales of 7,280 from 4,450. Volkswagen reported sales of 2,216 Rabbit sedans, up 5.62 percent from 2,098, while Honda sales grew 50.50 percent to 2,733 from 1,816.

GM's share of the domestic market dropped to 59.70 percent from 62.06 percent in mid-July last year. Ford was up to 22.76 percent from 21.13 percent. Chrysler had 12.31 percent, down from 12.76 percent. AMC claimed 3.11 percent, up from 2.15 percent, VW was off to 0.95 percent from 1.02 percent and Honda held 1.17 percent, up from 0.88 percent a year earlier.

At Chrysler Corp., Plymouth was off 9.28 percent for the period, while Chrysler was up 37.44 percent and Dodge was up 3.45 percent.

Ford was up 17.84 percent, Mercury was up 23.50 percent and Lincoln was up 57.19 percent.

All GM divisions reported gains. Chevrolet was up 18.86 percent in mid-July, Pontiac was up 11.44 percent, Cadillac was up 6.06 percent, Oldsmobile was up 1.13 percent and Buick was up 0.67 percent.

AMC's Eagle sales were down an estimated 62.96 percent and Renault Alliance/Encore totals were up an estimated 118.71 percent.

July 11-20 sales were moving at a rate capable of producing a 7,896,000 domestic total for the 1984 calendar year.

U. S. INDUSTRY TOTAL	233,826	206,875

†--Estimate

UAW demands at GM

Job security

• GM to create non-auto jobs to replace auto jobs which may be permanently lost.

• GM to arrange with its suppliers to provide reciprocal preferential hiring rights for workers laid off from GM or its other suppliers.

• Expanding the Pilot Employment Guarantee Project to all plants. That plan, which provides 80 percent of a plant's workforce with guaranteed jobs, was negotiated in 1982 and was to begin at four pilot plants. None were ever developed.

• Improvements in the Guaranteed Income Stream program which provides high-seniority laid-off workers with a portion of their income until they retire or find new jobs.

Outsourcing

• No outsourcing without prior union approval.

• An annual ceiling on GM's imports in ratio to its domestic sales, with separate limits on importing components.

• No layoffs because of outsourcing.

Decision-making

• Right to internal corporate financial data and other pertinent information.

• Adequate advance notice of any corporate plan or change of operations which could impact members. This would include plant closings, sale of operations and sourcing decisions. There would be no implementation of these decisions without prior union approval.

Suppliers

• When the union identifies suppliers producing parts or services during a strike or lockout or while contesting a National Labor Relations Board election, a joint Supplier Stability Committee will investigate the charge and, if necessary, notify the purchasing department which will consider finding a more stable supplier.

Health care

• Both sides agree the cost has to be cut. GM spent $2.2 billion in 1983 for health care while Ford spent $743.3 million. Ford has indicated it will look at introducing co-pays and deductibles. GM has said it has not decided what the correct steps would be. The UAW has asked GM to support National Health Insurance.

Other demands

• Child care facilities.

• Elimination of the Irregular Attendance program which penalizes chronically absent workers.

• Increases in the group legal services program negotiated in 1982.

• Restricting overtime in areas where laid-off workers could perform the work involved.

Attend World Expo. You'll see all these (and many more) participants from around the world.

Sports, specialty cars called worst in 1984 collision loss

WASHINGTON. — Sports and specialty automobiles for the 1984 model year have worse collision coverage loss results than other 1984 vehicles, according to recent data from the Highway Loss Data Institute (HLDI).

Station wagons have the best collision coverage experience, HLDI said.

The insurance - industry - supported institute said its findings are based on insurance collision coverage experience from October, 1983, through February, 1984, collected from 12 insurers.

Of the 200 car models contained in the HLDI data base, 65 models had accumulated enough data to provide reliable statistical rankings, HLDI said.

The institute said the four-door Mercury Grand Marquis had the lowest average loss payment per insured vehicle, followed by the four-door Chevrolet Caprice.

The BMW 318i had the worst average for collision claims per insured vehicle, followed by the Ford Mustang, HLDI said.

Import dealership total shows first-half rise

Continued from Page 1

160 percent, and Saab, 62, for 19 percent.

The Japanese makes had by far the most exclusives: 2,290. That was an increase of 54 since the beginning of the year. Single-line dealers represented 21 percent of all Japanese-car franchises.

There were 218 German-car single-line dealers on July 1, up 13 from Jan. 1. Exclusives were 14 percent of the German-car networks. Swedish-car single-line dealerships numbered 182, up by 10 and representing 25 percent of the network.

Italian-car single-line dealers numbered 53; French, 44, and British, 48.

The franchise total also rose to a two-year high: 14,583.

Because most import-car dealers handle more than one line, there are more franchises than dealerships. All the numbers in this article refer to net changes in networks, so if one dealer shuts down and another opens up in the same category and carrying the same lines, no change is recorded.

On Jan. 1, the franchise total stood at 13,707. The most recent census showed an improvement of 876 during 1984. By country of origin, increases were recorded for Japan, Sweden, Italy and the UK.

• The company-by-company ranking of the top 10 imports was unchanged with the exception of the new Chevrolet Sprint, which immediately took eighth place, pushing down Mercedes-Benz and BMW and taking Audi off the list altogether. It also meant that the top eight franchise spots went to Japanese lines.

The Top 10, in order, were Plymouth, Dodge, Nissan, Toyota, Honda, Subaru, Mazda, Chevrolet Sprint, Mercedes-Benz and BMW.

Ten makes set records for their dealer totals.

Plymouth had 2,929. Its former record of 2,831 was set Jan. 1. Dodge had 2,844. Its old record of 2,744 was set on Jan. 1. Honda's 831 was up from its Jan. 1 record total of 822. Subaru's 803 was up from its Jan. 1 record of 798.

Mercedes-Benz had 416 dealers, matching its Jan. 1 record total. BMW's 414 also matched its Jan. 1 record. Bertone-Pininfarina dealers numbered 250, up from its first census report of 141. Isuzu's 217 dealers tied its Jan. 1 total, as did Ferrari's 48. Maserati also had 48 dealers, breaking its Jan. 1 record of 41.

The 13 makes that gained franchises during the first half were Bertone-Pininfarina, up 109; Dodge, up 100; Plymouth, up 98; Alfa Romeo, up 13; Lotus, up 10; Honda, up 9; Maserati, up 7; Saab, Subaru and TVR, each up 5; Mazda and Nissan, each up 4, and Ferrari, up 2.

Six companies lost a total of 10 franchises—not many, especially considering that Jaguar and Porsche both want to reduce their networks. Jaguar and Audi each lost three. One each was lost by Mitsubishi, Porsche, Rolls-Royce and Peugeot.

Another six companies registered no change in the number of dealers: Toyota, Isuzu, Mercedes-Benz, BMW, Aston Martin and Volvo.

Historical highpoint: Profits at Ford reach $909 million

By Michelle Krebs
Financial Editor

Ford Motor Co. announced second-quarter profits of $909 million, the highest of any quarter in its history.

The second-quarter net income was 68 percent higher than the $542.2 million earned in the period last year. Per-share earnings were $4.95, compared with $1.95 a year ago.

Ford said the improved second quarter was due to higher sales in the U.S. and Canada, productivity improvements and higher car market shares.

Dollar sales for the quarter totaled a record $14.1 billion, up 20 percent from a year ago. Worldwide sales for the quarter amounted to more than 1.5 million units, up 14 percent from last year.

For the first six months of 1984, Ford's earnings totaled $1.81 billion on sales of $27.1 billion. Both were alltime peaks for the company.

Ford's after-tax profit in the U.S. amounted to $742 million in the second quarter, up 120.8 percent from the $336 million in the same period a year ago.

Ford said its market share in the U.S. was 18.1 percent, up 1.1 points from the same period last year and the highest second-quarter share since 1979.

The company attributed the higher market share to increased sales of its Ford Tempo and Mercury Topaz models as well as stronger sales for its large, luxury cars.

Ford's earnings outside of the U.S. also increased, to $167 million from $136 million last year. However, the company said foreign earnings continue to be affected by the strong dollar, high marketing costs in Europe, weak Latin American economies and a strike by German metalworkers.

AMC chalks up a profit for 3rd straight quarter

By Michelle Krebs
Financial Editor

SOUTHFIELD, Mich.—American Motors reported its third consecutive profitable quarter, with net income for the second quarter of 1984 totaling $4.7 million.

AMC's second-quarter profit was preceded by a first-quarter profit of $5.1 million and a profit of $7.4 million in the fourth quarter of 1983 following 14 consecutive quarters of red ink.

AMC's second-quarter profit compares with a loss of $78.9 million in the same quarter last year. Per-share earnings amounted to two cents compared with a loss of $1.06 in last year's second quarter.

Net sales for the quarter were $1.06 billion, up 39.4 percent from last year's $762 million.

For the first six months of 1984, AMC's earnings totaled $9.8 million, or five cents per share, compared with a loss of $145 million, or $2.24 per share in 1983. Sales for the six-month period totaled $2.144 billion, up 53.3 percent from last year's $1.399 billion.

Sales of the new Jeep Cherokee Wagoneer were credited with AMC's improved performance.

Worldwide passenger-car sales were down 16.8 percent for the quarter while worldwide Jeep sales were up 129.4 percent, bringing total worldwide sales to 113,414 units, up 19.5 percent over the same quarter the year before.

For the six-month period, worldwide passenger-car sales were off 6.5 percent and Jeep sales were up 160 percent. Combined Jeep and car sales were up 31.4 percent from the first six months of last year.

Misfueling charge filed by EPA

WASHINGTON — A private gas pump allegedly used to put leaded fuel in 25 of 56 company cars which needed unleaded gasoline may lead to a fine of $182,650 for an Oregon company, according to EPA.

The firm involved is Louisiana-Pacific Co., Portland, Ore., a pulp and paper producer. The violations were said to have occurred at a facility in Red Bluff, Calif.

EPA said its investigation confirmed a report from the San Francisco Bay chapter of the Sierra Club that illegal fuel was being used.

Obituaries

James J. Nance, 84, dies; tried to save Packard, Edsel

CLEVELAND. — James J. Nance, whose automotive career never matched the success he achieved in appliances and banking, was found dead in his summer home in Bellaire, Mich., July 23. He was 84.

Mr. Nance was best known in Detroit as the man who merged Packard with Studebaker and who inherited the job of ministering to a market-sick Edsel at Ford Motor Co.

He began his career at National Cash Register Co. in 1924 and moved to General Motors in 1928 in the marketing department of Frigidaire. He was vice president of Zenith Radio Corp. from 1940 to 1945 and became president of Hotpoint, Inc., in 1945.

He gained a reputation as a razzle-dazzle marketer at Hotpoint, and a terminally ill Packard Motor Car Co. called him to take over the reins there in 1952. He was president, chief executive officer and a director.

He was the architect of the Studebaker-Packard merger and it is believed he intended to extend the merger to include American Motors, but that never came to pass.

He joined Ford Motor Co. in 1956 and was named general manager of Lincoln-Mercury in 1957. That became Mercury-Edsel-Lincoln Division early in 1958, when it became apparent that Edsel was not doing well enough in the market to justify continuation of a separate Edsel Division.

Mr. Nance's job was to meld the three lines into one division. He later told a reporter that the job was "unpleasant and nasty."

Mr. Nance left Ford Motor later in 1958 and in 1960 he was named president of the Central National Bank in Cleveland. He was chairman and chief executive officer of the bank at the time of his retirement in 1967.

After that, he became chairman and chief executive officer of First Union Real Estate Investments Co. in Cleveland and served until 1978, when he formed his own consulting company.

He was active in civic affairs and received a number of prestigious awards over the years.

Edward C. Larson

TOLEDO.—Edward C. Larson, 80, retired chairman of Anderson Co., died July 12. Anderson, manufacturer of Anco windshield wiper products, is now part of Champion Spark Plug Co. Mr. Larson joined the company in 1928 as administrative assistant to Echo Will Anderson, the firm's founder.

Frederick M. Loop

PITTSBURGH.—Frederick M. Loop, 65, general manager of automotive original finishes for PPG Industries, Inc., and the inventor of cathodic electrodeposition, died of a heart attack near Barcelona, Spain, July 20 while on a business trip. He also held numerous patents on waterborne primers.

J. H. Manly

ABILENE, Tex.—J. H. Manly, 73, former owner of Manly Pontiac, Inc., died here. He entered the automobile business with his father and brothers in 1934 and retired in 1973. He had been president of the Abilene New Car Dealers Assn. and an area director of the Texas Automobile Dealers Assn.

Chrysler to recall 142,000 minivans for window fault

DETROIT. — Chrysler Corp. is having a window problem on '84 Plymouth Voyager and Dodge Caravan minivans.

It plans to recall 142,000 Voyagers and Caravans because the window on the siding door may break if the door is slammed.

The company issued a customer alert, advising owners to close the vent-style window before closing the door. It claims that breakage occurs only if the window is open when the door is being closed.

To solve the problem, a replacement latch for the windows, with higher stress absorption, will become available in dealerships in mid-September.

It will be installed free of charge. The company will also reimburse owners who have already paid to have the glass fixed.

Long rhubarb on U.C. rule is nearly over

Continued from Page 2

ed benefits and, in fact, that there is no difference between buyers in Wisconsin and those in other states with respect to awareness of mechanical problems before the sale.

The study found "14 percent of Wisconsin consumers were aware of mechanical problems at the time of sale, compared with 15 percent" of used-car buyers in states without the defect disclosure law. Fewer Wisconsin consumers (20 percent) than consumers in other states (24 percent) reported that dealers disclosed mechanical problems, despite the Wisconsin law.

Moreover, said the FTC staff, the study suggests the Wisconsin defect-disclosure law does not improve the buyer's ability to predict future repair costs. In fact, 65 percent of Wisconsin buyers, compared with 60 percent in other states, had post-sale repairs.

Comments on this survey and its implications for the rule are being requested by FTC before it takes any final action.

Final approval of the controversial rule — with perfecting amendments suggested by NADA — is expected by mid-September.

3 plants idle, week's build is 134,195 cars

Chrysler changeover cuts output

By Joe Wilssens
Staff Writer

Domestic auto production dipped last week as three Chrysler Corp. assembly plants joined Volkswagen in making model changeovers.

U. S. makers slated completion of 134,195 cars last week, down 4.31 percent from the prior week's 140,244. Last week's build was 16.79 percent above the year-ago week's 114,899.

Chrysler's Newark (Del.) and St. Louis assembly plant No. 1 joined the company's idle Jefferson (Detroit) facility in making model changes. About 11,000 workers have been idled by the changeover. Newark and St. Louis No. 1 are scheduled to resume production Aug. 6, while Jefferson is slated to return today (July 30).

Year to date, 4,747,248 cars have been built in the U. S., 26.35 percent more than the 3,757,099 finished during the same 1983 period.

Of last week's projected car output, General Motors accounted for 62.04 percent followed by Ford Motor Co., 26.34 percent; Chrysler Corp., 5.81 percent; American Motors, 3.58 percent, and Honda, 2.23 percent.

GM scheduled last week's only overtime. The company's Janesville (Wis.) and Flint B line worked two Saturday (July 28) shifts while the Bowling Green (Ky.) plant worked one Saturday shift.

GM's Lordstown (O.) and Willow Run (Mich.) facilities are down for model changeover but are expected to resume production Aug. 6. The company's Leeds (Mo.) and Wilmington (Del.) plants, also idle for model changes, will return Aug. 13.

Unhappy diesel owners cite first-year achievements

WASHINGTON — Citing its first-year achievements, the Disgruntled Diesel Owners Group (D-DOG), is urging other dissatisfied owners of General Motors diesel cars to establish or join similar groups.

The Virginia consumer group, headed by Joyce Arndt, said that under the major agreement D-DOG signed with GM:

1. 6,800 members who joined by Feb. 21, 1984, have so far received more than $3 million in cash or kind.

2. GM has offered cash compensation or paid for repairs on cars owned by more than 2,000 D-DOG members, averaging more than $1,500 per vehicle.

3. More than 500 D-DOG members have received new diesel engines from GM at reduced or no cost.

4. Another 2,000 claims are now under review by D-DOG and GM, and others will be processed as these are cleared.

Involved for this group and others across the nation are 350-CID diesel engines made by Oldsmobile and used in several lines starting in 1977.

• Early problems developed in fuel-injection pumps and fuel injectors, prompting an FTC investigation which, along with other problems, was settled by consent and resulted in an arbitration program handled by the Better Business Bureaus.

But diesel owners soon complained of other and more serious problems—blown head gaskets, cracked blocks, irreparable oil leaks, broken camshafts and crankshafts and bad transmissions—some of these not developing until 40,000 miles or so.

Arndt's report on the first year of operation under the D-DOG/GM agreement is intended to urge others to follow her group's success. She said that more than 700 diesel owners who joined D-DOG after the deadline are being treated in much the same way.

The July, 1983, agreement allows owners to use a special claim form and to include documentation of their losses, which can include towing, rental cars or airfare; lodging (if need is proved), and an owner's own labor on attempted repairs. Also very important, said Arndt, is the direct line of communication.

But, Arndt added, GM is still not willing to honor its written commitment to defray D-DOG expenses. She speculates that this is because GM is leery of what D-DOG may do about the diesels' "loss of resale value" or excess depreciation problems. GM denies any responsibility for this and D-DOG will not say what its plans are.

Canadian output rises as Ford and AMC return

Canadian auto and truck production climbed last week as American Motors and Ford Motor Co. resumed assembly following summer vacations. The improvement came despite a trimmed General Motors build and a vacationing Chrysler Corp.

Canadian manufacturers projected completion of 19,455 cars last week, 62.97 percent above the previous week's 11,938 and 27.83 percent greater than the year-ago week's 15,219. Returning Ford and AMC workers offset a slightly reduced General Motors build. Changeovers on Celebrity and 6000 models accounted for GM's low production.

Year to date, 648,797 cars have been completed in Canada, 10.70 percent above 586,080 finished during the same period last year.

The industry slated production of 7,355 trucks last week, 23.10 percent better than the prior week's 5,975 and 45.21 percent above the year-ago week's 5,065. Truck totals improved with Ford's return, but remained below normal due to vacations at Chrysler.

So far this year, 471,727 trucks have been built in Canada, an impressive 57.00 percent increase from 300,457 completed at this time last year.

GM's Oshawa (Ont.) plants were the only car facilities working Saturday (July 28) overtime. Truck output at Oshawa declined as only one shift worked last week.

Chrysler down; truck production declines in U.S.

Domestic truck production dipped slightly last week as Chrysler Corp. was down for model changeover.

The industry targeted assembly of 59,412 trucks last week, down 7.57 percent from the previous week's 64,277. Last week's tally was 29.29 percent above the year-ago week's 45,951.

Chrysler's Warren (Mich.) truck facility is scheduled to resume production today (July 30). About 3,500 hourly workers are idle during the model changeover which began July 23.

General Motors was the only company scheduling overtime last week. The company's Flint facility worked two Saturday (July 28) shifts while the Pontiac plant worked one additional Saturday shift.

59th year—$40 per year, $1.00 per copy

Domestic dealership total increases 54 in first half

By John K. Teahen Jr.
Managing Editor

Sunny days continued for the domestic dealer population in the first half of this year. The number of outlets handling U. S.-made passenger cars continued the upturn that began 12 months ago.

The latest AUTOMOTIVE NEWS census found 20,895 domestic dealerships on July 1, up 54 from the 20,841 counted on Jan. 1.

There was a gain of seven establishments in the first quarter and 47 in the second. The total has risen in each of the last four quarters.

The first-half upturn was the first in the 23 years that AUTOMOTIVE NEWS has been compiling quarterly and semiannual dealer totals. The rise of 54 establishments compared with a loss of 76 in the same period last year.

During the auto depression of the early 1980s, the first-half losses were severe—556 in 1982, 325 in 1981 and a horrendous 930 in 1980.

Chrysler Corp. made the difference in the first six months of this year with a gain of 91 outlets, and Ford Motor Co. also was on the plus side with a rise of 11.

There were dips of 20 dealerships for General Motors, 28 for American Motors - Renault and 10 for Volkswagen. A change in the number of intercorporate duals brought the industry's upsurge to 54 establishments.

All figures in this article and in the accompanying tables refer to the net change in the dealer population, both for the individual corporations and car lines and for domestic industry as a whole.

In the first half, franchise totals rose for every Big Three make except Chevrolet. AMC, Renault and VW also were down.

Biggest franchise jumps were made by the three Chrysler Corp. car lines. Dodge was up 100, Plymouth was up 98 and Chrysler was up 92.

Mercury recorded an advance of 26 franchises, and there were gains of 16 for Ford and nine for Lincoln.

At GM, Buick and Pontiac

ASC converts Toyota model

A convertible version of Toyota's Celica GT-S is set to go on sale in mid-August. Conversion of the hardtop is being handled through Toyota Motor Sales U.S.A and ASC, Inc. It is estimated that the price will be in the $15,000 range. Story, other photos on Page 30.

GM proposes policy change; could create 'super-dealers'

By Jake Kelderman
Washington Reporter

WASHINGTON. — In a move that could change the evolution of the franchised car and truck business, General Motors has proposed guidelines that would permit a dealer to take as much as 49-percent interest in as many as 10 GM dealerships.

The current policy is to allow a dealer to hold no more than three GM dealerships.

The proposal could pave the way for creation of a line of GM "super-dealers" in major population centers, giving GM substantial distribution efficiencies and significantly enhanced dealer operations, analysts agreed.

GM announced the proposed changes in a letter to dealers concerning its GM Franchise Policy, which is to be renewed in 1985. The changes would become effective with the renewal.

The company also proposed to make it easier to get into one of its dealerships and by increasing the length of time, from eight to 10 years, in which to acquire voting control and a minimum of 51-percent ownership interest in a new dealership.

The franchised dealer business, like everything else, has suffered from inflation. It now typically takes $2 million to $3 million to get into a new facil-

Ford and U. S. Steel form joint venture

DEARBORN.—Ford Motor Co.'s Rouge Steel and U. S. Steel Corp. are forming a joint venture to build and operate an electrolytic galvanizing plant here. The project will cost between $130 million and $150 million. The galvanizing line will be ready for the '87 model year.

GM settles diesel engine suits for $22.5 million

NEW YORK. — General Motors has settled in federal court here for $22.5 million three class-action suits on behalf of 450,000 original-owner plaintiffs who bought 1978-1980 GM cars and light trucks with 260 and 350-cubic-inch diesel engines. In a settlement offered the court for approval, GM said it will pay for engine repairs for 5 years or 50,000 miles. Owners with documented proof of repairs will be reimbursed

Air-bagged Mercedes misses limit in crash

By Helen Kahn
Washington Bureau Chief

WASHINGTON—An air-bag - equipped Mercedes - Benz 300-SD edged past the allowable chest deceleration figure for the driver-side dummy in NHTSA's latest round of high-speed crashes.

The barrier crashes are at 35 MPH, producing forces of about one-third more than the 30-MPH barrier crashes required for compliance with safety standards.

Also crashed in the latest round was a Nissan 200-SX two-door hardtop that turned in head injury criteria (HIC) number above the allowable 1000 HIC for the driver.

The Toyota Van Wagon came in under all NHTSA criteria for head and chest injuries for both driver and passenger.

The Mercedes-Benz 300-SD four-door sedan with $880 driver-side-only air bag came in under the HIC limit for both pas-

U.S. auto execs' compensation soars 40 pct. in 1983

By Michelle Krebs
Financial Editor

What a difference a year makes.

While the U. S. auto industry struggled to survive in 1982, executives' salaries held steady or rose only slightly. In many cases, bonuses were eliminated.

However, in the boom year of 1983, only a handful received no increase in pay, and the average increase in combined salary and bonus for the industry's highest-paid executives was about 40 percent.

In 1982, only one executive in the U. S. auto industry made more than $1 million in salary and bonus. In 1983, half a dozen broke the $1 million mark, and the number would be much higher if stock options and stock bonuses were included.

In 1982, compensation for executives of supplier companies far outpaced the pay of the auto makers' executives. In 1983, General Motors and Ford Motor Co. executives held those top spots.

Ten GM and Ford executives were among the 35 highest-paid executives in the U. S. auto industry in 1983, based on combined salary and bonus only, according to AUTOMOTIVE NEWS' second annual executive compensation survey.

In 1982, executives of supplier companies clinched the top 18 spots, and GM was the only auto maker to have any executives listed among the top 35. GM had two—Chairman Roger B. Smith and President F. James McDonald.

• The latest survey of publicly traded companies showed 172 industry executives made more than $300,000 in salary and bonus for 1983. The number is undoubtedly higher, however, because the companies are required by law to list only the five highest-paid executives.

As a group, the top 172 executives made $87 million in 1983, or slightly more than a half-million each. The average of the same group in 1982 was just under $400,000.

Ford Motor Chairman Philip Caldwell bumped United Technologies Chairman Harry Gray from the No. 1 spot Gray held last year, while three other Ford executives were included among the top 11.

Ford executives, in fact, enjoyed the largest percentage increases in salaries and bonuses. Ford's top five executives received increases of more than 200 percent and were the only ones included in the survey to receive increases of more than 200 percent.

Seventeen executives received increases of more than 100 percent.

GM's Smith and McDonald also made the Top 10 list.

• Chrysler executives remained low on the compensation list because only salaries were included. Bonuses have been approved for 1,440 Chrysler executives, but the amount of bonuses for Chrysler's top five executives will not be revealed until the 1984 proxy statement comes out next spring.

AMC Chairman W. Paul Tippett was the only chief executive of an auto company to take a decrease in pay and was among only half a dozen working executives included in the survey to show a pay drop.

(Cummins Engine Co. execu-

Next Japanese competitor? For GM, it could be Canada

By Marjorie Sorge
Labor Editor

OSHAWA, Ont. — General Motors of Canada could be GM's new base of operations for small-car production if it is able to maintain its spot as the corporations' number one competitor with the Japanese, said John F. Smith Jr., president and general manager of GM of Canada.

"We can be more competitive with the Japanese from our base in Canada than we can, say, from the U. S.," he said. Labor costs in Canada are $5-$7 an hour less than in the U. S. while Japanese costs are $8-$10 an hour lower.

Besides the labor cost, Smith said the subsidiary is competitive in quality, productivity and overall cost.

The small cars will continue to come basically from joint ventures and import ventures for at least the next four years, Smith said. The origin of those cars then hinges on the success of the Saturn Project, he said.

In an interview with AUTOMOTIVE NEWS, Smith also said:

1. GM of Canada is studying possible joint ventures with Opel and a Japanese company—not Toyota. He said they are both just paper studies to see if manufacturing a car is feasible and competitive.

2. While GM of Canada does not expect to have a car developed solely for the Canadian market, it would like to have a variant of another division's car with a solely Canadian nameplate. GM has done this with the Acadian from Pontiac.

(GM of Canada may get an exclusive Canadian version of the new Chevrolet X-car for '87. The Canadian car would carry the Pontiac name.)

3. There are plans to add another 40 dealers in the next few years, raising the total from 960 to 1,000.

4. GM of Canada will be selling the GM-Toyota joint venture cars scheduled to go into production this fall. It will not, however, bring in any other Toyota vehicles to sell at its dealerships.

Under the Auto Pact, Toyota could escape paying a tariff on its Japanese-built cars if they were sold at GM dealerships since it now has a joint venture with GM. It has not been decided if GM of Canada will sell the Daewoo from Korea or the Isuzu, but it will be selling the Suzuki Sprint (Firefly in Canada) in British Columbia.

5. GM of Canada is studying the possibility of creating its own supplier subsidiaries which would be separate from the corporation. Oldsmobile is studying a similar project to create a fiberglass company which would be run by Oldsmobile outside of GM.

6. The long-term plan is to stabilize the workforce, currently numbering 36,627 hourly and 8,100 salaried. GM of Canada has been able to hire an average of 1,500 hourly workers a year and hired 200 new college graduates for salaried positions in 1984, without surpassing the attrition rate.

7. Another downturn in the auto industry is not right around the corner in Canada.

• "There are some underlying strengths in the economy, particularly the lower rate of inflation that bodes well for a long-term recovery," Smith said. "The one cloud is the interest rate and in Canada the high interest rates are caused by the pressure on the Canadian dollar because of the strength of the U. S. dollar.

"Inflation is currenty running at about 4 percent in Canada, which is the lowest rate in 12 years. That is very healthy. Interest rates are 14 percent and they would not be nearly as high as they are if there was not this pressure on the Canadian dollar.

"So to some extent, if the pressure comes off the Canadian dollar, you will see interest rates start to drop and you will

GM buys into leaders in machine vision field

By Roger Rowand
Engineering Editor

Technical developments are coming so fast in automated manufacturing that even General Motors can't keep up by itself and is taking the acquisition route to technical capability.

In its latest moves, GM is buying up to 20 percent of VIEW Engineering, of Simi Valley, Calif.; up to 30 percent of Diffracto Ltd., of Windsor, Ont., and up to 20 percent of Automatix, Inc., of Billerica, Mass. No acquisition prices were disclosed.

All three are leaders in the rapidly emerging technology of machine vision in which images are analyzed by computer in much the same way as data is analyzed by computer.

Machine vision, an aspect of machine intelligence, is at the threshold of wide use, manufacturing engineers say. It will be utilized to inspect items during manufacture and will be extremely important in quality control.

For example, in assembly of electronic devices such as radios, machine vision will examine each solder point where such tiny components as transistors and resistors are attached to printed circuit boards.

If connections aren't good, the board will be sent automatically to a repair station. Information on the rejection will be collected, analyzed and stored by the computer.

Quality trends will be noticed, analyzed and reported to manned stations where corrective actions—such as stepped up inspection of incoming parts from suppliers—can be instituted.

Such repetitions and exhausting inspection tasks will be done more precisely and at higher speeds with machines than could be accomplished with human labor, engineers say.

Some jobs, they say, can be done only by machinery. One example: Inspection of the in-

Defendant not called to testify

DeLorean case to jury this week

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES.—Defense attorneys in the DeLorean drug-trafficking case here rested their case last week without calling John Z. DeLorean to testify.

Closing arguments are scheduled this week and it is expected that each side will take six hours to sum up its case. The case will then go to the jury, following instructions from Judge Robert M. Takasugi.

DeLorean's attorneys called their final witness last week, Gerald Scotti, a former Drug Enforcement Administration agent who worked on the DeLorean investigation.

Scotti said the government informant, James Timothy Hoffman, bragged to him on June 29, 1982, that he could deliver John Z. DeLorean on drug charges and added that DeLorean's situation was so desperate that the former auto maker would do anything the informant wanted.

Scotti said that after DeLorean's arrest, Hoffman again bragged about how he "got" DeLorean. That first meeting was the same day that Hoffman said DeLorean contacted him about a drug deal.

Scotti said that although at the time of DeLorean's arrest he thought the defendant was guilty, he later had second thoughts.

"I was caught up in it as much as anyone else," Scotti said. "We wanted it to happen. I think we were all blind. This thing was on a steamroller. We lost sight of where we were."

While the defense attempted to portray Scotti as a former agent who had a change of heart, the prosecution tried to paint Scotti as a disgruntled former agent trying to get back at the government.

In redirect questioning, government attorneys produced documents that showed Scotti had resigned from the DEA to avoid prosecution on charges that he leaked sensitive government information to an attorney who was representing a client facing drug charges.

Pontiac 1000 intro

DETROIT. — Pontiac is introducing its 1985 subcompact 1000 on Nov. 21, the same day as Chevrolet's Chevette. The wrong date had been reported.

GM of Canada eyes 'exclusive' Pontiac for '87

Pontiac is working on a special Canadian version of the 1987-model-year GM25, according to Pontiac insiders.

The GM25, or L-body, reportedly is a 103-inch-wheelbase replacement for the aging Chevrolet Citation X-car, and has been anticipated as a Chevrolet exclusive in the U. S., since Chevy did not get a version of the 1985 GM20 or N-body that went to Oldsmobile, Buick and Pontiac.

Selling a Canadian-only Pontiac version of the L-car would be the first time in several years that GM has marketed such an "exclusive" north of the border, an indication that the Canadian operation is exercising additional marketing clout.

The new L-body is slated for the Linden and Wilmington assembly plants, which recently began ordering tooling for the new car.

It is anticipated as a high-volume, moderately-priced car with an aerodynamically styled body based partially on components used in the 1985 N-body, but with a distinctive body shell.

For quarter; income for half is record, too

Makers earn record $3.3 billion

By Michelle Krebs
Financial Editor

The domestic auto industry set new records for quarterly and first-half profits and sales in the second quarter of this year.

Combined net income for the Big Four in the quarter was $3.3 billion on sales of just under $42 billion. Income in the first quarter of this year was $3.2 billion on sales of $41.9 billion, which was the industry's best quarter until this one.

Industry profits for the quarter were up 83 percent from the $1.8 billion earned in the same quarter of last year, while sales were up 18 percent from last year's $35.5 billion.

At the same time, the domestic auto makers set a new six-month record with profits of $6.5 billion, up 135 percent from last year's $2.8 billion. Sales amounted to $83.9 billion, up 27 percent from last year's $66 billion.

The first half of 1984 surpassed the industry's previous record set in 1979, when combined net income was $3.3 billion on sales of $69 billion.

Each of the Big Three auto makers set new records in the quarter.

General Motors set a new second-quarter record for sales and profits. Net income was $1.6 billion compared with last year's $1 billion, on sales of $21.6 billion, compared with last year's $19.4 billion.

Though the first quarter of 1984 continues to be GM's best-ever quarter, the auto maker did set a new first-half record with profits of $3.2 billion on $44.5 billion in sales. That compares with a profit of $1.7 billion on sales of $36.1 billion in the first half of 1983.

• Ford Motor Co. set a new quarterly record in the second quarter with a profit of $909.1 million on sales of $14.1 billion. Earnings last year were $542 million, while sales were $11.7 billion.

Previously, Ford's best-ever quarter was the first quarter of this year. The two record-setting quarters gave Ford its best-ever first half with $1.8 billion in net income on sales of $27.1 billion. That compares with net income of $753 million on sales of $21.8 billion in the first half of last year.

A new quarterly record was set at Chrysler Corp. as well with earnings of $803 million on sales of $5.3 billion. In the same period a year ago Chrysler earned $310 million on $3.6 billion in sales.

Chrysler's previous record for earnings and sales was set in the first quarter of this year when net income was $706 million on sales of $4.9 billion.

Naturally, two record quarters produced Chrysler's highest-ever six month period. Income for the first half totaled $1.5 billion on $10.2 billion in sales. The first-half earnings surpassed full-year earnings of 1983.

American Motors also contributed to the industry's best-ever quarter and first half. AMC showed its third consecutive profitable quarter after a string of 14 quarterly losses with net income of $4.7 million on $1.1 billion in sales. That compares with a loss of $78.9 million on $762 million in sales in the same quarter a year earlier.

For the half, AMC's profits were $9.8 million on sales of $2.1 billion, compared with the first half of 1983 when AMC lost $145 million on $1.4 billion in sales.

Dingell urged to bring anti-subsidy bill to vote

By Richard Johnson
Detroit Reporter

The original sponsor of fleet/lease anti-subsidy legislation in the U. S. House called on Energy and Commerce Committee Chairman John Dingell last week to speed a revised version of the bill to a vote.

While in Detroit to address the Detroit Auto Dealers Assn., Rep. Gene Taylor, Missouri Republican, said that Dingell "has made a commitment" to move the legislation and should honor it.

The latest version of the House anti-subsidy proposal, offered by Rep. Wayne Dowdy, Mississippi Democrat, was unanimously reported last month by a subcommittee to the full Energy and Commerce panel.

The measure would prohibit auto manufacturers from selling cars and light trucks to any person or company at a price lower than that offered to dealers. NADA has maintained that lower prices for fleet/lease customers cost franchised dealers $1 billion a year, an expense reflected in the prices paid by consumers.

Dingell, a Michigan Democrat, has questioned several aspects of the legislation and succeeded in having some alterations made. Among changes approved by the subcommittee are an exemption for sales to charitable organizations, as defined by the IRS code, and a requirement that only "aggrieved" persons showing damages can file suit under the law.

Taylor, a former Ford dealer, said he found recent amendments to the legislation acceptable and is willing to listen to other questions raised by Dingell.

"The new bill has removed a lot of objections and I understand there will be some other changes," he said. "I have told him that if he has problems, I want to work them out. We could pass this bill if John Dingell would let us vote on it."

Dealers have also charged

Reagan urges UAW restraint in auto talks

DETROIT.—President Reagan has called on the UAW to show restraint in negotiations with General Motors and Ford Motor Co. this year.

"The workers did make some concessions (in the last round of bargaining)," he said in an interview on WDIV-TV here last week.

"On the other hand, while the automobile companies now are back in a profit position, there were several years in which they were running tremendous losses, and I hope that there will be not only fairness, as there should be, but some restraint also in negotiations."

Mr. Reaagn also said the government should not interfere in the talks.

UAW President Owen Bieber agreed that the government should not get into the bargaining, but he took exception to the call for restraint.

Bieber also called on the President to extend the Voluntary Restraint Agreement on Japanese imports at or below the current level and asked that meetings be convened between management, labor and government to develop a "meaningful industrial policy."

GM buys stake in 3 firms, all leaders in machine vision

Continued from Page 3

side of deep power steering housings.

The three vision firms in which GM is investing also will receive research and development money from GM. They have been suppliers to GM. Size of GM R&D involvement to come was not disclosed.

• In the fiscal year ended June 30, VIEW had sales of about $15 million compared with about $9 million a year earlier. It was reported to be the only one of the three making a profit in recent years. VIEW was founded in 1976 and has 160 employes.

Diffractor, closely held, is 10 years old and has about 100 employes. Its annual sales are in the $5 million to $8 million range and it expects to turn a small profit this year, Chairman Tim Pryor said.

About 20 percent of Diffracto stock is held by Otto Wolff A.G., a German steelmaking and trading company which also produces gauging instruments. Wolff is tied with Thyssen A.G., which, among other things, owns Budd Co., a major automotive supplier based in Troy, Mich.

Automatix is about five years old and last year had a loss of $2 million on sales of $13 million.

It calls itself the largest independent supplier in the robotics industry. It designs, makes and markets intelligent robot and artificial vision systems used in a wide variety of industries.

Companies working in machine intelligence typically have been entrepreneurial in structure and observers say their R&D spending has left many of them with heavy debt burdens. GM's infusion of funds should help ease debt problems for the three in which it is acquiring interests, authorities say.

As the interest acquisitions were being announced by the vision companies, GM announced appointment of a man to oversee its machine intelligence efforts.

He is Gerald L. Elson, who has been director of plant operations for GM Manufacturing Engineering & Development. Elson was named executive director of machine intelligence technology implementation for the GM Advanced Product and Manufacturing Engineering Staff, a new position.

In May GM said it had bought an 11 percent interest in Teknowledge, Inc., a Palto Alto, (Calif.) knowledge system company for $3 million in cash.

In June, GM and Electronic Data Systems Corp., Dallas, agreed to a merger with GM acquiring EDS in an exchange of stock, cash and notes. EDS makes computers and related equipment.

from 90 percent of the $22.5 million; those without proof can get up to $150, funded out of 10 percent of the money. No duplication of reimbursement will be made. GM will notify plaintiffs.

Electronics to be key to car classification

MARKHAM, Ont. — Electronic content some day soon will become a measure used in car class differentiation, Ford Motor Co. President Donald E. Petersen said. In opening a Ford electronics manufacturing plant here, Petersen said a typical U. S. luxury car contains 50 semiconductors, mostly in the radio. In contrast, the Continental Mark VII contains 450 semiconductors with its air ride, luxury air conditioning, electronic fuel injection and, this fall, four-wheel anti-skid braking. Class-to-class differences in content will become more marked in the years ahead, Petersen said.

News roundup

Lotus builds 30,000th production sports car

NORFOLK, England. — The 30,000th Lotus production sports car, a silver Turbo Esprit, has been built here. Production began in 1966, with the Lotus Elan, of which 5,508 units were made.

Traffic deaths rise for month, year

WASHINGTON.—Traffic fatalities increased for May and for the first five months of 1984, according to NHTSA estimates. The May estimate was 3,769, up 2.7 percent from 3,670 in May, 1983. The five-month toll of 43,414 was 0.5 percent higher than the year-earlier figure of 43,195.

Daihatsu to build in Trinidad and Tobago

TOKYO. — Daihatsu Motor Co. has begun knockdown assembly of passenger cars in Trinidad and Tobago in a joint venture with Amalgamated Industries. Trinidad and Tobago banned import of built-up passenger cars in 1983. Toyota and Nissan also assemble cars there.

Beatrice acquires Rusty Jones

CHICAGO. — Rusty Jones, Inc., has been acquired by Beatrice Cos., Inc., Chicago-based food and consumer goods firm. Terms of the acquisition were not disclosed. According to Michael Mater, Rusty Jones president, the firm will "use Beatrice resources to expand its opportunities in car-appearance care."

Emissions-averaging at plants approved

WASHINGTON.—The Supreme Court has ruled that the EPA may allow companies to average together all the emissions sources at a single plant, even if the area of the plant's location has not attained national air quality standards.

Registration total also declines for May

Import market share dips 4 points

By Jenny L. King
Staff Writer

Import penetration of the total new-car market in May dropped nearly four percentage points from the year-earlier level and was up just 0.02 percentage point from April as import restrictions and booming domestic new-car sales worked against the foreign cars.

According to figures compiled by R. L. Polk & Co., imports totaled 198,796 in May, down 2.58 percent from 204,062 for the same month in 1983.

The number of new imported cars put on the books this May was up 5.99 percent from the 187,554 recorded in April. Import market penetration in April was 22.42 percent; this May it was 22.44 percent, and a year earlier it was 26.40 percent.

Honda again was in first place, beating out traditional top-dog Toyota by 1,254 units and capturing 19.61 percent of the import total. The Honda figure includes both imported cars and those produced in the U.S.

Second-place Toyota dropped 2.99 percentage points in share of the market, to 18.97 percent from 21.96 percent, and Nissan was down 2.87 percentage points, to 18.03 percent from 20.90 percent.

• Volkswagen, which also includes imported and U.S.-built cars, climbed to fourth from sixth place and gained 1.93 percentage points. Mazda, Subaru and Volvo were down in share of the market, while Audi, BMW and Mercedes-Benz made progress.

Ten imports accounted for 90.49 percent of the market, up from 89.34 percent in May of 1983.

Import registrations for the first five months of 1984 were up 1.65 percent, to 974,480 from 958,631. The small growth in numbers was more than offset by the explosion of domestic sales, as imports plunged 4.44 percentage points in penetration, to 23.84 percent from 28.28 percent in 1983.

Honda, in first place, was up 4.10 percentage points, to 19.87 percent from 15.77 percent last year. Toyota dropped 3.59 percentage points and Nissan was down 3.36 percentage points.

Mazda dropped to fifth place from fourth and was down 0.86 percentage points and sixth-place Subaru was down 0.23 percentage points. VW hopped from sixth to fourth place and was up 1.17 percentage points. Volvo, Mercedes-Benz, BMW and Audi all enjoyed market-share gains this year compared with 1983.

The top 10 imports claimed 89.70 percent of the five-month total, up from 89.61 percent a year ago.

The Japanese segment of the import market shrank to 67.83 percent from 75.97 percent, May to May. German products increased their presence, growing to 14.86 percent from 9.74 percent and the U.S. share was up to 9.37 percent from 5.29 percent.

Numbers of imports by country of origin were:

	May, 1984	May, 1983
Japan	134,844	155,021
West Germany	29,535	19,872
United States	18,637	10,800

Texas, Georgia enact safety seat laws

ATLANTA. — Two Southern states have enacted laws requiring motorists to use safety seats for children.

A bill requiring the safety seats, or restraints, for chidren under four years of age has been signed by the governor in Texas. A somewhat similar law enacted by the Georgia Legislature, went into effect July 1.

Suzuki, Toyota cars on way; another Japanese tie possible

GM eyes Canada as small-car base

Continued from Page 3

see a very healthy economy start to develop."

The Canadian dollar is now worth 25 to 30 percent less than the U. S. dollar. If the yen does not also strengthen against the U. S. dollar as much as the Canadian dollar, part of the cost advantage for GM of Canada will be eroded.

There are other variables in GM of Canada's competitive advantage with the Japanese besides the labor costs. Other parts of the equation include services, productivity, quality, where components will be purchased and the strength of the Canadian dollar against the yen. If the yen gets stronger against the U. S. dollar, then the competitive advantage is maintained.

The competitive advantage in Canada will be aimed toward the Japanese and small-car production. According to Smith, 65 percent of all car sales in Canada are in the small-car market, compacts and subcompacts. In Quebec, the percentage climbs to 75 percent. In the U. S., it is about 50 percent, he said.

It is because of GM of Canada's expertise in the small-car market that it was grouped with the Chevrolet and Pontiac divisions in the GM reorganization, Smith said. All three concentrate on the smaller end of the market spectrum. Also, GM of Canada basically manufactures cars for Chevrolet and Pontiac.

"Our goal is to put in place an organization that will beat the Japanese both in cost and quality in both our manufacturing operations and our marketing operations," he said.

"We are the most competitive of the manufacturing operations in North America (with the Japanese)," he said. "Part of our mainstream strategy is to beat the Japanese long-term. We intend to concentrate on the manufacturing base on the small car here in Canada.

"We have an excellent base here," he said. "We are in a strong position to accomplish this (overtaking the Japanese). In many areas, we are equal or better. We still have a way to go. Our cost is still behind, but we have excellent quality coming from our plants here and we feel we are a match in many areas."

Smith would not say the Canadian plants have better productivity than those in the U. S.

"There are some plants in the U. S. that are as good as ours, but our plants seem to run at the higher end of the spectrum," he said. "I wouldn't say we are overwhelming, but we have good productivity."

Smith measures productivity by taking the number of people involved in building a certain number of cars.

Smith said GM of Canada is studying the possibility of building a new assembly plant in Ontario that would build small cars. The proposed facility is still in the paper-pushing stage.

But he emphasized that the GM small cars in the near future will be coming from joint and import ventures. The origin of the small car after that depends on the success of the Saturn program, he said. That program is the beginning of a new method of building a car, totally involving both the company and the union in the entire project.

"It requires a significant amount of improvement in order to be competitive," Smith said. "If we produce a car that is competitive, then I would think you will see more action at the bottom end by North American manufacturing rather than the joinnt-venture programs.

"But for some time, the joint venture, in some form, will probably be a way of doing business at the small end of the line — for the next four years at least."

GM of Canada is interested in getting the UAW in Canada to participate in the Saturn project, Smith said, although so far "nothing has filtered down that far." He said the subsidiary would push for the Canadian UAW's participation "when it is appropriate."

To maintain its competitiveness in the Canadian market, GM of Canada hopes to have cars exclusively for that country. They would not be cars built by GM solely for the Canadian market because of the high cost of tooling a low-volume car and the safety and environmental certification.

"Those costs are overwhelming," Smith said. "So what you try to do is look at who has what we want or would like to have — joint ventures or other GM divisions. Generally speaking, we would find the ideal situation would be to work out an arrangement with someone who is already building a car or in the process of planning a car."

Should GM of Canada want a joint venture outside of GM, it would first make the proposal to the Chevrolet/Pontiac/GM of Canada supergroup. If approved, the car would be sold only in Canada and GM of Canada would decide what dealers would get the new vehicle.

"We are looking at three or four different proposals on manufacturing or marketing," he said. "I don't know if you would call them joint ventures or business arrangements or merely supply/sell arrangements."

According to Smith, the arrangements are all outside of GM and North America.

Dealers, too, play a big role in the success of the Canadian subsidiary. Many of the dealerships are family dealerships — parent to child — while others are headed by former GM employes.

"It's a family," Smith said. "I haven't seen this before, but it doesn't take long to realize the family relationship that exists between the factory and the dealer force."

The Canadian dealer network is closer knit than the U. S. basically because there are fewer people in that country and fewer dealerships — 940 in Canada compared with 10,645 in the U. S.

The suppliers are also important and Smith said GM of Canada will be pushing them to reorganize their companies in the same way as GM — streamlining operations.

The bulk of the components used by GM of Canada are single-sourced and the subsidiary has made strides in computerization techniques linking the suppliers directly to the factory. The suppliers are fed the production schedules for the just-in-time inventory system. There are also computerized payment systems and invoice lists, and the money can be deposited directly in the suppliers' bank accounts.

"We are moving rather rapidly in these areas and will continue to do so," Smith said. "The terminals in the suppliers' plants are turning out to be a very effective program in reducing inventories, not only for GM but also for the suppliers.

"We are much closer to our production schedules. It is really going to work well, and I'm sure it will be extended heavily into the U. S. as well."

Oldsmobile award for Deery Motors

Harold Jenkins, left, service manager, John Deery Motors, Cedar Falls, Ia., receives the Oldsmobile Service Award of Merit from Mike Vergon, Oldsmobile district service manager. John Deery Motors was one of 210 dealerships out of 3,000 to receive this merit award.

Signing Kelly

Callis Kelly signs a Chevrolet sales and service agreement to operate Kelly Chevrolet - Oldsmobile, Paintsville, Ky. Witnessing the event is John D. Helser, Chevrolet's Charleston zone manager.

Greater Chicago auction marks 30th anniversary

CHICAGO. — The 30th anniversary of the Greater Chicago Auto Auction was celebrated by Joe Lyng, the present owner.

The auction has five lanes and can handle over 1,500 cars in a single day. Auctions are held on Thursday.

Switch planned for 1985

Changes in GM policy may bring superdealers

Continued from Page 1

ity and as much as $15 million to purchase an existing dealership.

At those levels, it has become increasingly difficult to justify entering the franchise business and difficult for those already in it to expand. Yet, the car companies need new and better dealers.

Examples of chain dealerships already exist. The Rosenthal organization in the Washington, D.C., area, with nine dealerships; Hollman Co., in New Jersey, with nine; Benson Management Co., in San Antonio, with 13, and Key-Royal, in Birmingham, with 17, come to mind.

But they are not multi-dealer operations handling a single make; rather, they are umbrella organizations handling a varied number of makes.

Typically, these super-dealer organizations have a highly professional, multi-layered management structure and a substantial degree of specialization. Combined with a large cash flow, they can dominate their market areas.

It is not uncommon, for example, for such organizations to spend as much as $500,000 per month on advertising alone.

The GM switch on multi-dealer investment would permit this type of organization to develop within its line-up, conceivably leading to a dealership organization that would handle all of its makes from Chevrolet to Cadillac.

Said one GM dealer, "This move is a good one for both GM and the dealers. It allows us to bring in and reward our younger talented people and to better our return on investment while making it possible for GM to raise the quality of its entire dealer network."

• Some dedicated single-point GM dealers see it as threat, however, and fear that they may well be swallowed up by their larger brethren. Said one who wished to remain anonymous, "There is no way I can compete with those big guys."

Another dealer, who wholeheartedly applauded the change, lamented that it did not go far enough: "With the restriction against owning more than one store in a given market area. GM could be disqualifying some of its best candidates for expansion."

GM makes that restriction only in non-metro markets.

In its letter to dealers, GM said it was proposing the changes in response to a "mutual desire on the part of GM and many of its dealers to make the most efficient use of available dealer investment capital . . . in recognition of the escalating cost of getting into a dealership . . . and the need to attract qualified dealer operators."

While the multi-dealer possibility is an attractive one to dealers, GM will not make it available unconditionally. There is, for example, the requirement involving the Customer Satisfaction Index (CSI) by which GM measures the performance of its dealers.

Utilizing interviews of GM car buyers three and six months after purchase, CSI rates dealers on such factors as the selling experience, delivery condition and warranty service. Dealers also are compared to GM competitors in the region.

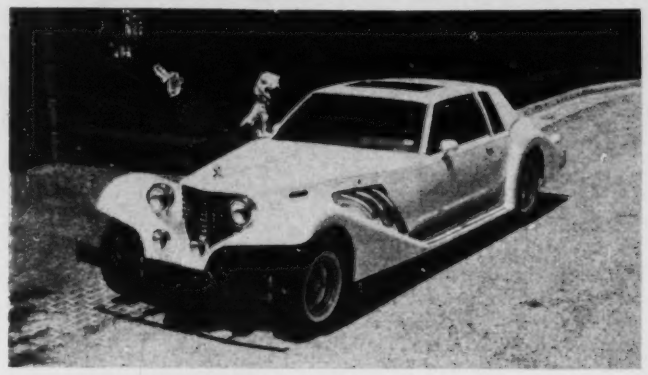
In its letter to dealers, GM said that it will not consider any dealer for the multi-dealer plan unless his/her existing dealership is at or above the CSI average for the region.

• Robert Daly, NADA executive director — communications, said NADA had been pushing for the change for about two years. The old system forced GM dealers to go outside GM for expansion, he said. Under this new policy, GM will be able to reward management talent.

"I think they (GM) recognize, as do we, that the auto business is not what it used to be," he said. "You just don't have a guy sitting in the store all day anymore. These people are sophisticated businessmen."

GM's major competitors have been less restrictive on the number of dealerships any one dealer can own. Ford Motor Co., for example, allows a dealer to have as many as 15 franchises in the U.S., although a signature from Ford President Donald Petersen is needed past five. Chrysler Corp. has handled extra dealerships on an ad hoc basis. Both companies, however, still require a 25-percent equity investment on any new dealership.

NADA's Daly said NADA will make reduction of the 25-percent equity requirement one of its major goals in franchise agreement negotiations this year.



Coupe by Baroque

Baroque Motorcars, Omaha, offers this coupe in its lineup which includes a cabriolet, a sedan and three limousines. The car is based on General Motors mechanicals and is priced at $59,900. Prices range up to $185,000 for a limousine based on Rolls-Royce.

Count has risen for 4 consecutive quarters

Domestic dealer total up 54 in half

Continued from Page 1

added 20 franchises apiece in the first half. Oldsmobile picked up 15, and Cadillac, 10.

On the downside were Renault, with a loss of four; Chevrolet, five; VW, 10, and AMC, 24.

Chrysler Corp. had 3,955 car dealers on July 1, up from 3,864 at the beginning of this year. There was a gain of 30 in the first quarter and 61 in the second. It was Chrysler's best first-half performance since 1965 when it added 176 dealers.

Chrysler's gain of 91 compares with a rise of 88 in the first six months of 1983. Chrysler has had seven consecutive quarters of increases.

Franchise totals on July 1 were: Chrysler, 2,980; Plymouth, 2,929, and Dodge, 2,844.

In addition to its 3,955 car dealerships, Chrysler has eight that handle only Dodge trucks. They are not included in the corporation's car-dealership total or in the Dodge car-franchise total.

Ford Motor Co.'s midyear car-dealership count was 5,519, up 11 from 5,508 on Jan. 1. It was Ford's best first half since 1973. Last year, Ford was up 10 for the six-month span.

Franchise totals at the midway point of 1984 were: Ford, 4,693; Mercury, 2,706, and Lincoln, 1,561.

Ford Motor Co. has 107 dealers that handle only Ford heavy-duty trucks. They are not included in the Ford Motor car-dealership total or in the Ford Division car-franchise total.

• General Motors showed little change in the first half, with declines of 10 car dealerships each quarter. The midyear total was 10,020.

Despite the declines, it was GM's best first half since 1979 and compared with a dip of 75 in the 1983 period.

Franchise totals on July 1 were: Chevrolet, 5,150; Oldsmobile, 3,190; Pontiac, 3,000; Buick, 2,965, and Cadillac, 1,605. It was the first time Pontiac had been at the 3,000 mark since the census of April 1, 1982.

The American Motors-Renault dealership total was 1,498 on July 1, compared with 1,526 on Jan. 1. Quarterly slips were 15 and 13. In 1983, the loss was 48 for the first half.

There were 1,416 AMC franchises and 1,352 Renault franchises at midyear. Some 1,270 outlets handle both makes.

AMC has about 760 duals with Big Three makes and nearly 90 percent of them also handle Renault. About half of the 75 AMC-VW combinations have the Renault franchise.

There were 896 Volkswagen dealerships on July 1, down 10 from 906 at the beginning of this year. The decline was just half of the 19-outlet loss in the corresponding period a year ago.

VW has an estimated 140 duals with other makes of U.S. cars.

For the domestic industry, the four consecutive quarters of dealer increases have added 172 establishments to the ranks. The current count of 20,895 compares with 20,723 on July 1, 1983.

Chrysler Corp.'s gain of 230 outlets was biggest factor in the upturn, and Ford Motor Co. was up 95. There were dips of 65 for GM, 43 for AMC-Renault and 19 for VW. A change in the number of intercorporate duals fixed the industry's year-to-year change at 172 establishments.

U.S. dealer total rises to 24,768; duals, imports up

The total number of dealerships in the U.S. is up for the third semiannual census in a row, but the makeup of the dealerships is changing.

The Automotive News dealership census shows a total of 24,768 dealerships in operation on July 1, up 47 from Jan. 1 and 266 from July 1, 1983. It was the highest total since the 25,189 of July, 1982.

There were 3,873 dealers carrying only imports on July 1, another 13,888 handling only domestic cars and 7,007 import-domestic duals.

Import-domestic dualing increased compared both with a year earlier and with the Jan. 1 total. Likewise, the number of import-only dealerships showed increases for both periods. But the number of domestic-only dealerships showed two declines.

U. S. FRANCHISES

GM's late pricing changes seen as strategic move

Continued from Page 2

tion reduced the price of the average GM car by $8, when spread across the whole line. The average price is about $11,600.

Pontiac Fiero models went up an average of $207. New figures are $8,195 for the base unit, $8,695 for the Sport Coupe and $9,795 for the SE.

The Chevrolet Sprint, the Suzuki import that is sold by some 500 Western Chevrolet dealers, went up $202 and is now $5,151. It's more than the Chevette Scooter, which stays at $4,990.

There were reductions of $183 on the Chevette CS two-door and $121 on the four-door. The Pontiac 1000 two-door dipped $185, and the four-door went down $132.

New prices are: Chevette CS — Two-door, $5,299; four-door, $5,508. Pontiac 1000 — two-door, $5,429; four-door, $5,685.

There were a number of equipment additions. Among the more significant: An AM radio was made standard (subject to a delete option) on Chevrolet Camaro, Pontiac Firebird, rear-wheel-drive intermediate models and full-size cars that didn't already have that item. The price hike is $112.

Power brakes ($100) became standard on Chevrolet Celebrity, and the 5-liter V-8 engine was made standard on Buick Riviera and Oldsmobile Toronado. It boosted prices $225.

The optional V-6 and V-8 gasoline engines rose $10 and $15, respectively. The V-6 is now $260 and the V-8 is $390.

On the other hand, the prices of optional diesel engines for intermediate, full-size and personal luxury cars were reduced by amounts ranging from $240 to $700. Diesel sales have been slow.

On intermediate models (both front-wheel drive and rear-wheel drive), the 4.3-liter V-6 diesel was cut $240. It is now $260.

The 5.7-liter V-8 diesel went down $310 on rear-wheel-drive intermediate and full-size models. The price is now $390.

On full-size station wagons, selected full-size sedans and Riviera and Toronado, the diesel is now a no-charge option. It formerly was $700.

Moonroof for A-bodies

Sky-Top Sunroofs, Ltd., St. Louis, is marketing a power moonroof to fit the 1984 Pontiac 6000 STE, Buick Century, Oldsmobile Cutlass Ciera and Chevrolet Celebrity.

GM parts warehouse slated for Alberta

OSHAWA, Ont. — General Motors of Canada said it will build a $12 million, 231,000-square-foot parts distribution warehouse on a 17-acre site in Edmonton, Alta.

It will replace a smaller, leased facility there and employ 100.

Nader group asks NHTSA meeting on tire grading

WASHINGTON.—Public Citizen, the Ralph Nader group which won its lawsuit against NHTSA over suspension of the treadwear grading requirements, wants a meeting as soon as possible after Aug. 1 with NHTSA head Diane Steed. NHTSA has not yet responded to the Public Citizen request.

Meanwhile, all tire companies are not in compliance with the Uniform Tire Quality Grading System and the government has neither appealed the standard nor made any announcement that it intends to obey the court's mandate (issued on June 20, following the April 24 decision) although NHTSA has met with industry representatives.

NHTSA, it is believed, has planned to publish in the Federal Register a new schedule for effectiveness of the treadwear grading. This could take effect as soon as the legal procedures allow for bias and bias-belted tires. But since NHTSA is now taking bids for a radial course monitoring tire, that period will be longer.

Mercedes misses limit in crash of air-bag car

Continued from Page 1

senger and driver: 890 and 734, respectively.

The car's air bag was deployed in the crash.

In the other assessment area considered crucial because of the possibility of death or serious injury, the Mercedes-Benz received chest-deceleration figures of 63 Gs for the driver and 44 for the passenger. The allowable limit in the lower-speed crashes is 60 Gs.

The crash of the M-B 300-SD was the first of a car equipped with an air bag in this series of crashes.

Mercedes-Benz said it does not challenge the numbers generated in the crash but said NHTSA's interpretation of them is questionable.

A spokesman said combined air bag and belt data from simulated accidents is not comparable to belts-only data. NHTSA will have to develop new techniques for evaluating air bags to get meaningful results, he said.

The Nissan 200-SX did well on chest figures (44 Gs for driver and 32 for passenger). In the head-injury comparison, it fared poorly for driver (1992 HIC), although it came in handily under the limit for the passenger (582).

The Toyota Van Wagon showed figures of 984 HIC for driver and 748 for passenger, 50 Gs for the driver-side chest deceleration force and 54 Gs for passenger.

The Toyota's competitor in price, weight and configuration, Dodge Caravan, previously produced HICs of 973 and 1200 and chest figures of 44 and 42.

All three newly-crashed cars fared well in windshield retention and fuel-system integrity criteria. They also had acceptable femur load tests.

The latest round of 35-MPH crashes brings to 31 the number of 1984 models that NHTSA has checked; seven more are scheduled, presumably before '85 models appear.

As U. S. auto industry booms

Execs' compensation soars 40 pct. in 1983

Continued from Page 1

tives suffered the biggest pay declines. Pay for the chairman and president dropped 35 percent from 1982.)

AMC President Jose J. Dedeurwaerder didn't even make the 1983 list because he was paid less than $300,000; he made $250,000 in 1983.

However, the survey, compiled from proxy statements, does not include stock bonuses, stock options, income from stock options exercised nor long-term and contingent remuneration.

If those had been included, all five of GM's highest-paid executives would be over the $1 million mark, and Ford's Caldwell would have a considerably larger lead over the rest of the pack since his total automotive-related income totaled more than $7 million in 1983.

Meanwhile, the pay of executives for Japanese automobile companies held fairly steady.

Contributing to this report were Bob Cook, in Washington; John Hartley, in Japan; and Kathleen Hamilton and Michelle Krebs, in Detroit. The article was written by Krebs.

$20 an hour gap in U. S.-Japan pay

ANN ARBOR, Mich.—Next time a Detroit auto executive starts whining about the gap between labor costs in the U. S. and Japan, two figures from University of Michigan researcher Michael Flynn, co-author of a study on manufacturer-supplier relationships, might be in order:

Cost gap for blue-collar auto workers is $7 an hour; for white-collar workers, it's $20.

REPORTED INCOME OF BIG 4 EXECUTIVES

Executive, Position & Company	1983 Income	1982 Income
Philip Caldwell, chairman, Ford	$7.31 million	$1.16 million
Donald Petersen, president, Ford	$3.76 million	$565,333
Roger B. Smith, chairman, GM	$1.51 million	$565,134
F. James McDonald, president, GM	$1.35 million	$498,184
Lee A. Iacocca, chairman, Chrysler	$648,858	$1.58 million
Gerald Greenwald, vice chairman, Chrysler	$1.10 million	$358,952
W. Paul Tippett, chairman, AMC	$607,116	$376,536
Jose Dedeurwaerder, president, AMC	$291,920	$251,325

Figures include automotive-related income during 1983 as reported in proxy statements. Salaries, directors fees, benefits, income from stock options and stock bonuses with specific dollar amounts attached are included. GM figures include savings plan remuneration. Bonuses for Chrysler executives are not included, since those numbers will not be available until the 1984 proxy statement is issued next spring.

INCOMES OF JAPANESE AUTO EXECUTIVES

Executive, Position & Company	1983 Income*	1982 Income	% Change
Shoichiro Toyoda, president, Toyota Motor Corp.	$1.56 million	$1.30 million	+ 20.0
Katsuji Kawamata, chairman, Nissan Motor Co.	$820,000**	$820,000	0
Takashi Ishihara, president, Nissan Motor Co.	$510,000**	$510,000	0
Yoshiki Yamazami, president, Toyo Kogyo Co.	$195,000	$165,000	+ 18.2
Tadashi Kume,*** president, Honda Motor Co.	$170,000	N.A.	.....

*—Japan's tax law was changed in 1983 and no longer requires that executives' income be made public. In the past, the law required executives to make public their entire income, including that not necessarily automotive-related.

**—Figures are estimates.

***—Became president in 1983. The 1983 income figure does not necessarily reflect his salary as Honda president.

NOTE: List compiled from proxy statements of publicly traded companies, which contain compensation for five top-paid executives. Figure includes salary and bonus, not stock bonuses, stock options, profits from stock options exercised, nor long-term and contingent remuneration. Salaries and bonuses awarded are for calendar 1983 unless otherwise noted.

1—Includes a $296,000 bonus from Marathon Oil Co.
2—Promoted to chairman from president.
3—Promoted to president from executive VP.
4—Mohawk Rubber became a subsidiary of EGH Acquisitions on 1/84.
5—Elected chairman 4/1/83.
6—Resigned 1/18/84. 1982 salary is from General Tire and International Harvester, where he served as president until March, 1982.
7—Named president in 1983.
8—Includes salary only. Bonuses have been awarded but will be made public in the 1984 proxy statement.
9—Elected president 4/1/83.
10—Was vice president during 1983.
11—Died 7/11/83.
12—Was vice president during 1983.

Big Three jockeying to meet CAFEs

Continued from Page 2

ditional product and marketing actions to assure compliance," she said. "Without such a revision, we may have no choice but to curtail production of some full-size trucks and eliminate jobs associated with full production," Petrauskas said.

In other words, Ford will meet the law even if that involves closing plants and putting workers out of jobs.

NHTSA, reporting companies' expectations for model-year '84, said Chrysler — at expected 18.5 MPG — is below the composite 20.0 MPG. Ford in the two-wheel-drive class expects 19.0 MPG, and GM expects 20.7 MPG. The two-wheel-drive standard is 20.3 MPG. In the '84 light-truck four-wheel-drive class, AMC expects 20.8 MPG; Ford, 18.5 MPG, and GM, 20.7 MPG. The standard is 18.5 MPG.

• For model-year '85 light-truck composite, Chrysler expects 20.3 MPG; Ford, 19.2 MPG, and GM, 20.0 MPG. For model-year '86 composite, Chrysler expects 21.5 MPG; Ford, 20.3 MPG, and GM, 20.6 MPG. For model-year '87 composite, Chrysler expects 21.8 MPG; Ford, 20.3 MPG, and GM, 23.5 MPG.

NHTSA realizes it is caught between Ford and Chrysler in deciding on light-truck standards.

If Ford has to close plants and lay off workers to meet the standards, potential Ford customers will shift to other manufacturers with larger engines. Thus, Ford would suffer without any oil savings to the nation.

On the other hand, Chrysler believes its investment will have been wasted. If the agency relieves Ford of paying civil penalties for noncompliance, then Chrysler will suffer even more since Ford could use the money to become an even stronger competitor.

Although in testimony before the House subcommittee, GM did not ask for relief on light-truck standards, it filed a statement in the NHTSA docket supporting Ford's request for slipping the model-year '84 standard from 20 MPG to 19 MPG and the model-year '85 standard from 21 MPG to 19.5 MPG.

Like Ford, GM said the forecast made by DOT when it set the standards in 1980 has not turned out to be true.

And although Chrysler protested Ford's petition for relief and GM's support of that position, Chrysler failed to mention that it petitioned for relief on Sept. 20, 1978, and was granted relief for 1981 light-truck standards.

GM official Richard L. Klimisch gave GM's projection for model-year '84 as 24.8 MPG — one-tenth higher than earlier given to NHTSA.

GM expects to obey the law by using carryback and carryforward and "by including our new joint-venture car and a test procedure adjustment credit . . ."

But GM did not say whether it was counting on the 0.3 MPG CAFE adjustment from EPA which it originally used or the 0.2 MPG being proposed by EPA.

Makers build 523,781 cars for month

July production highest since 1979

By Keith Gave
Detroit Reporter

U. S. auto makers posted their best July production total since 1979, although output declined significantly last week due to model changeovers at Chrysler and General Motors.

Last month, 523,781 units were assembled. That represents a 13.61 percent increase over the 461,046 units in the same period last year and was the best July since 583,765 autos were produced in the U.S. five years ago.

Domestic car production was expected to reach 111,074 last week, down 13.82 percent from the previous week's 128,900. Last week's build was 43.92 percent higher than 77,174 assembled in the same week last year.

Year to date, there have been 4,853,027 cars built in the U. S., 26.28 percent more than the 3,842,995 built in the same period last year.

Of last week's estimated automotive build, GM accounted for 60.51 percent, Ford 32.47 percent, American Motors 4.32 percent and Honda 2.70 percent. Chrysler and Volkswagen were idle for model changeover.

Four Chrysler plants were down. The 3,200 hourly workers at the company's Belvidere (Ill.) plant, joined hourly workers at Newark (N. J.) and St. Louis plants No. 1 and No. 2 on temporary layoff. All four plants are expected to resume production today (Aug. 6).

Three more GM plants were idled for model changeover, bringing to 16,050 the number of hourly employes on temporary layoff. They were: Linden (N. J.), Tarrytown (N. Y.) and Baltimore (Md.).

Linden and Tarrytown are scheduled to resume production Aug. 20. Baltimore will reopen Sept. 10 with production of the new M-van.

The Flint B-line returned to production this week, but the Leeds (Mo.), Willow Run (Mich.) and Wilmington (Del.) plants remained idle for changeover.

The Buick B-line worked two shifts of overtime Saturday (Aug. 4).

Truck production for July reaches six-year high

Domestic truck manufacturers concluded July with their best production total in six years.

Last month, 211,518 units were assembled, compared with 278,020 produced in 1978. The July total was 34.47 percent higher than the 157,293 built in the same period last year.

Truck assembly last week was targeted at 55,982, down 7.88 percent from 60,771 the previous week, but 34.94 percent more than the 41,486 built in the year-ago week.

So far this year, truck manufacturers have produced 1,868,798, which is 39.39 percent more than 1,340,681 in the same period last year.

General Motors scheduled Saturday overtime last week at its Detroit plant. Nissan was down for vacation; production is scheduled to resume Aug. 13.

Sponsor of anti-subsidy bill calls for action by Dingell

Continued from Page 8

that some fleet/lease companies are "bootlegging" by dumping new cars on the market in direct competition with new-car dealers. Following hearings on the bill in June, the FTC opened an investigation into the alleged practice.

"I think we opened their (FTC) eyes on this issue," said Taylor. "What they might do with it, I don't know."

Auto makers and fleet/lease companies have opposed the legislation, contending that their basic markets are different from that of dealers. But Taylor said last week that he could not understand the auto companies' position on the anti-subsidy measure.

"The manufacturers have no reason to be against this bill unless they want to continue bootlegging," he said. "They are way offbase on this one.

"The auto manufacturers are not unlike the Federal Government in a lot of ways," he added. "They have their own bureaucracies. The vice presidents of fleet/leasing probably like their litte domains and perhaps this bill would cause some dislocation for some very high-salaried people."

Taylor said he did not expect the bill to pass the entire Congress this year no matter what happens in the House.

"I quite frankly feel we're not going to get a companion bill in the Senate this late," he said. "But I'd like to get it passed in the House, and we will if John Dingell will do what he said he will do."

Group slates convention for Chrysler owners

DEARBORN. — Rapid Transit System, based here, has slated the 1984 Chrysler Car Club Convention for Aug. 10-12 at the Indianapolis Motor Speedway.

The event is open to all Chrysler, Dodge, Plymouth, DeSoto, Imperial and Dodge truck owners. The fee to be an exhibitor is $25.

July auto output in Canada is best since 1977

Canadian auto makers slated completion of 63,136 cars in July, 31.01 percent greater than the 48,193 finished during the year-ago month. Last month's total was the best since 66,416 cars were assembled during July, 1977.

The industry projected assembly of 14,685 cars last week, down 21.30 percent from the previous week's 18,659 but 14.65 percent greater than 12,809 finished during the year-ago week.

Year-to-date, 662,686 cars have been built in Canada, 10.56 percent ahead of the 599,393 produced during the same 1983 period.

Truck manufacturers targeted completion of 41,730 trucks in July, an impressive 70.89 percent improvement over 24,419 built during the year-ago month. It was the best output for the month since 43,982 in July, 1981.

Canadian makers scheduled 12,771 trucks last week, 77.87 percent better than the prior week's 7,180 and 89.65 percent greater than the 6,734 finished during the year-ago week.

So far this year, 484,323 trucks have been built in Canada, 57.60 percent ahead of 307,306 assembled during the same 1983 period.

Volvo's Halifax (N. S.) facility scheduled vacations last week. The plant is scheduled to return to production Aug. 20.

Chrysler Corp.'s Windsor (Ont.) plant returned to work last week following vacations and projected production of 1,210 Dodge Caravans, 1,197 Plymouth Voyagers and 481 Mini Ram Vans bringing the year-to-date T-115 total to 127,095.

Japanese cars capture top four spots; 11 makes set records

Honda leads in first-half sales per dealer

By Jenny L. King
Staff Writer

The record books were opened and several entries made as new-car sales-per-dealer averages were figured for the first half of 1984.

Dealership totals for both domestics and imports were up some from the January census, and industry sales jumped more than 20 percent, providing good news for the four U.S. makes and seven imports, which posted records.

As has been the case in recent years, dealerships handling Japanese makes earned the highest averages per franchise, with Honda vaulting into first place from third. The Honda dealership total remained steady as retail sales were pumped up by the addition of full production at the Japanese auto maker's assembly plant in Marysville, O.

Toyota dropped into second place, and Mitsubishi overtook Nissan to occupy third. Nissan was fourth. Then, and only then, came a domestic make, Oldsmobile, which climbed to a record 192 sales per franchise, erasing its earlier record of 164 chalked up in the first half of 1977.

Oldsmobile has been the top U.S. make for the first half of the calendar year since it unseated Chevrolet back in 1981. Fifth-place Oldsmobile followed this time by Buick's record 168 sales per franchise. Chevrolet shared sixth place with Buick, showing substantial progress from its year-ago 129 average. Chevrolet's best was 218 in the first six months of 1973.

• Ford dealers boosted their average to 141 from 112, changing their position in the lineup to eighth from 10th. Volvo shared eighth place with Ford and notched a record for itself with the 141 average.

Pontiac claimed 10th position at the 1984 midway point, its franchise average mushrooming to 127 from 85. The Pontiac record is 141, set in 1978. Chrysler (55) and Renault (68) also set first-half records.

Other first-half records belonged to Mercedes, Audi, BMW, Volvo, Saab, Jaguar and Peugeot, whose dealer numbers were stable while sales moved at record paces.

Mercedes's 97 average sur-

Toronado for '86

Jim Dunne

Smaller, but not small

The '86 Oldsmobile Toronado will lose six inches in wheelbase and 20 inches in overall length and will check in next fall with dimensions of 108 and 186, respectively. Standard engine will be Buick's fuel-injected V-6, with the Olds 4.3-liter diesel as an option. The '86 Toronado will be built at General Motors' new Poletown plant in the Detroit area along with Buick Riviera and Cadillac Eldorado and Seville.

Domestic car supply sliced; inventory stands at 47 days

By Kathleen Hamilton
Assistant Managing Editor

Changeovers and vacations at assembly plants helped trim the number of new domestic cars in dealer and factory inventories last month. It was the fourth month in a row in which the stockpile was reduced.

On Aug. 1, it stood at 1,297,864 cars—an anemic 47-day supply.

One month earlier, there were 1,445,799 domestics in inventory—a 52-day supply. On Aug. 1, 1983, the stockpile stood at 1,102,103—worth 48 days then, when sales were slower.

If the daily selling rate had not declined slightly during July, the Aug. 1 stockpile would have been even shorter. As it was, every car maker and division except Honda reported lower inventories than on July 1. Honda's stash of domestic Accords was up by only 250 cars.

And only Buick and Oldsmobile reported increases — slight ones at that—in their days-supply figures, due to slower sales.

At Oldsmobile, the sales decline could be attributed in part to scattered shortages in some popular lines. At month's end, the division had a better balance of cars than when the month started, although its inventory total changed only slightly.

The Buick Electra was among the lines in shortest supply on Aug. 1: There were only 21 days' worth left. The Cadillac DeVille/Fleetwood days' supply figure of 19 was even tighter, and a big drop from the 26 days' supply on hand July 1.

Pontiac Fieros hardly stopped in showrooms at all on their way to customers' garages during July. The Fiero supply stood at 17 days, down from 20 a month earlier.

Domestic Honda Accords clearly suffered sales losses during the month because of shortages. The days' supply rose from 15 to 19, but it was because of slower sales due to shortages, not the handful of extra cars that were in inventory at the close of July.

Chrysler division, American Motors and Volkswagen all trimmed their days' supply fig-

As early as 1976, witness says

VW knew of oil problem, FTC told

By Jake Kelderman
Washington Reporter

WASHINGTON. — Volkswagen of America knew of the existence of an alleged excessive oil-consumption problem in some of its 1974-79 cars in the spring of 1976 or before, according to testimony recently given before an FTC administrative law judge.

VWoA has been locked in combat with the FTC for three years over the alleged problem with as many as one million of its Rabbits, Sciroccos, Dashers and Audis.

Volkswagen introduced the water-cooled Rabbit in the U.S. in 1975. Within a year of that introduction, reports began to appear of alleged excessive oil usage in the car and its sister vehicles.

In April, 1981, the FTC sued VWoA, alleging that the company failed to tell consumers of the "potential for engine, valve and cylinder-head repair related to high oil consumption in 1974 through at least 1979 VW and Audi water-cooled engines."

According to the FTC complaint, the alleged excessive oil consumption of Rabbits, Sciroccos, Dashers and Audis usually began to show after 20,000 to 30,000 miles of use and typically resulted in engines using a quart of oil every 200 to 600 miles.

The FTC said that although VW knew — or should have known — of the problems, the company did not give that information to owners or prospective buyers of the affected vehicles, thereby keeping from them information that would likely have affected their decision about buying and maintaining the vehicles.

• VW denied, and continues to deny, the allegations. The auto maker asserts that the alleged excessive oil usage does not exist.

In recent testimony before the FTC by VW mechanics and service personnel, statements were made and physical evidence introduced to indicate that VWoA did indeed know of the alleged problem in 1976 or before and that it was working on a fix for it, although the precise reason for the alleged excessive oil consumption was then apparently not known.

One of those who testified before the FTC was Paul Tierney, service department field manager for Worldwide Volkswagen Corp., Orangeburg, N. Y.

Chevy Sprints appear at unauthorized deals

By Richard Johnson
Detroit Reporter

The three-cylinder Suzuki minicar being marketed as the Chevrolet Sprint in nine Western states is reportedly turning up on dealers' lots elsewhere in the U. S. without the blessings of either the manufacturer or Chevy.

The Japanese model is apparently trickling into the U. S. via such countries as Puerto Rico and Guam, and thereby getting around Japan's voluntary export restraints.

Chevrolet is sufficiently peeved to have begun discussions with Suzuki on how to curb the problem. However, a spokesman admitted, "We're not even sure Suzuki has control over it."

Unauthorized Japanese imports have been finding their way into this country in growing numbers ever since limits on Japan's shipments were imposed in 1981. The practice is legal since restraints are not set by U. S. law, but imposed vol-

Fisher Body and GMAD are casualties of reorganization

2 major divisions disappear from GM scene

By John K. Teahen Jr.
Managing Editor

General Motors has slammed the lid on two old and important divisions that became casualties of the corporate reorganization program.

They are Fisher Body and General Motors Assembly Division. Their work goes on, of course, but the names are gone.

Also out of existence is the Body and Assembly Group, which consisted of those two divisions.

All GMAD plants will be operated by the passenger-car supergroups — Chevrolet-Pontiac-Canada and Buick-Oldsmobile-Cadillac. The Fisher Body plants go to the car groups or to Fisher Guide Division or Inland Division.

And what of the "Body by Fisher" badge that has adorned every GM car since time immemorial? It's fate is uncertain. GM has not decided whether it will be retained.

The final note for the Body and Assembly Group and Fisher Body was sounded last week as Vice President Charles Katko, who headed both, was transferred to another job. Vice President Patrick J. Coletta, who had been GMAD general manager, was given new duties in July.

In addition to Katko's reassignment, last week's personnel action brought the election of two new vice presidents, the retirement of another VP and the appointment of new general managers for two component divisions.

Katko, 58, was named group executive in charge of the Worldwide Truck and Bus Group. The post had been vacant since Donald J. Atwood became an executive vice president last Jan. 1.

W. Blair Thompson, 56, was elected a vice president and named group executive in charge of the Mechanical Components Group. It was a double step up the executive ladder for Thompson, who had been general manager of Saginaw Steering Gear Division.

As head of the Mechanical Components Group, Thompson succeeded Paul D. Pender, 58, who retired after 41 years with GM.

John D. Debbink, 60, was elected vice president in charge of the Materials Management Staff. He replaced Robert D. Stone, who recently was named managing director of General Motors de Mexico.

Debbink played a major role in the GM reorganization. He headed a task force that did the detailed study that resulted in the changes. He has been general manager of Inland Division since April of this year.

Ross M. Haun, 52, succeeded Debbink at Inland. He formerly was general manufacturing manager of truck and bus operations for the Worldwide Truck and Bus Group.

The new general manager of Saginaw Steering Gear Division, succeeding Thompson, is Mark R. McCabe, 52. McCabe formerly was general manufacturing manager for the division.

• The end of Fisher Body as a division takes from GM a name that is older than GM itself. Both were founded in 1908; Fisher on July 22, GM on Sept. 16.

The first association of the

Safety only one part of House auto bill

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — A wide-ranging auto safety bill by Rep. Timothy Wirth, Colorado Democrat, has the partial support of diverse groups but is not expected to be passed this time around.

The Administration position, expresed by NHTSA head Diane Steed, was described by Wirth as "flabby" at a hearing last week. He ordered her to report by Sept. 1 to the House Energy and Commerce Subcommittee, which he chairs, with firmer positions and explanations of why many of the bill's items require "further study."

The bill contains odometer provisions that lured dealer support but it also collected dealer opposition by proposing to require dealers to repair defects on new and used cars before sale or lease. NADA claims the latter provision would be unworkable and burdensome.

The bill contains strong action against gray-market cars — which both dealers and auto makers embrace. On the other hand, the manufacturers were turned off by another section requiring possible jail terms for "knowingly and willfully" withholding critical data from the government and the public about safety-related defects.

The bill contains two provisions to require NHTSA to develop numerical systems for rating and disclosing the crashworthiness of cars and the effectiveness of their bumpers — provisions supported by consumer activists but declared impossible by NHTSA and the auto makers.

In yet another section — that appears on the surface almost innocuous — the bill calls for a study by the National Academy of Sciences on the effectiveness of periodic motor vehicle inspection.

However, NHTSA opposed this as "very costly and difficult to implement."

• Besides a curb on odometer rollbacks, the only section of the bill that came out unscathed was a minor change in the way tire dealers handle tire registration (needed to allow defect notification and recall).

This change would allow tire dealers to use computerized manufacturer systems instead of merely handing a registration card to the tire purchaser — but even here, NHTSA would like language changes.

Rep. John Dingell, Michigan Democrat, said that although he was pleased by attention to his proposal dealing with odometer fraud, he could not support the total bill "because it is combined with a number of unrelated matters, some of which are controversial, costly and have dubious value."

If the chairman of the full committee cannot swallow the measure, that stops action for at least this Congress.

The bill, however, did receive enthusiastic support from the Center for Auto Safety although its executive director, Clarence Ditlow III, did not address all sections.

Ditlow backed the section

Rogers' Rascal for open air

The Rascal targa convertible, manufactured by Rogers Intr Auto, Vancouver, B. C., is scheduled for production in 1985. Wheelbase is 88 inches, on an overall length of 126 inches. Estimated fuel economy is 60 MPG. The Rascal will also be available in a microvan model.

Baldrige lists guides for curbs on Japan

By Michelle Krebs
Financial Editor

The Reagan Administration won't take a stand on extending voluntary export restraints on Japan until labor negotiations conclude and the auto industry's year-end results are in, Commerce Secretary Malcolm Baldrige said last week.

The year-end results and the outcome of negotiations will be the major factors in the Administration's decision, said Baldrige, who was in Detroit to honor General Motors for its contributions to minority-owned businesses.

Baldrige stressed that wages for labor as well as management salaries must be addressed in terms of increased productivity.

"It's clear there's a productivity race worldwide . . . and don't think it's just worker productivity," he said. "It's management productivity, too. We have to pursue increased productivity with all the resources we have.

"You can afford to pay more if productivity goes up," he said.

Baldrige noted that although the industry is enjoying record dollar sales and profits, it will take more than one good year to recover losses from three bad years.

• Baldrige's comments were toned down from those made earlier in the year. Like other Reagan Administration officials, including Trade Rep. William Brock, Baldrige had voiced his preference not to extend the restraints on Japanese car exports to the U. S. when they expire March 31, 1985, particularly in light of the large bonuses paid to U. S. automobile executives.

However, during President Reagan's recent trip to Michigan, it was reported that the Administration was leaning toward an extension of some form of trade restraints.

Baldrige admitted his previous lack of "enthusiasm" for the extension but said: "I haven't made up my mind. We all need to keep our minds open until the year-end results are in."

As for the economy, Baldrige sees growth continuing through 1985.

"The economy is going to keep on growing through the next year," he said, "but growth will be more moderate, and we want that to happen."

He said the higher-than-expected growth rates of the first two quarters of 1984 would rekindle inflation if those levels are sustained.

Eager buyers snap up Jaguar stock in a flash

By Richard Feast
European Editor

LONDON. — There were scenes of complete pandemonium here Aug. 3 when the Jaguar share offer closed.

Early estimates were of an eightfold over-subscription, which meant more than $3 billion chasing shares with a face value of just under $400 million.

The panic buying — the city has seen nothing like it in years — was spurred by the hope of future gains. There are investors who buy cheaply in the expectation of a big rise, when they re-sell for a quick profit.

Crowds beseiged one bank, Barclays, beginning at at 6:30 a.m. As the offer closed at 10 a.m., pin-striped-clad investors were squatting on the floor completing applications, struggling with each other to reach the counter and throwing their checks and applications at bank employes.

The 178 million shares on offer had a fixed price of about $2.20 (165 pence). The expectation was of an immediate rise of at least 35 pence.

Just how the applications would be scaled back to match the offer was being decided last week (Aug. 6-10).

The private floatation of Jaguar is part of a broad British Government aim of selling off state-owned assets. As a former part of BL, Jaguar will be followed into the private sector by other divisions like Unipart and, over the long term, Land-Rover.

The sale has not been without controversy and the oversubscription led to a renewed attack by opposition politicians. They charged that the taxpayers had been "swindled" by the "knockdown" pricing of Jaguar.

There is a belief, however, that the price set by BL and its merchant bankers, Hill Samuel, is appropriate in view of the longer-term uncertainties faced by Jaguar.

While Jaguar is currently very profitable, it is largely as a result of a factor beyond the company's control: Exchange rates. Indeed, the sale offer made clear just how sensitive Jaguar is to these variations.

During 1983, the pound-dollar exchange rate averaged 1.52, giving a pre-tax profit of 51 million pounds. But the document shows that at $1.20 to the pound, there would have been a loss of 5 million pounds.

The unpredictability of exchange rates means Jaguar will offer no full-year profit forecast. It merely says that in the first six months of this year, the pre-tax profit was 41 million pounds compared with 25 million pounds one year earlier.

One unexpected development is the great interest shown by overseas investors in Britain. Any fall in the value of the pound will merely aid Jaguar's profitability because it is a major exporter.

Other reasons for the comparatively modest valuation of Jaguar stem from:

Its heavy dependence on one market (the U.S.); a narrow breadth of business in comparison with its rivals; the unknown qualities of the next-generation model, the XJ40, which is due to appear late next year, and the long-term requirement for some substantial investments to broaden the model appeal.

U. S. new-car sales rise 12 pct.; imports decline

Domestics prompt July sales gain

By Jenny L. King
Staff Writer

July new-car sales kept well ahead of the year-ago total as the market continued to grow despite unsteady interest rates on consumer loans. Actually, it

Tables on Page 44.

was the domestics that accounted for the overall 12.51-percent July increase: U. S. cars were up 18.59 percent while the imports dropped 3.87 percent.

Domestic sales were up for the seventh consecutive month this year. The third-period 15.73-percent climb brought to 20 the number of reporting periods in which sales have been up from '83 levels.

Imports, on a teeter-totter since the first of the year, were down for the fourth time in seven months in July. Their year-to-date total was a scant 1.05 percent above the 1983 level through the seventh month.

Industry sales in July numbered 890,202, up 12.51 percent from 791,242 last year. Domestics totaled 684,112, up 18.59 percent from 576,864, and imports added to 206,090, down 3.87 percent from 214,378 a year earlier.

The imports' share of the market dropped to 23.15 percent in July from 27.10 percent last year.

Seven-month sales totaled 6,369,161, 19.36 percent ahead of 1983's 5,335,650. Included in the grand total were domestic sales of 4,930,455, which were 26.04 percent ahead of the 3,911,893 units retailed a year earlier, and import sales of 1,438,706, which were up 1.05 percent from 1,423,757.

• All the major domestic auto makers reported sales increases in July. Those plusses ranged from 7.57 percent for Volkswagen to 108.99 percent for Honda.

General Motors was up 14.63 percent, to 398,858 from 347,966 last year. Ford Motor Co. reported passenger-car sales of 162,568, up 25.67 percent from 129,358 — the largest year-to-year gain among the Big Three. Chrysler was up 10.57 percent, to 82,691 from 74,785.

American Motors, propelled by record Renault Alliance/Encore sales, was up 69.65 percent, to 23,763 from 14,007. Honda reported sales of 9,624, just more than twice the 4,605 of a year ago, and VW logged 6,608 sales, up 7.57 percent from 6,143.

With 25 selling days in the month both this year and last, the most recent daily rate of 27,364 was up 18.59 percent from 23,075.

GM's 58.30-percent share of the July domestic market down 2 percentage points from 60.32 percent a year ago. Ford climbed to 23.76 percent from 22.43 percent. Chrysler was off at 12.09 percent compared with 12.96 percent. American Motors claimed 3.47 percent, up from 2.43 percent, as VW dropped to 0.97 percent from 1.06 percent and Honda went to 1.41 percent from 0.80 percent.

Where auto market was in July

	Total Sales	Pct. of Total
SUBCOMPACT	129,355	14.53
COMPACT	168,316	18.91
INTERMEDIATE	213,624	24.00
STANDARD	99,632	11.19
LUXURY	73,185	8.22
IMPORT	206,090	23.15
TOTAL	890,202	100.00

• Three makes — all GM makes —boasted record sales for July. Cadillac was up 13.36 percent to a record 27,973 from 24,676 a year ago. Record Buick sales of 77,281 were up 5.54 percent from 73,221 a year earlier, and the 88,384 sales reported by Oldsmobile dealers was a record, up 7.72 percent from 82,051.

Pontiac had the largest increase among the GM car divisions, up 26.07 percent to 62,872 from 49,869, and Chevrolet, up 20.48 percent to 142,348 from 118,149, claimed the best-selling nameplate for the month in its Cavalier, which recorded 35,314 deliveries.

Import sales in July included only a few records, with the Japanese makers restrained by government-established export limits and the German manufacturers severely handicapped by a long strike. Saab reported record sales, Jaguar topped its year-ago record and Volvo had an any-month sales high.

German makes hit by the strike included Audi, down 11.45 percent; Porsche, down 68.29 percent, and Mercedes-Benz, down 61.34 percent. BMW was unscathed, down just 0.70 percent and Volkswagen was up 17.67 percent.

Other sales ups and downs included: Toyota, up 3.53 percent; Subaru, up 12.19 percent; Nissan, down 12.02 percent; Mazda, up 13.35 percent; Plymouth Colt, down 34.44 percent; Dodge Colt, down 26.03 percent; Mitsubishi, down 18.53 percent; Isuzu, down 26.59 percent; Peugeot, up 23.56 percent, and Renault, down 72.85 percent.

• Domestic intermediates accounted for the largest single segment of the July market, 24.00 percent. Imports were next at 23.1 percent, followed by compacts at 18.91 percent, subcompacts at 14.53 percent, standards at 11.19 percent and luxury models at 8.22 percent.

A year earlier, intermediates had 26.05 percent, imports claimed 27.10 percent, compacts had 17.13 percent, subcompacts had 11.76 percent, standards had 12.85 percent and luxury models had 5.11 percent.

Excluding imports, intermediates had 31.23 percent of the July market, compacts had 24.60 percent, subcompacts had 18.91 percent, standards had 14.56 percent and luxury cars had 10.70 percent.

Third-period domestic sales were up 15.73 percent, to 271,260 from 234,386. The daily-selling rate figured to 30,140, up 15.73 percent from 26,043.

GM was up 11.60 percent with sales of 155,616 new cars. Ford was up 20.49 percent based on sales of 65,026. Chrysler's 32,073 total was up 6.44 percent. AMC was up 87.62 percent; VW was off 4.58 percent and Honda was up 165.23 percent.

Third-period market shares for the domestics were: GM, 57.37 percent; Ford, 23.97 percent; Chrysler, 11.82 percent; AMC, 4.09 percent; Honda, 1.58 percent, and VW, 1.17 percent.

Barron Chevy opens

DANVERS, Mass. — Barron Chevrolet has opened here.

The European car sales race at mid-year

Manufacturer	6 mos., 1984	Market share	6 mos., 1983	Change on '83

Fight for first in Europe

Ford chomping at the bit for top spot

By Richard Feast
European Editor

There is a growing belief that by the end of August Ford will be back in the lead in the European sales race. If it is, Ford will not so graciously concede the 1984 title to another rival, just as it did last December to Renault.

Unofficial statistics for the first half of this year show Fiat Auto still in the lead. But its advantage over Ford in the first quarter — 30,000 units — was halved to 15,000 by the end of June.

The turning point may happen in the UK in August. While the rest of Europe goes on holiday, British car buyers emerge in hordes. August is the peak sales month each year in the UK — where Ford is the market leader outselling Fiat by 10 to one.

Last August Ford registered 115,800 passenger cars in the UK, compared with Fiat Auto's 11,500. While Ford's market share is down slightly and Fiat's is static, overall car demand in the country this year is up.

Thus Ford could end up with a 100,000 advantage over Fiat in the UK this month. The UK market is sufficiently large — No. 3 in Europe — to have a major influence on the overall European standings, especially when the rest of the continent records its lowest sales month of the year.

The artificially high August demand in the UK is a traditional one caused by the introduction of a new annual registration plate suffix. Last August sales of nearly 375,000 amounted to 21 percent of the whole year's total.

Gaining the leadership in Europe's six-way sales race would be a major move for Ford. It led for 11 months of last year, only to be overhauled by the slimmest of margins by Renault in the final month of the year.

This year there have been major management changes at Ford of Europe, with the chairman and president suddenly departing and former chairman Robert A. Lutz returning to take up his old job.

Sustained carping about the comparative sales failure of the curvaceous Sierra has further affected company morale. So, too, has the staggering progress made by arch-rival General Motors and its Opel and Vauxhall brands. From being a distant sixth, GM is now in the leading pack along with Ford, Fiat, Renault and the Peugeot and VW groups.

The GM advances in the past couple of years have frequently over-shadowed Ford's less spectacular but more sustained sales performance over the past decade. The results have not been lost to Giovanni Agnelli, Fiat chairman, who believes, "The most dangerous European companies are the U. S. ones. They have made huge profits in the States and can carry out aggressive marketing policies in Europe, where they have bought market share."

This race within a race is, indeed, a feature of the European market. None of the Big Six is as closely matched as one year ago, when a mere 68,200 units and 1.2 percentage points separated the leader, Ford, from sixth position GM.

At the end of June this year the difference was 134,100 units and 2.7 percent between Fiat and Renault in sixth. The French company, Europe's No. 1 for most of the 1980s, is having its worst sales performance for many years.

New car registrations totaled 5,634,200, a fall of 2 percent from the same period last year. The major markets of West Germany and France were down—one of the causes of Renault's problems--while Italy and the UK made further gains.

Between them, these four countries account for three out of four new cars sold in Europe. The French and German losses (192,100 together) were in no way compensated by the gains from Italy and the UK (65,100). The next largest markets, Spain and the Netherlands, dropped as well, but Belgian and Swiss car buying was up. The unit deficit for the 16 countries at the end of June was 117,500.

The German half-year deficit requires a little explanation. Up to the five-month period, demand was runing 5.5 percent ahead of the previous year. But the metalworkers' strike, coming on top of uncertainty about emission regulations, sent June into a 40 percent decline.

On a cumulative basis, by the end of June the advance had been wiped out. Total German registrations were down 3.1 percent, or 43,700 units.

Japanese importers took advantage of the uncertainty, pushing their market share from less than 10 percent to a record 16.5 percent in June. For the six months as a whole, Japanese business in Germany increased by 25,000 units, from 9.7 percent of the market to 11.8 percent.

Significantly, though, it was the only overall gain made by the Japanese in any European country. In each of the other 15 countries their market share fell, whether demand was up or down.

The hiccup in the Federal Republic is not believed to be a permanent one. If not, it will be a further bonus toward Ford's run for the lead. The company has a solid chunk of more than 12 percent of the continent's largest national market. It has made further share gains in France, though it has lost a little in the UK and Italy.

Fiat's advance is across the board, though it has lost share in the tiny Greek and Irish markets and has only maintained its proportion of UK business. It has all added up to an overall 7.6 percent improvement to 748,600 units.

It has gained a little more in Italy, but at about 55 percent it may have reached its ceiling. The country has been an unhappy hunting ground for all importers, however.

Each of the leading makers has lost share in Italy, not the least Renault, which until recently was the second most sold name in the country. Now it is behind Fiat's Lancia division as well as Alfa Romeo — a company which has also gained share in its domestic market.

Renault's unfortunate first half sales returns are partly a reflection of the lower demand in France. It has also lost share in Spain and Portugal, where it is market leader, and in major export markets like the UK, Switzerland, Italy, Holland and Belgium. It has managed to hang on to its (previously reduced) shares in Germany and Austria this year.

It adds up to a 16.2 percent fall in sales to 599,300, or 10.6 percent of Europe. Renault's fortunes will undoubtedly improve next year, following the replacement this fall of the best-selling R5 with a new generation model. The company is making gains with its new R25 big car, though the lower volumes in this category cannot disguise the drop-off in demand for R5 and the medium range R18.

Renault is now behind its big French rival, PSA, both in the domestic market and in Europe as a whole. But PSA's result (down 5.2 percent to 641,000), hides the fact that Peugeot is booming. That also disguises the fact that of the Peugeot model range, the only one doing well is the new 205.

While Peugeot registrations are up by almost a quarter, demand for Talbots is down about 46 percent. As the two are sold side-by-side by the same dealers, Automobiles Peugeot's units are down 4.4 percent at 377,600. With strong demand for 205, the company is in danger of becoming too reliant on one model. Already, it has lost much of its traditional large car appeal to Renault — a company which, ironically, built its reputation as a small-car builder.

PSA's Citroen models, sold through a separate dealer network, are down around 6.3 percent at 253,500. Citroen, too, is looking unhealthily like a single-model company, as its BX takes demand away from the GSA and its big CX loses out to the new R25.

The slackness in French car buying stems in part from economic uncertainty over the Mitterand government's policies. This year's decline follows two years of exceptional buying, when volumes hit more than 2 million units annually. Thus, in a country where motorization is already high, many people have been recent new car purchasers.

That, however, does not fully explain the continuing rise in imports. In the first half of this year they took a record 35.3 percent, nearly four percentage points more than one year earlier. Ford, Fiat Auto and GM were up, though VW group fell. □

Austin Rover's Mini has been on the market for 25 years. To commemorate its silver jubilee, a limited edition known as the Mini 25 has been introduced. The most luxurious production Mini ever, only 5,000 will be built.

Britain's DeLorean affair

Rumbles over "misuse of public resources"

Still the inquest into the DeLorean affair rumbles on in Britain. The latest verdict, from the House of Commons Committee of Public Accounts, is scathing.

The affair represented "one of the gravest cases of the misuse of public resources to come before us for many years." The latest verdict states that John DeLorean squandered British taxpayers' money to the extent of 77 million pounds — equivalent to just over $100 million at today's rates but actually much more during the active life of the company when sterling was stronger.

It has particular criticism for the way in which officials succumbed to John DeLorean's pressure and completed the agreement in two weeks. It says no financial checks were run on DeLorean, and that the final agreement left the man with almost total control and with no financial risks.

DeLorean, a man with considerable flair and an insider's knowledge of the auto industry, was dealing with a group of people with no engineering expertise in the area. The committee criticized officials for not heeding the (rushed) report by McKinsey & Co. which warned of an "extraordinarily risky venture."

The report reserves its main complaints for the Northern Ireland Department of Commerce and the Northern Ireland Development Agency. These include the people from NIDA who served at various times on the board of DeLorean Motor Cars — named as A. H. Fetherston, S. Harte, R. J. Henderson, A. S. Hopkins and J. Sim.

NIDA "stands indicted" by the disappearance of the $17.65 million paid by two DeLorean companies to GPD in Switzerland. None of the money went into its intended purpose of developing the car.

"Hardly any of those who dealt with (DeLorean) on behalf of the British taxpayer at a high level can escape substantial blame or criticism," maintains the report.

The Public Accounts Committee, chaired by Labor MP Robert Sheldon, has gone about as far as it can. It is not empowered to question government ministers, but says the absence of this should not be construed as being uncritical of them.

The DeLorean venture was begun under a Labor administration and further funding was provided by the subsequent Conservative government. The PAC does not question government policy — rather the implementation of that policy.

The only people to escape censure by the report are the line workers whose jobs were lost by the Belfast closure. They were called "skilled, flexible and dedicated." In many cases the real incompetents of the affair, the administrators and politicians, continue to thrive. □

Agnelli

Continued from Page 27

and IFI would probably never have allowed the time anyway. His sister, Susanna, however, is one of the country's best known politicians. She is a Republican senator and vice minister for Foreign Affairs.

For business Agnelli dresses in conservative blue or gray suits, though he professes to be happiest in casual clothes such as he wears while sailing his yacht, Capricia. An Italian designer says Agnelli has a studied casualness about his appearance —which might explain why he always wears his wristwatch over his shirt cuff.

At 63, Giovanni Agnelli is now one step removed from the daily running of Fiat. But he is still its best known figure. Indeed, a recent magazine poll in the country put the Fiat chairman's profile ahead of the men who were then prime minister (Craxi) and president (Pertini). □

world news briefs

Rumanian goes west

Citroen dealers in France, Italy, Holland and Belgium have begun selling a Rumanian-made three-door hatchback known as Axel. The car, which slots between the Visa and LNA models, was designed by Citroen and built by Oltcit at Craiova. The joint venture — 36 percent for Citroen and the rest held by Rumanian authorities — was agreed in 1976.

Mercedes keeps trucking

After Turkey (AUTOMOTIVE NEWS, June 18), Daimler-Benz is planning increased involvement in Egypt and Mexico. The Egyptian venture concerns assembly of medium and heavy trucks with Misr Auto Trading Co. For Mexico, where selling requires local production, the company's interest is in trucks and diesel engines.

Cost of the strike

Volkswagen chief executive Carl Hahn reports that the metalworkers' strike in West Germany has had a $175 million "negative influence" on after-tax profits.

Peugeot postpones engine

The Peugeot group has postponed "for two or three years" its plans to manufacture a joint 1-liter engine design with Fiat. The Italian company will unveil its version of the project, dating back to 1980, this fall. PSA emphasizes it will build its version at a factory in France when it is needed.

Lotus back in profit

Group Lotus returned to profit last year with a surplus of 275,000 pounds ($357,000) in 1983. The previous year's loss was 2.14 million pounds. Turnover was up 36 percent at 12.8 million pounds ($16.6 million).

Change at Bosch

Dr. Hans Merkle, for 21 years chairman of Robert Bosch, has retired. His place has been taken by Dr. Marcus Bierich, former finance head of the Allianz insurance group. Merkle said sales will increase this year by 6 percent (to $5.3 billion), compared with the anticipated 10 percent due to the metalworkers' strike. Bosch was one of the key targets in the seven-week dispute.

New man at Ogle

Siep Wijsenbeek, former head of design for Netherlands Railways, has joined the British design company, Ogle, as director of transport design.

VW swap

The VW group has changed the chief executive of its Triumph Adler subsidiary. Wolfram Nadebusch, former managing director of VW of Nigeria, replaces Dr. Pieter Niedmar, who left the company unexpectedly.

Talbot improves

PSA's Talbot subsidiary in Spain reduced its deficit by 37 percent last year to Pta 8 billion ($50 million). The former Chrysler Europe unit hopes to reduce its workforce from today's 8,700 to 6,500 by the end of 1985.

New electric

Sinclair Vehicles' proposed electric run-about — to be launched early next year — will cost under 1,000 pounds ($1,300).

Ford-Werke falls

Ford of Germany's profits fell 54 percent last year to DM 151 million ($54 million), despite a 12 percent rise in turnover ($4.75 billion). Chief executive Daniel Gouedevert said margins were down because of vastly increased marketing costs.

Another PSA conflict

The French government has once again rejected PSA plans to cut its Citroen workforce by up to 2,200. In total, Citroen wants to slim its payroll by 15 percent (6,000) by using early retirement and voluntary repatriation for immigrant workers.

Opels shape up

GM's Adam Opel is contributing one-fifth the cost of Stuttgart University's $9.4 million wind tunnel, to be completed in fall of 1985. Maximum speeds of 125-MPH will be measured in the full-size tunnel, while a tunnel for one-fifth scale models will be capable of speeds of nearly 145-MPH. In the past, Opel used tunnels belonging to GM, Pininfarina and an independent Dutch-German facility.

Opel goes top

GM's Adam Opel operation moves into market leadership in two more European countries in the opening quarter of 1984. A 20 percent sales increase in Switzerland takes the top spot from the VW-Audi Group. In Denmark a gain of more than 60 percent overtakes arch-rival Ford for No. 2 spot.

Bridgestone profits

Bolstered by the Japanese and worldwide economic recovery, Bridgestone Corp., world's fourth-largest tire maker, headquartered in Tokyo, earned $35 million in the first six months of its 1984 fiscal year ended June 30, an increase of 23 percent above earnings of $29 million in the prior year period.

Pininfarina speaks

Sergio Pininfarina, president of Pininfarina, Turin, Italy, will deliver the third Sir Henry Royce Memorial Lecture in London at the British International Motor Show, Oct. 15. His subject is "Aerodynamic Considerations in Vehicle Design."

FADA convention slated Oct. 28-31

TORONTO. — The Federation of Automobile Dealer Assns. of Canada will hold its 43rd annual convention and trade show here Oct. 28-31.

The event will be held at the Sheraton Centre. Over 75 exhibitors will participate in the trade show, making it FADA's biggest ever.

In UAW bargaining with GM and Ford

Absenteeism continues as plank

By Marjorie Sorge
Labor Editor

Solving the absenteeism problem is once again a plank in contract talks this year as the UAW bargains with General Motors and Ford Motor Co.

There is already some controversy between the union and GM. The UAW wants to eliminate the absenteeism program which connects chronic absenteeism directly to the workers' benefits.

The program, negotiated in 1982, cuts the benefits of workers who miss 20 percent or more of the scheduled worktime by an equal percentage. The penalty holds for six months, after which the worker's attendance rate is reviewed.

The UAW claims the company has abused the program, punishing workers who were legitimately off the job. GM wants to build on the program.

The Ford pact with the UAW does not contain such a program but there is a letter of understanding and a commitment from both sides to work on the problem, basically at the local level.

Donald F. Ephlin, UAW vice president and head of the union's GM department, has indicated this kind of approach might be acceptable at GM.

Chrysler also has an absenteeism program. It does not penalize the AWOL workers but is aimed toward progressive self correction through counseling.

The absenteeism rates at the auto makers have remained relatively stable over the past three years, moving only a few tenths of a percentage point.

Company officials say the joint company/union relationships have played a big role in reducing the number of AWOL workers, as have the absenteeism programs.

• In addition, many workers were laid off during the recession and have just recently been recalled. They need the money, are worried about keeping their jobs and don't feel they can take the time off.

With the boom in the auto industry, there is the possibility that absenteeism could rise a little. Heavy overtime scheduled during these periods can cause an increase. The union maintains that reducing overtime will help cure the absenteeism problem. The reduction of overtime is another plank in the union's demands at Ford and GM this year.

Short-term absenteeism rates at GM have risen slightly in the past 18 months, from 3.2 percent in 1982 to 3.3 percent in 1983 to 3.8 percent for the first three months of 1984. Short-term absenteeism is classified as less than one week.

GM's totally controllable absences, which include sickness, casual AWOL and excused, have dropped, however, from 9.0 percent in 1983 to 8.9 percent through March of this year. The contractural absences dropped from 5.2 percent in 1983 to 3.5 percent through March of this year.

At Ford, the short-term rate increased only slightly from 3.5 percent in 1983 to 3.7 percent through June of this year. It was 3.7 percent in 1982.

The combined short and long-term rate has remained stable in the last 18 months at 6.4 percent. The AWOL rate was 1.7 percent in 1983 and 1.8 percent through this June. The medically related absences were 2.9 percent in 1983 and 2.8 for the first six months of this year while other excused time off was steady at 1.8 percent in both years.

The rates of the Big Two, as well as the other auto makers shown on the accompanying chart, cannot be compared since each maker measures absenteeism differently.

At Chrysler, the rate dropped from 4.8 percent in 1982 to 4.3 percent in 1983 but is on the rise again, hitting 4.9 percent for the first five months of this year. Those figures include all absences, contractural and AWOL, and tardinesses.

At American Motors, the rate dropped from 3.7 percent in 1982 to 3.0 percent in 1983 but is also climbing, hitting 3.5 percent for the first six months of 1984.

AMC's absenteeism rate at its Kenosha plant was 3.1 percent in 1983 and 3.2 percent through this June. At the Toledo operations, it rose from 2.9 percent in 1983 to 3.7 percent this year. The company has added another 1,000 people to that plant since the end of last year.

Big Four Absenteeism Percentages

	1974	1975	1976	1977	1978	1979	1980	1981	1982	1983	1984**
Chrysler	7.7	6.8	7.4	8.0	7.8	7.4	6.0	5.6	4.8	4.3	4.9
Ford	5.5	5.1	5.0	6.0	5.9	5.8	4.8	4.3	3.7	3.5	3.7
GM*	6.4	6.0	6.4	7.9	9.8	5.7	4.2	3.9	3.2	3.3	3.8
AMC	—	—	—	—	—	—	—	5.0	3.7	3.0	3.5

*—General Motors absenteeism rates for 1977 and 1978 reflect contractural absences.
**—1984 figures are through March for GM, through May for Chrysler and through June for Ford and AMC.
Comparisons among the companies are not valid since each uses a different method of computing absenteeism. Volkswagen of America would not release its absenteeism figures.

Workers oppose training plan at GM Wentzville

WENTZVILLE, Mo. — By a 4 to 1 margin, UAW members at the General Motors Assembly Division plant here voted to try to end the fairly new "pay-for-knowledge" plan and go back to job classifications tied to seniority.

More than 3,000 workers, members of Local 2250, were eligible to vote. Casting ballots against the proposal were 1,936 hourly workers while 499 favored retention of the voluntary program.

However, factory officials have indicated that this concept won't be dropped, but is subject to local negotiations.

Fred Singleton, president of the local, said that more than 70 percent of the GM workers started the program, which permits workers to participate voluntarily so they'll be trained to do 16 jobs rather than one or two on the assembly line.

The benefit to the worker is that after going through group training, he can boost his hourly pay from $9.63 to $10.06. This helps the company through a pool of flexible workers.

However, some UAW members maintained that the program placed older workers with higher seniority at a disadvantage if they didn't participate. A non-participant isn't eligible for job transfer or promotions to other classifications.

25 with Chevy

C. L. (Chap) Harrison, left, Taylor & Harrison, Inc., Providence Forge, Va., receives Chevrolet's 25-year-dealer award from O. K. LeBron Jr., Chevrolet's sales manager-East.

Study examines the next 20 years

Auto future promising, MIT finds

Continued from Page 2

and ease their fears of displacement by the new technology. Increased worker participation would help reduce costs and heighten attention to quality."

In the seven countries that were studied, direct automotive employment in 1979 totaled more than 3.6 million. By 1981, the number had declined by 400,000, "and this may have been only the beginning since the effect of the new automated, flexible manufacturing systems in the auto industry was only begining to be felt."

The report projected that the number of auto workers in those seven largest producing countries will fall off to 2.27 million by the year 2000.

When management adopts a strategy of "outsourcing" production and procurement abroad to counter what it perceives as excessive demands by labor, the report said, it runs the risk of not getting labor's critical support "whenever government must be lobbied for regulatory relief, trade intervention or financial assistance."

The advantage of an "outsourcing" strategy is that it consistantly "dramatizes the possibility that in-house jobs will be lost unless changes occur that are of sufficient magnitude to overcome the competitive advantages of outside vendors."

"The issue . . . is one of delicate balance," the report said. "The balancing task would be difficult in any circumstances, but it is particularly so when the prospects are for an overall decline in employment and when competitive pressures necessitate rapid adjustment. This means walking the tightrope in a hurricane.

• The report sees the probability of no radical change in most passenger cars produced in the next 20 years. The conventional internal - combustion - powered four-to-five passenger vehicle "will not be threatened (in that period) by energy prices or by such alternative powertrain technologies as turbine or electric."

Many factors enter into a maker's decision to incorporate major technological advances.

"On balance," the report said, "the probably moderate pace of fuel-price increases and the long development time needed to perfect and introduce technologies beyond the present state of the art mean that only a few of the more advanced concepts will find their way into production cars during the next 20 years.

"However, the potential for rapid introduction is there if conditions demand crash adaptation."

The probable individual areas of future innovation "do not have the spectacular quality often associated in popular discussion with innovation and 'high technology,'" the report said.

It added, "The next 20 years it should be clear, will not be filled with electric or hydrogen-fueled or self-driving autos, nor will cars pour forth from fully-automated factories.

"Moreover, the primary system of innovation will continue to be the incremental one-system - at - a - time, one - market-segment-at-a-time approach."

Nevertheless, said the report, the effects of a number of incremental innovations are cumulative: "Their impact over the next 20 years on the automobile and its use is likely to be very large, particularly in terms of the competitive balance within the world auto industry."

Whatever the source of innovative ideas, inside or outside the auto industry, "the most important determinant of the rate of innovation actually reaching users in the next 20 years will be the type and intensity of competition in the world auto industry."

The MIT analysts said that the "great question" is whether all the competing interests and perceptions of reality within each country and across the developed world, can be balanced.

"We have no final answers, but there are many positive signs," they wrote.

"The pace of copying, collaboration and direct investment has stepped up dramatically in the U. S. and Europe since the late 1970s. The major producers and component suppliers, both in Japan and the West, seem to be internationalizing rapidly."

Cited were the new U. S. assembly plants of Honda and Nissan, the General Motors-Toyota collaborative manufacturing venture in California, GM's new "Buick City" and the innovative Pontiac Fiero production system and BL's process of collaborating with Honda and others.

The major uncertainties, the study report noted, are that the "full process of rebalancing and assimilation will take many years. Individual producers inevitably will make catastrophic errors from time to time, which governments will be hard pressed to ignore or to remedy creatively. Labor leaders and company heads will face a difficult task in explaining the demands of the future to the rank and file.

"Finally, the trade cycle and the general sluggishness of the world economy will put periodic pressures on the weakest producers and national industries, which governments will feel compelled to alleviate."

Changeovers and vacations trim inventories

Domestic car supply cut to 47 days

Continued from Page 1

ures significantly via sales increases as well as plant shutdowns. The AMC-built Renault Alliance nearly halved its days' supply, for example, despite an inventory decline of only 2,500 units. Encore pulled off nearly as good a sales feat.

The Aug. 1 inventory was divided this way: General Motors, 51.43 percent; Ford Motor Co., 26.19 percent; Chrysler Corp., 16.70 percent; AMC, 3.59 percent; VW, 1.53 percent, and Honda, 0.56 percent.

One month earlier, the breakdown was GM, 48.85 percent; Ford, 29.30 percent; Chrysler, 16.70 percent; AMC, 3.44 percent; VW, 1.23 percent, and Honda, 0.48 percent.

Standard-size and luxury models had heavier shares of the Aug. 1 inventory compared with a month earlier. The Aug. 1 breakdown was subcompact, 20.48 percent; compact, 27.71 percent; intermediate, 28.31 percent; standard, 14.15 percent, and luxury, 9.35 percent.

The comparable July 1 shares: Subcompact, 20.45 percent; compact, 28.18 percent; intermediate, 28.99 percent; standard, 13.57 percent, and luxury, 8.81 percent.

• There was a 51-day supply of subcompacts on Aug. 1, broken down this way: Daytona, 84 days; Laser, 76; Lynx, 72; Charger, 66; Omni, 60; Turismo, 59; Escort, 58; Horizon, 58; Rabbit, 56; Encore, 50; EXP, 49; Pontiac 1000, 47; Chevette, 43; Alliance, 43; Accord, 19, and Fiero, 16.

The compact-cars and their days' supplies: Eagle, 102; Topaz, 73; Aries, 71; Cimarron, 66, Capri, 66; Dodge 600 two-door and convertible, 66; Camaro, 65; Reliant, 62; Tempo, 61; LeBaron, 56; Firenza, 54; Skyhawk, 52; 2000 Sunbird, 50; Mustang, 48; Firebird, 44, and Cavalier, 34.

Intermediates and their days' supplies: Malibu, 283 (there were only 92 Malibus left in stock, but they were selling *very* slowly); Chrysler E Class, 90; Dodge 600 four-door, 85; New Yorker E, 81; Phoenix, 73; Thunderbird, 65; Grand Prix, 58; Bonneville, 56; Regal, 56; Skylark, 53; Citation, 51; Cougar, 49; Monte Carlo, 45; Century, 43; LTD, 40; Pontiac 6000, 40; Omega, 39; Marquis, 35; Celebrity, 31; Ciera, 26, and Cutlass, 26.

Days' supplies of standard-size cars: Parisienne, 66; Diplomat, 51; LeSabre, 51; Chevrolet, 50; Gran Fury, 47; Grand Marquis, 46; Crown Victoria, 44, and Oldsmobile 88, 35.

For luxury cars: Eldorado, 76; Corvette, 74; Mark VII, 73; Toronado, 64; Fifth Avenue, 63; Riviera, 62; Seville, 53; Lincoln, 44; Oldsmobile 98, 29; Continental, 27; Electra, 21, and Cadillac, 19.

Fisher Body, GMAD are casualties of reorganization

2 major divisions leave GM scene

Continued from Page 3

two firms was in 1910 when Fisher sold Cadillac 150 closed bodies (Fisher pioneered the closed body). By 1912, Fisher's sales to GM had grown to 105,000, and it was still making bodies for other firms.

That changed in 1919 when GM bought 60 percent of Fisher Body Corp. for $27.6 million. The agreement stipulated that, except for some open body styles supplied to Chrysler Corp., Fisher Body would produce bodies exclusively for GM.

On June 30, 1926, Fisher Body became a division of GM when GM purchased the Fisher brothers' remaining interest. The price was $208 million.

Fisher Body employes had a fierce loyalty to their company and to the family that ran it. The old-timers never really acknowledged that they worked for GM, despite what it said on their paychecks. They worked for Fisher Body or for "the Fisher boys."

Although Fisher Body Division is gone, the Fisher name survives at GM in Fisher Guide Division, which was formed last month by combining eight Fisher Body hardware plants with Guide Division.

GMAD does not have the long history of Fisher Body, but it (and its predecessor) have been on the scene since before World War II.

Before the war, plants in South Gate, Calif., and Linden, N. J., were building Buicks, Oldsmobiles and Pontiacs from parts made by those divisions. This activity was expanded with the formation of B-O-P Assembly Division in 1945.

In 1963, GM began making Buicks, Oldsmobiles and Pontiacs in certain Chevrolet plants and Chevrolets in plants of the B-O-P Assembly Division. B-O-P Assembly became GMAD in 1965.

The division grew. In 1968, it took over six Chevrolet and Fisher Body plants (doubling GMAD's size) and eventually it operated every assembly plant except the home plants of the divisions.

Caldwell elected to board

NEW YORK. — Philip Caldwell, chairman and chief executive of Ford Motor Co., has been elected to the board of directors of Russell Reynolds Associates, Inc., an executive recruiting firm.

Suzuki models trickling in from Puerto Rico, Guam

Non-west deals have Chevy Sprints

Continued from Page 1

untarily by the Japanese Government.

In addition, cars coming in from U. S. territories meet the safety and emission standards enforced on the mainland. Vehicles in U. S. protectorates are also subject to the same recall notification procedures.

There are some indications that unauthorized importation has subsided as Puerto Rico's domestic market improves and manufacturers crack down on traffic out of Guam.

But introduction of the Sprint last May has apparently awakened interest in states where the minicar is not sold and, therefore, created a market for Suzuki vehicles from other sources.

General Motors has only 17,000 Sprints to sell during the current quota year and is distributing them only in Alaska, Arizona, California, Hawaii, Washington, Idaho, Nevada, Oregon and Utah.

But to the dismay of Chevrolet, the same vehicle has been spotted in some Eastern dealerships bearing the Puerto Rican designation SA 310.

"Those are unauthorized sales and we don't warrant those vehicles," said a Chevy spokesman. "But it could reflect poorly on us because people associate the car with Chevrolet."

He said the division became aware of the problem shortly after the Sprint was introduced, but it has no way of tracking how many Suzuki minicars are being sold and by whom. However, he said it is "not just Chevy dealers" who are retailing the unauthorized cars.

"We're in contact with Suzuki," said the Chevy representative. "We've discussed the situation with them and those discussions are continuing, but we're not even sure that Suzuki has control over it."

Bernard Neary, executive vice president of the South Florida Automobile Dealers Assn., said he was aware of only one local importer of the Suzuki minicar — South Florida Auto Center of Miami.

However, South Florida Auto Center's general manager, Gene Hernandez, denied that the firm has ever brought the three-cylinder vehicle into the U. S. He said his company imports Suzuki's Jeep-style SJ 410 vehicles from Puerto Rico, but does not handle the SA 310.

"No, sir, I don't have that car," said Hernandez. "Chevrolet has the Sprint. I imagine some private individuals are bringing one or two in, but I really don't know of anybody who is."

Christopher Bates, an economist monitoring Japanese imports at the U. S. Department of Commerce, said 7,295 Japanese-manufactured cars were brought into the U. S. through Puerto Rico during the third year of voluntary restraints which ended March 31.

Bates said Japanese import numbers are not available from other third countries because the figures are not aggregated by the U. S. Census Bureau and therefore are considered "business confidential."

• But he said the combined Japanese imports from Guam, the Virgin Islands, Panama and other third countries "are roughly the same order of magnitude" as the Puerto Rican total.

Passage of Japanese cars from Puerto Rico to the U. S. climbed to 7,295 for the year ended March 31, 1984. It was 5,877 during 1982-83 and 3,240 in 1981-82. Prior to the voluntary restraints, Bates said approximately 100-to-200 Japanese cars came into the country from Puerto Rico each year.

"It is purely conjecture on my part," Bates said, "but there is such a strong demand for Japanese vehicles in this country that dealers may be willing to pay a price beyond what they did a year ago.

"What happens, essentially, is that a dealer in the U. S. wants to get hold of six vehicles or so and makes an offer to someone in Puerto Rico," he said.

"Assuming what they bring in meets U. S. environmental and safety standards, there is nothing the U. S. Government can do, and nothing the manufacturers can do without running the risk of violating anti-trust laws."

Cadillac gets convertible look

E&G Classics, Inc., Columbia, Md., is offering an aftermarket kit to give the '85 Cadillac Coupe DeVille the convertible look.

Honda vaults to top spot in 1st-half sales per dealer

Continued from Page 1

passed 86 in 1983; Audi, at 96, replaced its 83 high from 1974; BMW's 89 surpassed 66 last year; Saab's 55 was up from a record 43 in 1983; Jaguar moved to 47 from the year-ago record of 39, and Peugeot's 30 erased the former record of 25 set in 1981.

Average sales of domestic units per new-car dealer climbed to 204 the first half of this year from 162 in 1983. The imported-car average for the same period dipped to 117 from 119.

The average for General Motors dealers made an impressive gain from 1983, up to a first-half mark of 251 from 196. Ford Motor Co. dealers boosted their average to 183 from 140, and the Chrysler Corp. average expanded to 131 from 118 a year earlier.

The American Motors corporate average, including AMC, Renault domestic and Renault imported cars slipped to 68 from 75. Volkswagen, which also includes U. S.-built and imported passenger cars, had a 115 midyear average, up from 87 in 1983. VW's import line enjoyed a 58-percent sales increase this year.

Honda, which topped VW in the domestic market by a 50-percent margin in the first half of 1984, still sells the majority of its cars from imported stocks and is considered an import in the dealer survey and sales-per-dealer calculations. Its 316 average was the highest for any make for the first half.

• Among the domestics, Cadillac was the top average first-half nameplate with a 63-per-outlet figure. Second was Oldsmobile's Cutlass/Cutlass Supreme at 61, followed by the VW Rabbit, 49; Oldsmobile Eighty-Eight, 46; Oldsmobile Cutlass/Ciera, 45; Ford Escort, 38; Chevrolet Cavalier, 38; Buick Century, 38; Renault Alliance, 37, and Buick Regal, 36.

Domestic nameplate leaders by market segment for the first half of 1984 were: Rabbit, 49, was best subcompact; Chevrolet Cavalier, 38, topped the compacts; Cutlass/Supreme, 61, led intermediates; Oldsmobile Eighty-Eight, 46, was first among standards, and Cadillac, 63, was the top luxury nameplate.

Industry nears 5 million for year

Week's car output rises to 120,213

By Keith Gave
Detroit Reporter

U. S. auto production is nearing the 5-million mark, but current output shows the effects of model changeover.

Some Chrysler lines renewed limited production last week, but Volkswagen of America, despite plans to resume production a week ago, won't resume building cars in the U. S. until at least August 20.

General Motors resumed production at three plants, but shut down three others for model changeover.

Domestic manufacturers projected completion of 120,213 cars last week, 9.36 percent more than 109,923 completed the previous week and 17.33 percent above 102,455 in the same week a year ago.

Year to date, 4,972,089 cars have been built in the U. S., a 25.84 percent increase over the 3,951,158 finished at this time last year.

Of last week's estimated car production in the U. S., General Motors accounted for 56.86 percent, followed by Ford Motor Co., 29.33 percent; Chrysler, 6.82 percent; American Motors, 3.99 percent, and Honda, 3.00 percent.

Workers began returning to Volkswagen's Westmoreland (Pa.) facility Aug. 6, as members of the plant engineering department completed a multi-million-dollar project to retool the facility for production of the new Golf.

VW began calling workers back in what company officials called a "phased-in return" in preparation for production, which is scheduled to begin Aug. 20.

Chrysler has scheduled its six U. S. car and truck assembly plants to operate this week with two regular shifts at each plant.

General Motors resumed production at Leeds (Mo.), Willow Run (Mich.) and Wilmington (Del.). It shut down plants in Detroit, Fairfax (Kans.) and Oklahoma City, bringing to 21,400 the number of hourly workers on temporary layoffs.

GM said it scheduled Saturday overtime at its Flint G-line and at Lordstown, O.

Ford resumed second-shift production at its Hapeville (Ga.) plant, where it builds Thunderbird, LTD, Marquis and Cougar.

Wide-ranging House bill would regulate safety, more

Continued from Page 3

which proposes criminal penalties for corporate officials who "willingly and knowingly" fail to tell the public and the government of a safety defect.

He cited a number of product liability cases where the auto makers faced huge punitive and compensatory damages. His point: When the auto makers pay these, the cost is passed along to consumers in higher prices and/or to stockholders in smaller dividends, whereas in handing out jail terms, only the responsible corporate official is hit.

Strong manufacturer opposition over the feasibility of a crashworthiness index seems to foretell death to the bill.

NHTSA has been diligently continuing to crash cars at 35 MPH (one-third more force than the 30-MPH compliance speed) and releasing data much too late to be of any value in buying current models.

In general, NHTSA stands by the repeatability of its data and downplays variability, but the auto makers are vigorous opponents of ratings and any suggestion that crash results relate to real-world experience.

A 1972 law requires NHTSA to compile consumer data on occupant protection, damage susceptibility, ease of diagnosis and repair and insurance costs. This mandate has still to be accomplished.

The gray-market provision in the Wirth bill would stem the growing tide of nonconforming cars — as would two earlier Senate bills which never received final Congressional action.

Even NHTSA, which has been notably silent while its sister agency EPA has been carrying the ball, called the growing number of gray-market cars a serious problem and is looking at several possible solutions.

EPA will probably settle the matter by effectively outlawing such wholesale importations by November.

In summary, putting together various bills by several congressmen, adding Administration-backed proposals and adding several highly controversial and consumer-oriented measures produced a lively hearing but not legislation which is going anywhere this year.

Car output slips in Canada, but trucks move up

Canadian auto and truck production continued to fluctuate last week as vacations and model changeovers affected output.

Reduced activity at General Motors and Ford Motor Co., along with an idle Volvo, resulted in a decline for autos last week. At the same time, Canadian truck makers saw output improve slightly as Chrysler Corp. stepped up assembly.

The Canadian industry targeted completion of 13,023 cars last week, down 15.38 percent from the prior week's 15,390, but 45.61 percent greater than the year-ago week's 8,944.

Vacationing workers at Volvo's Halifax (N. S.) plant are scheduled to return Aug. 20.

Year to date, 676,414 cars have been assembled in Canada, 11.21 percent above 608,229 assembled during the same 1983 period.

Canadian truck makers slated assembly of 8,795 units last week, 4.48 percent better than previous week's 8,418 and 18.79 percent above 7,404 built during the year-ago week.

So far this year, 488,765 trucks have been completed, 55.27 percent more than 314,783 finished at this time last year.

Truck production rises for week; 54,419 assembled

Domestic truck production improved slightly last week but a lack of activity at Nissan helped keep totals below normal.

U. S. manufacturers projected assembly of 54,419 trucks last week, 2.22 percent greater than the previous week's 53,238 and 45.28 percent better than the year-ago week's 37,458.

So far this year, 1,920,473 trucks have been completed in the U. S., a 39.34 percent improvement over the 1,378,254 assembled during the same 1983 period.

Nissan's Smyrna (Tenn.) facility remained idle last week for scheduled vacations. Production at the plant is expected to resume today (Aug. 13).

General Motors was the only truck maker to schedule overtime last week. GM's Pontiac facility worked one Saturday (Aug. 11) overtime shift.

60th year—$40 per year, $1.00 per copy

Shop volume continues to post increase

By Francis J. Gawronski
Service Editor

Although the rate of growth of service and parts business in new-car dealerships cooled off in June, shop volume continued to show an increase over the business recorded in the year-earlier month.

According to the Automotive News Service Index, service and parts business in June

Table on Page 43.

amounted to 109.2 percent of the volume done in June, 1983.

June's increase was the smallest of the year. In May, the jump in shop volume was 16.9 percent; in April, it was 15.1 percent.

June also marked the 16th consecutive month in which service and parts business topped the volume of the same month a year earlier.

As in the previous 14 months, all indicators used in the Service Index were up in June, led by gross profit on all labor, parts and accessory sales—the most important indicator from the dealer's viewpoint. Gross profit was up 18.2 percent over the year-earlier figure.

Shop parts sales, those used in customer-paid and warranty work, were up 14.0 percent, while total labor sales (customer-paid and warranty) bettered the year-ago figure by 9.6 percent.

Sales of all parts and accessories increased 7.8 percent, while work orders written im-

From Pontiac for '88

Jim Dunne

Stepping in for Bonneville, Grand Prix

Pontiac will offer a slightly different version of this prototype test car in the fall of 1987 as a replacement for the Bonneville and Grand Prix. Codenamed the W-car, the new model will feature front-wheel drive and a 2.2-liter four-cylinder gasoline powerplant. Hidden headlights on the prototype may give way to aerodynamic headlights on the production cars. Buick and Oldsmobile will share the basic body style with Pontiac.

Stock of imports falls to 24 days; strike exacts toll

By Kathleen Hamilton
Assistant Managing Editor

This month's inventory numbers reveal one group of people who don't have to worry about rising interest rates: Import dealers. They don't have any cars left to floorplan.

There were 197,688 new imported cars in dealer, distributor and port inventories Aug. 1, the lowest total since Sept. 1, 1983.

In large part because of the German strike, the inventory of German cars fell some 40 percent during the month. Riddled by shortages, Porsche and Mercedes-Benz, especially, experienced sales declines.

On Aug. 1, there was a 24-day supply of imported cars in

Table on Page 43.

stock, compared with a 25-day supply one month earlier and a 26½-day supply a year earlier.

On July 1, there were 216,815 imported cars in stock. On Aug. 1, 1983, there were 227,819.

Like the domestics, imports had slower daily selling rates in July, making the import days' supply figure look better. But it's still a far cry from the 60-day supply considered ideal for imports.

Just how hard the strike hit the Germans is illustrated in the inventory shares. The latest survey found the German makes had 17.47 percent of the cars in U.S. inventory; the Japanese, 66.63 percent, and other European makes, 15.90 percent.

One month earlier, the Germans had 28.05 percent, the Japanese, 55.92 percent, and other Europeans, 16.03 percent. And it should be noted that even on July 1, German-car shortages were developing because of the strike that hit suppliers and manufacturers.

• The strike wasn't the sole cause of low inventories, however. European vacations traditionally slice import inventories at this time of year. Saab, for example, reported scattered acute shortages. Jaguar, too, lost sales due to shortages.

Japanese-car shipments increased slightly during the month. Honda increased its

Luxury, sporty autos help push overall auto total to $19.2 billion

Europe swells U.S. trade deficit

By Jake Kelderman
Washington Reporter

WASHINGTON. — The U. S. trade deficit in automotive products in 1983 reached $19.2 billion, much of which, as one would expect, was with Japan.

As well as Japanese auto makers have done here, however, so too have their European counterparts made a mark.

Owing to the popularity of the luxury and sport sedans, the Europeans now account for some $5.3 billion of the $19.2-billion automotive trade deficit. This is about half the $10.7-billion deficit the U. S. has with Japan. But it is a deficit built on the sale of just 419,079 European vehicles, compared with 1.86 million from Japan.

If the U. S. is a cash cow for the Japanese makers, so, too, is it a cash cow for the European makers.

Maryann Keller, automotive analyst for Vilas-Fisher & Associates, of New York, said high demand in the U. S. for European luxury and performance vehicles and the appreciating dollar now account for "over 75 percent of the earnings of Europe's luxury-car companies (Mercedes-Benz, BMW, Audi, Volvo, Saab and Jaguar)."

Keller said, "The U. S. is not only providing over 80 percent of the profits reported by the Japanese auto industry, it is doing the same for European auto makers who export to the U. S."

The degree to which the U. S. is a "cash cow" varies among the European makers. As the figures in the accompanying table show, Jaguar and Saab are

Tables on Page 43.

very dependent upon the U. S., while Audi, BMW, Mercedes and Volvo are dependent to a lesser extent. It cannot be denied, however, that U. S. profits are now driving all these companies.

• Much of this has to do with the dramatic rise of the dollar against all foreign currencies, effectively making the European cars affordable in the U. S. when they might not be otherwise.

In 1977, for example, the West German mark traded at two, or slightly less than two, to the U. S. dollar. In 1983, it averaged 2.55 to the dollar. Last week it traded at 2.8 to the dollar.

In France, where the Mitterand government was forced to revalue the franc, the rise has been even greater.

European car makers, who had long considered the U. S. a good second market, now increasingly turn to it as a major source of income and one of the few places where market gains are still to be made.

The four majors (Volvo, Mercedes-Benz, BMW and Audi), for example, sold 269,727 units here among them in 1983, but by 1986, they project that they will sell as many as 410,000 units in the luxury and sport-sedan classes.

Volvo expects to break through the 100,000 level in 1985 and BMW plans to be right behind it if Audi does not get there first. Mercedes, which sold nearly 74,000 cars here in 1983, figures to get to 100,000 in two years.

If U. S. interest rates stay high, as they are expected to do (they are the primary cause of the strength of the dollar), those sales levels will mean tremendous profits for these companies.

As formidable as the Japanese makers are in the small-car market, so are the Europeans in the luxury end of the market. Surveys already show they consistently sell to a younger group of buyers than U. S. luxury-car makers. These young buyers will control better than 50 percent of the total car market in the 1990s.

Meanwhile, those same profits are allowing European makers

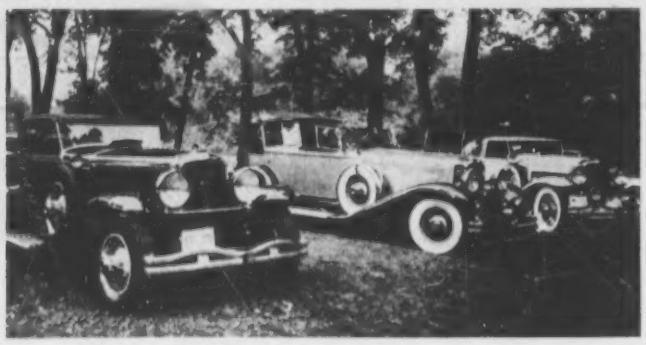
Front-drive Cadillac limo due in 1985

Cadillac's 1985 C-body-based limousine, a foray into new assembly methods and materials, will be built by Hess & Eisenhardt Co. It features fiberglass doors, hoods and roof inserts.

NEWSPAPER



Where Duesenbergs gather . . .

The 29th annual Auburn-Cord-Duesenberg Festival will be held in Auburn, Ind., Labor Day weekend, Friday through Monday—Aug. 31-Sept. 3. Highlights will include a collector-car auction and swap meet, parade of classics and meeting of the Auburn-Cord-Duesenberg Club. Theme of the festival is, "The Year of the Duesenberg."

To eliminate 'Tower of Babel' among robots, Smith says

GM aims for integrated automation

By Roger Rowand
Engineering Editor

TRAVERSE CITY, Mich. — A new acronym has been added to the fast-growing lexicon of such code terms at General Motors where broad-scale reorganization of the North American Organization (NAO) is under way.

One of the latest acronyms is MAP for Manufacturing Automation Protocol and Chairman Roger B. Smith says that without it, computer-aided design and manufacturing will never exist the way GM wants it.

"Before we can get to the factory of the future there are longstanding problems on the plant floor that need to be resolved," Smith told a University of Michigan automotive management seminar here.

"Currently, we are limited in the manufacturing efficiency we can achieve by the Tower of Babel that exists among robots and other computer-aided programmable devices," he said.

Smith said only about 15 percent of GM's 40,000 programmable devices can communicate outside their own processes. And, he said, 30 percent to 50 percent of the costs for new automation are directly related to communications.

Each vendor's equipment uses unique language, so simply increasing automation is not the answer to better manufacturing efficiency.

"What we need is integrated automation that works in harmony with other functions in the plant," Smith said.

MAP is a common language for the factory and will be based on national and international communications standards. When created, it will allow robots to talk with each other no matter what brand name they wear, Smith said.

MAP is a joint venture between GM and seven of its major computer, controls and communications suppliers, including IBM and Hewlett Packard.

After his formal presentation, Smith said GM's Saturn project will be followed by one that may be called Jupiter. "We can't stop with Saturn. We've got to go down the road with all sorts of projects," he said.

In response to a question, Smith said the Saturn assembly plant will be new from the ground up, a green-field project.

Smith, who showed some of the Saturn project to President Reagan July 5, declined to discuss details.

"Only the President of the U. S. knows, outside of GM, and he isn't going to tell you," he said.

Lloyd Reuss, group executive, Chevrolet-Pontiac-Canada, said, "You really can't look at Saturn as simply a vehicle. That's been one of the problems with the press. The press has looked at it as only a vehicle, but the car itself is just a part of a much bigger story.

"The big news, the real excitement, is the fact the brightest people of every kind within GM and within our suppliers throughout the world are rethinking every phase of what it takes to bring a new product to market.

"Saturn is a laboratory of change," Reuss said.

Chairman Smith downplayed reports of salaried employe layoffs.

"I don't see a reduction in the white-collar workforce," he said. "We added 5,000 salaried employes last year and we'll probably add another 5,000 in the coming year."

He said there will be dislocations of personnel, however.

"We're in a transition phase and have to run some operations in parallel because we can't afford to miss product deadlines," he said. "For a while, we are going to have more players than we have chairs."

Suppliers get into act much earlier at GM

TRAVERSE CITY, Mich.— Suppliers have clamored to be allowed in on new-car design earlier and they are indeed getting in earlier at General Motors, Lloyd Reuss, group vice president, said here.

On one 1988 program, major suppliers will be selected by this December, some two to 2½ years earlier than usual. For the first time, many parts for prototype vehicles will come from their eventual suppliers who will get larger, life-of-platform production contracts, Reuss said.

Would save auto maker millions but not cut benefits

GM offers health-care plan to UAW

In contract bargaining last week, General Motors presented to the UAW a health care proposal that would save GM $220 million a year but would not cut benefits nor require contributions from employes.

The health care proposal was the first made to the union by GM since negotiations began a month ago.

Under the proposal, a GM hourly worker would choose one of the three health care systems:

1. The "informed choice" option uses a preferred provider network, made up of physicians and hospitals that contract with GM for health care services. The rules for the provider are agreed upon in advance.

If the employe chooses the preferred provider option but goes to a physician or hospital outside the network, the employe would bear some of the cost.

2. A second option would be a modified version of the traditional health care plan. However, controls would be placed on providers, including utilization review and prior authorization for all hospital admissions, skilled nursing and home care services, selected surgical and podiatric procedures, substance abuse treatment and out-patient psychiatric care.

The modified traditional plan also would require providers to establish review processes for in-patient and out-patient services including X-rays, lab procedures and prescription drug services.

3. The third option would be a Health Maintenance Organization, already available to GM employes. About 67,000 employes — or 200,000 to 250,000 persons including employes' dependents — are covered by an HMO.

The HMO has proven to be effective in containing costs, GM said. For example, the average length of a hospital stay has been cut in half.

UAW Vice President Donald Ephlin, head of the union's GM department, supported the concepts contained in the company's proposal. He said it is something GM and the union can build on.

He said the UAW had two "principles" on health care when negotiations began: "We did not want to shift costs to our members through co-pays and deductibles. That's not in the proposal. And we did not want to reduce benefits. That's not in the proposal either.

"In fact, if properly implemented with some suggestions we might make, there are some possible improvements in benefits for our people."

Ephlin's main concern is building safeguards into the system so employes are well-informed of the choices they make.

"We're not going to penalize our members for the misdeeds of doctors and/or hospitals," he said. "So we have to build in a lot of safeguards before we accept it."

• At Ford Motor Co., negotiators for the company and the union said many of the items in GM's health care proposal are already being done at Ford.

In fact, UAW Vice President Steven Yokich, director of the Ford department, said there are rumblings in the medical community that lawsuits will be filed over some of the practices.

"One thing we're looking at is a central laboratory service which would give us a guaranteed price," said Yokich. "We have heard there is a good possibility we'd be sued if we tried something like that."

Ford has made a health care proposal to the union but, unlike GM's, it includes co-pays and deductibles.

Health care ranks high on the list for both auto makers and the UAW in this year's negotiations.

GM's health care costs total $2.2 billion a year — or $430 per vehicle — and the company would like to cut that bill by 10 percent, said Richard O'Brien, GM general director of employe benefits.

O'Brien said health care costs have risen 15 percent a year for the past decade and the company is especially concerned about further increases since the workforce is aging and the ratio of retirees to active employes is rising.

O'Brien added GM processed 40 million claims last year.

Meanwhile, negotiations are continuing at the subcommittee level.

GM Vice President Alfred S. Warren said the corporation will be making a proposal on the job security issue this week and an economic proposal, perhaps late in the week.

Two Mitsubishi units to be consolidated

TOKYO. — Mitsubishi Motors Corp. and its marketing branch, Mitsubishi Motor Sales Co., will be formed into a single unit, effective Oct. 1.

Company officials said the aim of the consolidation is to increase company efficiency and to increase its share of domestic production.

Sinclair flair

Robert J. Sinclair, president of Saab-Scania of America, has been riding to work on his newly acquired (17th) motorcycle. Based on a BSA, the bike is powered by an 850-cc Saab two-stroke taken from an old Saab 96. Sinclair bought it on the Isle of Man.

Safety group asks FTC to force Ford recall

WASHINGTON. — As Ford Motor Co. was announcing the recall of 447,000 vehicles for seat and seat-belt repairs, the Center for Auto Safety asked the FTC to force Ford to remedy alleged steering and transmission problems in certain Ford cars.

The center said last week that 1981-83 Ford Escort and Mercury Lynx models equipped with automatic transmissions can experience "failure to shift into higher gears, locking-up and rough shifting which ends in costly repairs."

Approximately 1.2 million vehicles are involved.

The group is also asking FTC to require Ford to extend its warranty covering certain rack-and-pinion steering systems to an additional 5.3 million 1978-83 Fairmont, Thunderbird, Zephyr, Mustang, Granada, LTD, Capri, Cougar, XR-7, Marquis and Continental models.

Ford currently offers an extended warranty on rack-and-pinion steering repairs to an estimated 900,000 vehicles in 17 Northern and Mountain states and in Canada. The center wants the Ford coverage applied nationwide.

GM Saturn moves ahead

Project Saturn, General Motors' so-called "no-year" small-car development, will move from technical exercise to fully operational engineering status by the end of this year.

At least one of the planned series of Saturn vehicles will be given a model year target date, and move from under the reins of GM Vice President Alex C. Mair's Technical Staffs Group and into the hands of the Chevrolet-Pontiac-GM of Canada Group, where it will receive platform status.

It is believed the first of the revolutionary subcompacts will be introduced as a 1989 model in a single body style.

A number of versions are on the drawing boards at GM Design Staff, however, including sedan, aero sedan, coupe, 2-plus-2 and shuttle van.

Cadillac likes these numbers

Cadillac's general sales manager, L. B. (Braz) Pryor, pens in a new July sales record of 27,973—the best July in Cadillac's 82-year history. The new record exceeded the former July record of 25,696 set in 1978 by 8.86 percent and was 13.36 percent ahead of the 24,676 deliveries in the year-ago month.

On selling-rate basis

Early-month sales hit '84 bottom

By Jenny L. King
Staff Writer

Early August new-car sales brought good news and bad news.

First, the bad news: Sales were down from the '83 level, though it was only the second period in 22 this calendar year they have fallen short. And the daily selling rate was lowest for any 1984 period.

The good news was that year-to-date sales passed the five million mark, a full two months ahead of the 1983 pace. There was good news for Honda, too, which earned its largest share of the domestic market for any 10-day period.

Domestic sales for August 1-10 were down 0.84 percent, to 177,182 from 178,686. With nine selling days both this year and last, the daily rate was off 0.84 percent, to a calendar-year low of 19,687 from the year-ago 19,854.

Sales since the first of the year totaled 5,107,637, up 24.86 percent from 4,090,579 in 1983. Last year, the domestics didn't reach the five million mark until the first 10 days in October.

Honda's 2.34-percent share of the market topped its previous record of 2.26 percent established in the final period of February. Honda sales were up 118.62 percent, to 4,145 from 1,896 a year ago.

Ford Motor Co. reported sales of 42,373 new cars in early August, an increase of 8.98 percent from 38,880 in 1983. Chrysler was down 7.59 percent, to 21,423 from 23,183. General Motors' 102,561 total was off 6.07 percent from 109,189.

American Motors' estimate was 5,330, up 36.67 percent from 3,900, while Volkswagen was down 17.58 percent, to 1,350 from 1,638.

The early August domestic market was divided as follows: GM at 57.88 percent; Ford at 23.92 percent; Chrysler at 12.09 percent; AMC at 3.01 percent; Honda at 2.34 percent, and VW at 0.76 percent.

A year ago, GM had 61.11 percent; Ford had 21.76 percent; Chrysler held 12.97 percent; AMC had 2.18 percent; Honda earned 1.06 percent, and VW had 0.92 percent.

Sales results for the individual domestic makes included ascents and descents. Plymouth was down 40.03 percent from the year-ago period, Dodge was off 17.06 percent and Chrysler was up 45.02 percent. Ford was up 6.38 percent, Mercury was up 9.34 percent and Lincoln was up 33.39 percent.

Buick was up 9.13 percent, Pontiac was up 13.96 percent, Chevrolet was down 18.93 percent, Cadillac was down 11.91 percent and Oldsmobile was off 5.84 percent.

Sales of American Motors' AMC products were down an estimated 45 percent from last year while Renault cars were up 51.52 percent. VW was down 17.58 percent and Honda, up 118.62 percent, doubled its sales.

Chevrolet Cavalier was the top nameplate for the period with sales of 9,476. Ford Escort was second, followed by Chevrolet Celebrity, Oldsmobile 88 and standard Chevrolet.

SAE gets a look at GM math setup

DETROIT. — The GM20 cars will be the topic of speaker Jack H. King, who has been manager of manufacturing engineering - assembly, Fisher Body Division, when the Detroit Section of SAE meets Sept. 25 at Roma's of Bloomfield.

King will discuss details of General Motors' first large-scale application of a product math system which utilizes digitized body surface data for construction of major tooling.

He also will cover other aspects of automated systems used in GM's body manufacturing.

How to sell the Butcher, the Baker and the Candlestickmaker—

KC/1500 162 cu. ft.

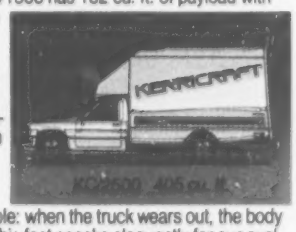
plus the Florist, the Caterer, the Utility Co., the Contractor, the Courier and just about everybody else in town.

Now you can fill a major void in the product line of almost every dealership, import or domestic: the growing demand by retail and service businesses for hard-working service fleets that combine the appearance, convenience and enclosed protection of a van – without the high price tag.

You can fill the demand by joining your Light Duty trucks with our Kerricraft truck bodies. What you get are good-looking well-built trucks, satisfied customers and a whole new profit center.

Our bodies are manufactured of reinforced fiberglass bonded over polyurethane foam and quality plywood. Kerricraft, rugged and heavily insulated, is remarkably lightweight, sleek and handsome.

The KC/2500 has a whopping 405 cu. ft. of cargo space with full-standup interior head room; the KC/1500 has 162 cu. ft. of payload with 3 doors, allowing total access from outside. Both bodies are easily adaptable to virtually any use.



Kerricraft bodies have a streamlined fairing that decreases wind resistance and increases fuel economy. Also, cooling and refrigeration capability including cab-only A/C, flat floors, and a variety of custom features.

Every Kerricraft unit is remountable: when the truck wears out, the body is still willing and able to carry on. This fact speaks eloquently for our quality craftsmanship and says even more about the savings ahead for the company that invests in Kerricraft bodies now.

We have only touched on the highlights of Kerricraft and how our truck bodies will become a profitable addition to your dealership's lines.

For more information or a personal presentation, please call (213) 806-3361 or toll-free in California (800) 841-5597.

truck industry news

2,441,736 units retailed in U. S. through July

7-month sales best since record '78

July retail sales of new trucks of all types in the U. S. topped the 300,000 mark for the sixth straight month, and the seven-month total was the second highest in industry history.

During the month, according to preliminary reports, franchised dealers and factory outlets retailed 347,387 vehicles, an increase of 33.5 percent over last year's 260,201 units.

The January-July total was up 39.2 percent to 2,441,736 units, compared with 1,753,762 in the same period a year ago. The alltime seven-month high of 2,472,365 sales was set in 1978.

Compact trucks, both domestic and imports, accounted for almost 42 percent of the January-July count. The total was 1,011,915 units, a gain of 66.5 percent over the year-earlier 607,752 units.

The domestic small trucks continued to increase their share of this market segment. Through July, they accounted for 67 percent of total sales, up almost 9 percentage points from a year ago.

The domestics' seven-month sales hit 677,721 units, a gain of 91.4 percent over last year's 380,108. The imports were up 31.7 percent, from 253,691 units in 1983 to 334,194.

• During the month, Ford increased its lead over Chevrolet by almost 3,500 units. Through July, its sales were 13,593 units higher than Chevrolet's.

Ford dealers sold 98,534 vehicles in July, an increase of 22 percent over last year's 80,781. The seven-month count was up 25.5 percent to 698,226, compared with 556,304 at the same time a year ago.

Chevrolet reported that its dealers retailed 95,093 units during the month, a gain of 19.5 percent over the year-earlier 79,546. Through July, the total was 24.1 percent higher than last year, 684,633 versus 551,820.

With two months remaining in the 1984 model year, GMC said its sales through July had exceeded the 12-month total for each of the last four model years.

Duncan A. Brodie, general director of truck sales, said dealers retailed 266,079 trucks in the 10-month period, topping last year's 250,676 for the full model year.

The calendar-year count for GMC was 197,719 units, up 27.2

Starting on the second-million S-trucks

The 1,000,001st compact S-truck built at three General Motors Truck & Bus Group plants is driven off the assembly line at the Pontiac plant. Preceding the GMC Jimmy sports/utility truck was the millionth S-truck, a Chevrolet Blazer. Since introducing compact trucks in 1981, when the market was dominated by imports, GM has gained sales leadership.

Early NHTSA action due on splash/spray

Congress in 1983 ruled that all new commercial tractors and trailers operated on the interstate system must have devices to reduce rain splash and spray by Jan. 6, 1985, but NHTSA has yet to act on the mandate.

What is the status of the rule?

Richard Burdette, NHTSA spokesman, said "we are behind schedule, but my understanding is that we intend to reach the congressional mandate. I know we are trying madly to meet the deadline."

He said a notice of proposed rulemaking is "not far away."

"There are two ways to approach an issue," he explained. "We can say we don't know anything about the issue and ask for information to find out."

In that case, NHTSA might issue an advanced notice of proposed rulemaking.

"Or," he added, "we can try to do the research up front and put out a definite notice of proposed rulemaking. That's been the approach for the splash-and-spray rule."

According to a NHTSA engineer, the agency ran in-house tests on splash-and-spray devices shortly after the rule was included in the Surface Transportation Assistance Act (which legislated longer and wider trailers).

• Tests of splash-and-spray reduction devices, conducted in the late 1970s, as well as movies of the spray guards in action, seemed to indicate the devices worked as their manufacturers claimed.

Shortly after the spray-device rule was passed by Congress, however, in-house tests by NHTSA, where the devices were evaluated by visual means, seemed to indicate otherwise.

Wind played a large factor in the results, and even in the best situations, a spray cloud was observed.

After conducting its initial tests, NHTSA contracted with Systems Technology, Inc., to conduct further tests, and earlier this year, the firm evaluated the spray devices by both electronic and visual means. The results however, have not been released.

The electronic tests, which used lasers and photocells to determine how much light passes through a spray cloud, can show a percentage improvement in splash-and-spray visibility.

Before it can rule on splash-and-spray devices, NHTSA said it must determine what a percentage improvement means in terms of increased visibility to motorists following or passing trucks.

The agency also must determine how well the devices have to work to warrant an investment by truck operators.

• The Motor Vehicle Manufacturers Assn. also conducted splash-and-spray tests, similar to the tests conducted by STI for NHTSA, and preliminary results were released recently.

Truck manufacturers, said Carl McConnell, MVMA splash-and spray project manager, don't have any strong objections to installing the devices, but they are concerned with the

Truck quality is better; still, dealers find fault

Quality has been the buzzword in the automotive industry since the start of the decade, and although it appears to be vastly improved, many truck dealers still find fault with the products they receive.

Like beauty, quality seems to be in the eyes of the beholder. What is a big problem to one dealer is not one at all, or a relative minor one, to another.

In a survey of truck quality, Automotive News asked dealers whether poor workmanship is a major problem today. Three-quarters of the respondents reported none, although many conceded there are minor faults.

Paint was the big complaint among the respondents. To some it was a major problem, while others termed it minor, but still a nuisance.

Since trucks are not shipped to dealers gift-wrapped, much of the paint damage and dents in sheet metal occur during the vehicles' journey from the assembly plant to the dealership.

While dealers are aware of this, they note that it takes time and money to correct the problems, and that prompt reimbursement often is hard to come by, if at all.

• A GMC dealer in the Southeast with paint headaches called them more a nuisance than a problem.

"The paint usually is too thin to match properly when touch-up or repair is needed," he explained. "But the big problem is to get paid for what has to be done. Factory service reps don't want to pay for more than 'spot' painting without a hassle."

Another GMC dealer in the same area, who said he had no major complaints, noted:

"Most of our problems come from shipping damages. Our transporter is not a neat trucking outfit. Their equipment is poorly maintained, their drivers have a typical union outlook and the product they ship looks

Optimistic Lennox says 'we can look beyond survival'

Harvester nears break-even point

Editor's Note: *The clouds that have been hanging over International Harvester since the start of the decade appear to be clearing. While the firm still is heavily in debt, IH management and industry observers think the worst is over. This final article in a three-part series takes a look at what lies ahead.*

By Jack Walsh
Truck Editor

International Harvester isn't yet "out of the woods," but its optimistic chairman, Donald D. Lennox, says that for the first time since 1979 "we can look beyond survival."

A dramatic surge in big-truck sales, coupled with Harvester's extensive cost-cutting moves, spinoff of numerous assets and restructuring of operation, has brought the company "pretty close" to the break-even point, according to Lennox.

"We're in a positive cash-flow position now," he said. "Our trucks and diesel engines are doing better than we expected, and parts and service volume is good, about what we had anticipated."

Lennox indicated, however, that making a profit on operations depends on a turnaround in the agricultural-equipment business, and he said that at this time "no one can adequately predict when that will be."

Donald D. Lennox
looking beyond survival

Neil A. Springer, Truck Group president, thinks retail sales of Class 8 trucks—the market segment in which Harvester is No. 1—will hit about 132,000 units in the U. S. this year, with his firm taking 22 to 24 percent of the total.

Sales in 1985 should be about the same as this year, he believes, with slight increases in 1986 and 1987. "By 1989, the total should be about 160,000, the best since the alltime high of about 173,000 in 1979," he says.

Lavon Fife, a Harvester economist, said the farm-equipment market "can't get much worse. We've seen three years of declining demand in every market category. This year has been as bad as 1983, and in some sectors it's been worse.

"A modest increase is possible in 1985," he added. "Farmers should be in a better cash-income position. But there are no strong signals of a significant upturn. Farmers are playing it conservatively; they've been badly scared for the last three years."

Meanwhile, Lennox said Harvester will continue to run a tight ship.

"Further cost-cutting moves will be taken," he added. "They'll be made basically in the ag group, but there also is room for improvements in other areas."

Some of the improvements

SHOWROOM PROFITS

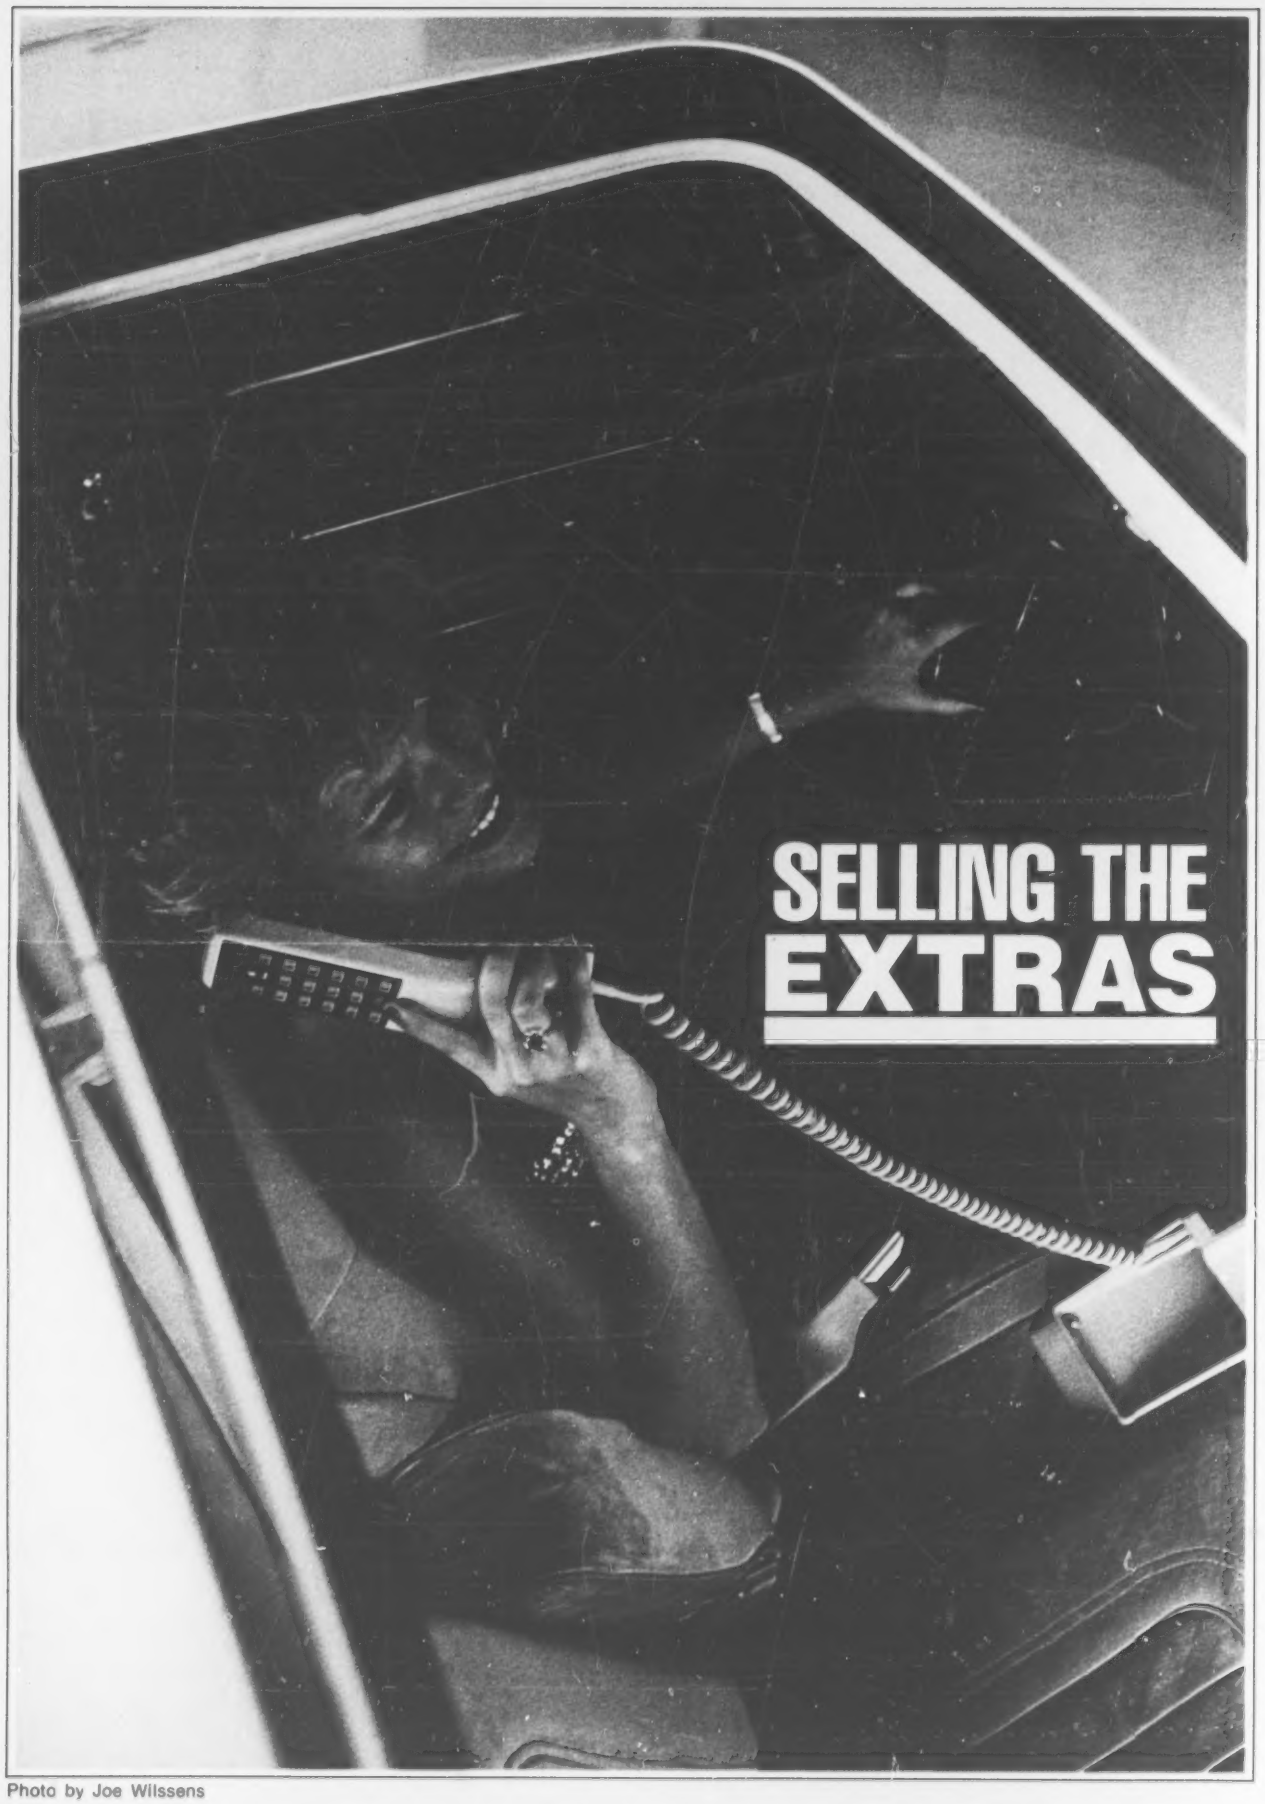

Photo by Joe Wilssens

With sales up dealer profits climb upward

Optimism for the future has never been greater

By Colleen Belli
Assistant Industry Editor

The profitability of the nation's new car and truck dealerships is on the upswing. More importantly, dealers are optimistic their healthy performance will sustain.

For the first five months of 1984 dealer net profit before taxes as a percent of total sales was 3.0 percent. This compares with 2.3 percent for the first five months of 1983 and the record high profit margin of 3.5 percent set in 1952, according to NADA.

The sharp recovery in sales began in 1983, permitting dealership profitability to return to more normal levels after three low years. The profit margin was 2.14 percent in 1983, at that time the highest profit margin recorded since 1972.

Dealers profit expectations for the future are up. At the beginning of 1984, dealers expressed greater optimism than at any time in the past seven years.

In January, 1984, the NADA quarterly Optimism Index reached a level of 180, an all-time high. The mid-year index recorded a level of 176 points. The record low of 17 was recorded in April, 1980.

NADA said the survey results have closely matched dealers' actual profit experience and also has served as a barometer of national economic trends.

Throughout 1981 and 1982 when many industry analysts were constantly predicting an imminent turnaround in new vehicle sales, dealers showed no significant increase in optimism. In retrospect it can be noted that the low level of dealer optimism was well-founded.

The NADA Optimism Index began its most recent rise in early 1983 and subsequently new car sales began to improve. The current high level of dealer optimism indicates that dealers believe the industry's recovery will continue throughout 1984.

• For the first six months of this year factory pre-tax profit margins climbed to 10.76 percent. The margin is up from 5.97 percent in 1983 and represents the first time since 1974 that the factory level reached 10 percent.

The increased factory profit margin marks a sharp climb from three loss years—1980, 1981 and 1982—when no profits were made.

While in the strictest sense it is not comparing apples to apples, it is inter-

Profits

Continued from Page E-1

esting to note the difference in factory and dealer pre-tax margins.

Dealers recorded a pretax profit of 2.14 percent in 1983 compared with 5.97 percent for the factory. While low profits were recorded by dealers in 1980, 1981 and 1982, it was unique in that they were ahead of the factory. Dealer pre-tax profits were 0.61 percent in 1980, 1.16 percent in 1981 and 1.30 percent in 1982 while the factory recorded a loss in each of those years.

Presently, however, the factory margin of 10.76 percent is much higher than the dealer margin of 3.0 percent.

• NADA also reported that the recovery in sales resulted in an increase in the new vehicle department's share of total dealership sales. It posted a more normal 63.4 percent share.

The used vehicle department's share of total sales declined only slightly while the service and parts department's share fell sharply from 15.8 percent in 1982 to 14.1 percent in 1983.

NADA said all dealership departments did, however, record not only dollar sales increases but also unit volume increases in the amount of work performed. The new vehicle department for the average dealership recorded a 19.7 percent increase in new unit sales. Used unit sales increased 9.6 percent and the total number of repair orders performed by the average dealer increased 8.0 percent.

A random sampling of dealers throughout the country by Automotive News revealed an optimistic picture for 1984.

Tim Jostes, sales manager of Tom Blaskovich Chevrolet, E. Chicago, said, "No question about it (dealer confidence). Consumer confidence is almost as high as I've ever seen it. That's where it's coming from. Our sales and profits are up 40 percent from last year.

Consumers prefer their cars loaded with options, he added. "If they want to make an investment in an automobile they might as well get what they want. It's a considerable purchase."

Jostes described his dealership as a consumer-oriented shop. In fact, according to Jostes, Tom Blaskovich Chevrolet rates as the number two dealership in the country on General Motors' customer satisfaction index.

"We are a customer-oriented dealer. We don't push service. We explain service. We put everything on the table. We don't want to sell a customer a car one time. We want to sell them again and again.

"We don't push anything. We explain things. We sell what they want. If the customer understands he'll buy. If he's confused, he'll hesitate," Jostes explained.

Business has picked up for trucks, too, he said. "Companies are replacing aging trucks that should have been replaced two years ago. The market is catching up."

The sales manager expressed optimism regarding the good news coming out of Washington, including low inflation and reduced unemployment. "Good news makes people feel good again. I wish Mr. Reagan could do something about interest rates. That would help also.

"I think the media can break the upswing. As long as people have confidence they'll buy. Bad publicity can slow this thing down. That's the only fear I have today," Jostes said.

Jack Roach of Roach Cadillac, Kansas City, Mo., was equally optimistic. "I'm very positive and very excited. Cadillac has certainly been a bell ringer. The acceptance of the new downsized C car has been very good."

Roach said his sales volume will be 1,500 plus for 1984, up over last year. The new C car has been a hit with younger buyers, in the 25 to 40-year age group. The 50-year plus age group still wants the traditional Cadillac.

To increase the profitability per unit, the dealer sells custom extras. Roach explained, "We customize cars as much as possible—with different wheels, premium tires, different grills, different tops and different trunks — something to give people exclusivity. It certainly helps to sell the car. If you buy a fine car you want something exclusive."

Roach added that his dealership sells service contracts on more than 50 percent of its cars.

Lewis Ewert of Reno AMC-Jeep, Reno, Nev., said his sales outlook is "excellent." For the first nine months of the model year through June, sales were 715 units, up from 466 at the same time last year.

"American Motors has initiated 10.9 percent financing and the access to financing has been very good. It definitely stimulated sales on our Renault line," he said.

Tom Driesbach of Driesbach Cadillac Co., Detroit, said, "The sales and profit outlook is better than the past three years. We expect to have 900 to 1,000 sales this year. Last year sales were 850."

To spark some new excitement, Driesbach has added an Avanti sports model in his showroom. He began selling the Avanti line two years ago, keeping three or four in stock yearround. He sells 10 to 12 per year.

"It is added income and it has increased showroom traffic. It's a great little car and not in direct competition with any of our cars," Driesbach explained.

Engines refined for 1985

Expanded use of EFI and turbos

By Roger Rowand
Engineering Editor

The 1985 car year won't go down in the record books as a great year for new automobile engines. It will have, however, a significant number of important innovations and reworks.

Power plants for the upcoming model year have been refined, honed for keenness of edge, smoothed and polished.

At Chrysler Corp., for example, they'll be talking a great deal — and enthusiastically — about the 2.2-liter with electronic fuel injection. That package will be available on an expanded number of cars this year and the company expects it to appeal to a wide variety of car buyers.

"An expert who knows engines says you will like this 2.2 liter EFI. But customers who just want to go when it suits their fancy will like the engine just as much as the enthusiasts, because it's always ready. And, it's the only one in town with a five-year, 50,000-mile warranty," said L. Donald Gschwind, vice president, program management.

"This and our turbo are fully electronically controlled for optimum performance and increased reliability. Should something go astray, on-board diagnostics guide the service people to the problem," Gschwind said.

The Dodge Omni GLH gets some optional muscle power this fall when the turbo becomes available.

The turbocharger becomes

Continued from Page 18

percent from the year-earlier 155,472. During the month, dealers sold 32,144 trucks, an increase of 37 percent over last year's 23,459 and the second-best July in GMC history. The July record of 35,865 sales was set in 1978.

• Chrysler-Plymouth and Dodge dealers sold 29,888 new trucks during the month, up 35 percent from last year's 22,137. Through July, the Chrysler total was 319,019, almost double the year-ago 159,546.

In July, 16,396 minivan sales represented 54.9 percent of Chrysler's total for the month. Through July, 103,367 of the small vans were retailed, accounting for 32.4 percent of the seven-month count.

In July, only 17 of the discontinued Volkswagen front-wheel-drive compact pickups were retailed, compared with 355 a year ago. Through July, the total was 368, down sharply from the year-earlier 3,633.

Toyota dealers sold a record 22,392 small trucks during the month, an increase of 63.4 percent over last year's 13,702. The seven-month total was up 55 percent to 144,206 units, compared with 93,060 in 1983.

• In July, Nissan dealers retailed 12,316 units, a decline of 23.8 percent from the year-ago 16,158. Through July, the total was 124,562, a gain of 62.1 percent over the 76,858 retailed in 1983.

Nissan's January-July total included 64,681 compact pickups assembled in the firm's Tennessee plant, and 6,128 of these vehicles were included in the July count.

July sales of Mazda compact trucks were up 68.6 percent, from 6,691 units a year ago to 11,282. The total through July was 71,320, a gain of 78.6 percent over the previous year's 39,936.

During the month, Isuzu dealers retailed 3,380 vehicles, an increase of 67.7 percent over last year's 2,016 units. The seven-month total was 22,880, up 74.1 percent from the year-earlier 13,141.

Mitsubishi dealers sold 1,329 trucks in July, a gain of 94.6 percent over the year-ago 683. Through July, the total was 8,760, up 88.4 percent from last year's 4,649 units.

Marketing & Media

Continued from Page 27

that sales, on average, went up 29 percent compared with the two months before the programs.

Two months after, sales dropped 25 percent.

Maritz also said that during a program, sales volume is 75 percent higher for enrolled dealers. On a national basis, when an auto company offers and promotes incentives, about 85 percent of dealers normally enroll.

Rick Comfort, sales promotional manager for American Motors' Philadelphia zone, said, "Money motivates people to a point. After that, they need the lapel pin, the plaque or the trip."

An incentive program must be tied to attainable and measurable objectives, Comfort believes. The goal is to increase sales volume — not necessarily per-car profit. To do that, a dealer must offer consumers lower prices or better financing, he said.

Comfort said it takes two to three weeks for people to adjust their attitudes and affect sales. Their participation must be reinforced every two weeks with short-term bonuses. Ninety-days is the maximum a program can be run; after that, dealers lose interest, Comfort said.

AMC credits its "Reach for Success" trip incentive, combined with 10.9 percent financing, for a big sales increase in the Philadelphia area and nationally as well.

Personnel

Dennis H. Plansker was elected group senior vice president of Campbell-Ewald. He also became director of broadcast promotion. He supervises production of all broadcast materials for Chevrolet.

Mark Rowlands became senior media planner on Dodge car and truck California marketing account, Direct Connection and new business at BBDO/Detroit.

Judy Hoomaian succeeded him as Dodge truck planner.

Ziebart Corp. named **Gary S. Tessmer** regional advertising manager. He will work with Ziebart auto appearance and protection center dealers in 22 states on local ad planning and needs.

Michael Mizak joined Grey Advertising as art director on the American Motors/Renault account.

Campbell-Ewald also appointed four new senior vice presidents. They are: **James T. Birchfield, John B. Hammond Jr., Robert S. Schenkel** and **David S. Stone.**

Birchfield is responsible for the agency's field offices and Chevrolet dealer asociation programs. He now also manages Chevrolet's car catalog program.

Hammond is account supervisor for Chevrolet small cars. Schenkel is senior executive producer for all production on Eastern Airlines and National Car Rental accounts. Stone is now director/agency information services. He was director/computer center.

BBDO promoted four people on its Dodge truck account: **Timothy S. Miller** became senior account executive, forward planning and special projects. He was succeeded as account executive by **Anthony Kuhn. William Freed** is a new account executive, and **Lorrie Mathis** was named assistant account executive on Dodge truck.

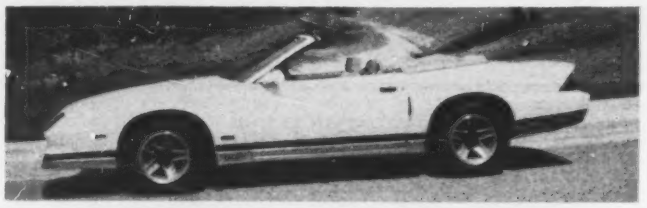
Consumers Digest honors Chrysler, Toyota

WASHINGTON. — Chrysler Corp. and Toyota were among eight companies presented with the first annual Consumers Digest Hall of Fame Awards.

Chrysler was honored for "originating and continuing to offer a five-year, 50,000-mile drivetrain warranty on all its passenger cars." Toyota captured the award "for the consistent high quality of its entire model line, its high owner satisfaction and commitment to safer design."



Converting the Camaro

American Custom Coachworks, Ltd., Beverly Hills, Calif., plans to build 250 four-passenger Camaro convertibles with automatic tops. The dealer wholesale cost for the conversion is $5,450, the company said.

Anglo American names Thee and Dickinson

NASHVILLE.—Anglo American Auto Auctions, Inc., has named Dennis M. Thee vice president and director of sales. Thee comes from Ford Motor Co., where he was advertising/merchandising manager of Lincoln-Mercury fleet sales.

The firm also named Gary Dickinson group security chief for its nationwide chain of auto auctions. Dickinson formerly was an auto theft investigator for the state of Texas.

Stockpile now at 24 days

Strike helps slice import inventory

Continued from Page 1

shipment of imported car rather significantly but it sold nearly all the extra cars within the month, leaving it with an import supply good for five days, compared with three days on July 1. It also had a 19-day supply of Ohio-built Accords on Aug. 1.

International Automobile Importers, Inc., refused to supply inventory figures for Bertone and Pininfarina, so AUTOMOTIVE NEWS estimated them from shipments and sales. Combined, IAI's days supply is an estimated 285 days, compared with the 122-day supply of the same two models that Fiat was carrying one year ago.

One year ago, Fiat was selling the cars at a daily rate about 50 percent higher than IAI's new network is doing, and it had about half the current inventory.

Renault's days' supply improved during the month because it halted shipments to the U. S. Its sales rate declined slightly during July.

Inventories of imported trucks (including Nissan's Tennessee-built trucks) were 86,785 on Aug. 1, up from 79,783 a month before but down from 22,209 a year earlier.

There was a 39-day supply of imported trucks on Aug. 1, up from 34 days on July 1 and down from 52 days on Aug. 1, 1983. Shipments of trucks increased during the month, and the sales rate slowed, resulting in the heavier stockpile.

But the truck sales rate was higher than a year ago—the reason for the large difference in the days-supply figures despite the small difference in inventories.

The combined import car-truck total on Aug. 1 was 284,473 units, down from 296,598 a month earlier and 316,028 a year earlier. But because of the changes in sales rates, the Aug. 1 supply of 27 days was the same as on July 1. On Aug. 1, 1983, there was a 31-day supply of imported vehicles in stock.

There were 131,723 new Japanese cars in inventory Aug. 1—a 20-day supply. Both numbers were higher than the July 1 equivalents: 121,233 units and 18 days.

In order: Honda (imports only), 5 days; Toyota, 15; Mazda, 17; Subaru, 18; Chevrolet Sprint, 20; Nissan, 27; Mitsubishi, 47; Isuzu, 58, and Chrysler's Mitsubishi-built captive imports, 64. The model-by-model breakdown of the Chrysler captives was: Dodge Vista, 39; Plymouth Vista, 43; Dodge Colt, 57; Plymouth Colt, 65; Plymouth Conquest, 99, and Dodge Conquest, 106.

• There were 34,534 German cars in stock Aug. 1, worth 43 days. One month earlier the stockpile stood at 60,820, or 53 days. The German cars and days' supplies: Mercedes-Benz, 17; Porsche, 19; Audi, 37; BMW, 46, and Volkswagen, 54.

There were 31,431 other European imported cars in stock Aug. 1—a 44-day supply. One month earlier, when the IAI cars were not yet included, inventory for the category was 34,762, a 51-day supply.

Those makes and their days' supplies: Jaguar, 19; Maserati, 22; Saab, 32; Volvo, 33; Peugeot, 37; Alfa Romeo, 120 and Renault, 148. In addition, there was the 285-day supply of IAI cars: 205 days for Pininfarina and 406 for Bertone.

Days-supply figures for imported trucks were Mazda, 22; Toyota, 29; Mitsubishi and Nissan, 40; Chrysler, 74, and Isuzu, 87.

Dingell, import firms attack passive-restraint rule

Continued from Page 2

make it harder for companies to meet the CAFE standards. Dingell also wants it made clear the 10 percent applies only to U. S. sales—not worldwide.

Dingell also questioned the provision that makers can return to installing only active belts if states with two-thirds of the U. S. population have belt-use laws. He wants to be sure that company efforts are not thwarted by last minute court cases.

In its petition for reconsideration, the AIA argued that lead time should not start until NHTSA has made a final decision on test procedures. AIA also wants more information on how convertibles will be handled and whether they should be counted during the phase-in period.

But the heart of the AIA proposal is a "bubble" concept to give companies flexibility by allowing them to carry forward and carry back models with passive restraints during the phase-in period.

Exceeding the percentage requirement could help meet a future and higher percentage; but failing to meet a percentage and requiring carryback would mean a penalty equivalent to allowing only one unit for a one-and-a-half unit.

Service volume continues gains

Continued from Page 1

proved 0.5 percent over the volume recorded in June, 1983.

Figures used in the Service Index are averages compiled from reports on shop operations from a cross-section of the nation's new-car dealers.

For the first half of 1984, service and parts business amounted to 117.4 percent of the volume done in the same period last year.

Leader in the six-month period was shop parts sales, up 25.3 percent, followed by sales of parts and accessories, up 20.1 percent, and gross profit, up 19 percent.

Labor sales increased 15.7 percent during the period, while repair orders written were up 8.0 percent.

SERVICE INDEX
109.2*

	June, '84 vs. June, '83	6 mos., '84 vs. 6 mos., '83
Gross Profit on All Labor and P&A Sales	+18.2%	+19.0%
Repair Orders Written	+ 0.5%	+ 8.0%
Total Labor Sales (Customer & Warranty)	+ 9.6%	+15.7%
Shop Parts Sales (Customer & Warranty)	+14.0%	+25.3%
Sales of All Parts and P&A	+ 7.8%	+20.1%

*—Survey by Automotive News shows that dealers' service and parts business in June, 1984, was 109.2 percent of business in June, 1983. Service business in the six months of 1984 was 117.4 percent of business in the corresponding period in 1983.

GM unit to name group director of public affairs

DETROIT. — General Motors' Chevrolet-Pontiac-GM of Canada Group will appoint a group director of public affairs on Sept. 1.

Public relations and internal communications functions will report to the new PA director, who also will work closely with GM's government relations and public policy organizations.

While GM's Buick-Oldsmobile-Cadillac Group also will announce public relations appointments in September, the organization is expected to be structured differently than C-P-C's.

PPG constructing Flint test facility

FLINT.—PPG Industries has broken ground for an automotive coatings applications test facility here adjacent to the new Buick City manufacturing and assembly complex.

PPG has been designated sole coatings supplier for Buick City. The PPG complex is slated to begin operation in February.

Chevy Baseball Hall of Fame addition

Rick Ferrell, left, who has been inducted into the Baseball Hall of Fame, donates his 1947 catcher's mask to Chevrolet's George Borst, manager, sales promotion, passenger-car merchandising. Ferrell's mask will be part of Chevrolet's Traveling Baseball Hall of Fame, which is slated to visit 100 malls in 1984.

UAW says poll shows public supports union's position

By Michelle Krebs
Financial Editor

The American public overwhelmingly supports the UAW's bargaining position in this year's contract talks, especially on the issue of job security, according to a public opinion poll conducted on behalf of the union.

"The public understands and supports our stand in our fight," Bieber said at a Detroit press conference at which portions of the survey results were disclosed. "The public realizes the central role the auto industry plays in our economy."

Bieber said that 70 percent of those surveyed believe American corporations have a responsibility to keep jobs in the U. S., and 84 percent oppose plans by U. S. auto companies to build more small cars overseas.

Eighty-two percent responded favorably to the union's bargaining stance of job security as the top priority coupled with "reasonable" wage and benefit gains. The job security aspect was the most popular with those surveyed; 73 percent responded that that was the portion of the union's position they liked the most.

The telephone survey of 1,515 adults across the U. S. was conducted by James Lauer and Associates, of Alexandria, Va., between June 23 and 25 at a cost of $35,000 to the union.

Though most of the survey was favorable to the union, portions were not.

"Not everything is the way I'd like it if I were writing a list to Santa Claus," Bieber admitted.

Overall, the respondents perceive the auto worker as a hard-working, dedicated individual trying to build high-quality vehicles. About three-quarters said so.

However, 51 percent said they thought auto workers resisted modern work practices and production methods that would make the industry more productive.

The public was also split on auto worker pay levels. Forty percent think they are overpaid, 39 percent said their pay is about right and only 9 percent think they are underpaid.

Bieber said he wasn't shocked by the findings since a Louis Harris poll conducted for Business Week magazine showed similar results.

"We'll have to work on that attitude," he said.

On the other hand, the American public isn't well informed about how much the auto companies are making and 45 percent weren't aware of what has been termed by some as the "obscene" bonuses paid to auto executives.

Of those who knew about the bonuses, however, 45 percent said they were excessive and only 7 percent thought the bonuses were in line with what the executives deserve.

As for the impact the survey results will have on negotiations at General Motors and Ford Motor Co., which are headed into their fifth week, Bieber expects nothing immediately.

"It shows we're on the right side of this fight," he said.

Trade deficit tops $19 billion in '83

Continued from Page 1

to continue to be competitive in Europe where sales have stagnated and competition has gotten intense.

In 1983, for example, just 1.2 percentage points and 68,200 units separated sales leader Ford Motor Co. from sixth-place finisher General Motors. In June of this year, sales leader Fiat is just 2.7 percent and 134,100 units ahead of sixth-place Renault.

"For the time being, promotional pricing policies in the home markets are being supported by the earnings on U. S. sales," Keller said.

1983 Automotive Trade Deficit

Country	Units	Amount
W. Germany	237,004	$ 3,398,000,000
Italy	5,298	70,471,000
UK	17,035	400,212,000
Sweden	114,414	1,095,823,000
Belgium	4,674	43,276,000
France	40,654	299,443,000
Total EEC	419,079	$ 5,307,225,000
Canada	313,347	$ 3,407,308,000
Japan	1,868,820	$10,725,111,000
All others	(18,432)	($245,239,000)
Total U. S. automotive trade deficit 1983	2.6 million	$19.2 billion

Source: U. S. International Trade Commission.

7 weeks ahead of 1983

Year's auto output tops 5 million

By Keith Gave
Detroit Reporter

The five-millionth domestic car of 1984 was assembled last Tuesday (Aug. 14), leading its 1983 counterpart by more than seven weeks. The five-millionth car last year was built Oct. 5.

Year to date, 5,078,860 cars have been produced in the U. S., a 25.13 percent improvement over last year's pace when 4,058,722 cars were finished in the same period.

Domestic manufacturers projected completion of 111,528 cars last week, 3.25 percent below the 115,275 completed the previous week, but 5.85 percent more than the year-ago week when 105,365 cars were produced.

Of last week's estimated car production in the U. S., General Motors accounted for 48.97 percent, followed by: Ford Motor Co., 32.88 percent; Chrysler Corp., 11.16 percent; American Motors, 4.30 percent, and Honda, 2.69 percent. Volkswagen of America remained idle due to model changeover.

GM had auto assembly plants in Detroit, Baltimore, Doraville (Ga.) and Lordstown (O.) down for model changeover. Its Flint G-line was scheduled to resume production today (Aug. 20) while its Oklahoma City plant was slated to get back to work Tuesday.

Meanwhile, GM scheduled two shifts of overtime Saturday (Aug. 18) at its Janesville (Wis.) plant and one shift at its Wentzville (Mo.) plant the same day.

Ford scheduled Saturday overtime at its Wayne (Mich.) and Wixom (Mich.) plants.

DeLorean's auto career one of color, controversy

Continued from Page 2

was elected a GM vice president and was named general manager at Pontiac.

He quickly beefed up the dealer body, created a youth-image program and was a prime mover in making Pontiac a regular contender for the No. 3 slot in sales.

In 1969, he was moved into the hot spot as general manager of Chevrolet, the youngest man ever to head that division.

In 1972, DeLorean became group vice president in charge of car and truck divisions and moved to the 14th floor in the GM Building in Detroit.

He left GM in 1973 amid reports his flamboyant and vocal personal and business styles did not sit well with others at the top in GM.

After a brief spell with the National Alliance of Businessmen in Washington, DeLorean moved back into the car business. In January, 1974, he formed John Z. DeLorean Corp. which later became DeLorean Mfg. and began the process of designing and building the car company, DeLorean Motor Co.

The DeLorean sports car went into production in Belfast in February, 1981, and ceased production in May, 1982. A few months later DeLorean was arrested in Los Angeles on the drug charges of which he was acquitted last week.

DeLorean wins full acquittal

Continued from Page 2

while Robert Perry, who assisted Walsh, said he was "shocked and surprised."

A statement released by the U.S. Attorney's office by Robert Bonner said, "The jury has spoken. That is the heart of the criminal justice system. As all who believe in the system must, we accept the verdict."

The acquittal came just two months short of the second anniversary of DeLorean's arrest on Oct. 19, 1982, at the Sheraton Plaza La Reina near the Los Angeles airport and a year after two others netted with DeLorean — William Morgan Hetrick and Stephen Arrington—changed their pleas to guilty under agreements struck with the U.S. Attorney's office.

The decision last week clears the way for sentencing of the pair, which was delayed until the conclusion of the case against DeLorean.

Ford in Canada 80 years

OAKVILLE, Ont. — Ford of Canada marked its 80th birthday Aug. 17, anniversary date of the company's charter. The first Canadian-built Ford, a Model C, was built Oct. 10, 1904.

Truck production climbs to 56,545; 2-millionth near

Domestic truck production rose slightly last week as output for the year neared the two-million mark.

Nissan's Smyrna (Tenn.) plant returned to production following three weeks of vacation, helping to bring the week's truck output to 56,545, a 4.07 percent increase over the previous week's 54,332 and a hefty 56.44 rise over the year-ago week's total of 36,145.

So far this year, 1,976,931 trucks have been assembled in the U. S., a 39.90 percent increase over the 1,413,118 built during the same 1983 period.

Both General Motors and Ford scheduled overtime on Saturday (Aug. 18) at truck plants. GM's Detroit plant and Ford's Lorain (O.) plant each scheduled one shift of overtime.

Week's production of cars, trucks rises in Canada

Canadian auto and truck production rose last week as the major manufacturers returned to full swing following vacations and model changeover.

Ford Motor Co. and General Motors were back to normal as the Canadian industry targeted 16,073 cars for production. That was a 30.98 percent increase over the previous week's 12,271 and a 77.37 percent rise above the 9,062 in the same week last year.

Year to date, 691,735 cars have been produced in Canada, an 11.55 percent increase over the 620,087 completed in the same period in 1983.

Canadian truck makers scheduled assembly of 13,631 units last week, a 1.35 percent increase over 13,449 the previous week, but a dramatic 112.92 percent rise over the 6,402 built in the same 1983 week.

So far, 507,050 trucks have been completed in Canada, a 57.74 percent improvement over the 321,448 in the same period last year.

Chrysler Newark plant sets production record

NEWARK, Del. — Chrysler Corp.'s Newark Assembly Plant established a production record of 262,175 passenger cars for the 1984 model year. The previous record was 266,435 vehicles built in the 1977 model year.

The 1984 total consisted of 108,004 Chrysler Town and Country, Dodge Aries and Plymouth Reliant station wagons and 154,171 Aries, Reliant and Chrysler LeBaron four-door sedans.

'Let's put on the gloves,' says World Congress keynoter

Tippett lashes out at auto industry naysayers

By Richard Johnson
Detroit Reporter

The U. S. auto industry may be riding high in the saddle again, but it is also taking some undeserved potshots from critics and naysayers, according to American Motors Chairman Paul Tippett.

In his keynote address last night (Aug. 26) at the opening of the 1984 Automotive News World Congress, Tippett said the same skeptics who not long ago predicted $3-a-gallon gasoline and the demise of two or more major U. S. auto manufacturers "are back at it with even more allegations, misconceptions and predictions."

The AMC chairman called on auto makers to "create a new, more accurate image of the progress we've made and the dynamic global industry that we truly are."

Tippett cited six major "misconceptions" he said are being circulated: The industry is making too much money; current profits stem from Japanese import restraints; government regulators have eased pressure on the industry; auto company executives are paid too much; the Japanese have entered a new era of trade cooperation, and the auto industry and "Smokestack America" in general are about to be eclipsed by a high-tech economy.

"It's time for us to put on the gloves and set the record straight," he said. "If we don't, we'll only make ourselves a larger target."

Tippett said industry opponents and critics are using reported earnings of $6.5 billion among Big Four companies for the first six months of 1984 as an excuse to "start beating on us again." However, he said, the manufacturers have yet to draw even against losses and investments totaling $42 billion from 1980-83.

"We're still about $35½ billion shy of getting back to the starting gate," he said. "If we continue at the current rate, we're still more than three years away from receiving that $35½ billion; three years away from just getting even. Is that your idea of making too much money? It's not mine."

Tippett defended auto industry capital outlays during the deep recession years when, he said, some skeptics regarded such investments in the U. S. as a form of throwing good money after bad.

"We can be proud that we stuck to our guns to return to profitability," he said.

Tippett denied that U. S. manufacturers are profitable

Bricklin-Yugo link traced

By John A. Russell
New York Staff Writer

NEW YORK. — Details on the connections between Occidental Petroleum and Bricklin Industries on the importing of the Yugoslavian-built subcompact Yugo 55 are slowly emerging, but no firm agreement has been signed.

While Occidental has refused to comment on any negotiations between the two companies, Malcolm Bricklin said last week that the two were "working out a deal."

In the case of the Yugo, Occidental is acting very much as a trading company helping the venture move along and would receive a royalty on the cars brought into the U. S.

No financial arrangements were revealed, though Bricklin said an agreement is near.

Bricklin does have an agreement with the manufacturer, Zastava, to be the sole importer

Continental for '85

Lincoln makes mechanical changes

The Lincoln Continental for 1985 looks like the '84 model on the outside, but changes have been made under the hood. Four-wheel Skid Control Brakes and a single accessory drive belt have been added. Story, other pictures are on Page 35.

Chrysler explores Korea as site for small-car factory

By Dan McCosh
Detroit Reporter

Chrysler Corp.'s negotiations with the Korean conglomerate Samsung Group to build a small car for the U. S. in the 1990s now are concentrating on a tentative proposal for an auto plant making some 300,000 cars annually in Korea, with production exported to the U. S. and Southeast Asia.

But Chrysler's Korean strategy still faces numerous obstacles, according to Chrysler insiders.

Neither Chrysler nor Samsung would confirm details of a report last week in the Korean press that the two companies were close to agreeing on a plan to set up a $400 million plant at Changhon, South Korea, to build a small car.

A Chrysler spokesman stressed that the two companies were only conducting a feasibility study, as previously reported.

Chrysler is interested in Korea as a low-cost source for its small cars, but sources close to the program say the company is viewing Korea mainly as a competitor for other overseas alternatives, mainly Japan and Mexico, rather than a replacement for U. S. production capacity.

During the next four years, Chrysler is planning three new cars: The P-body, an upscale subcompact; the J-body, an intermediate specialty car, and the C-body, a full-size front-drive car; plus a new light truck program.

The unanticipated popularity of older models, particularly the M-body rear-wheel drive full-size cars, is overstretching its existing U. S. pla[illegible] capacity.

Aside from cos[illegible]nalysis, this is a major incent[illegible] to go overseas with cars si[illegible] below the J-body.

• Chrysler also is ne[illegible]ing with its Japanese affiliate Mi[illegible]J-bishi Motor Co. Ltd. to share output of a contemplated Mitsubishi-built plant in the U. S., but those negotiations have been stalled pending Washing-

World Congress opens; Expo begins Tuesday

Automotive News Week under way

Automotive News Week in Detroit will be in full swing tomorrow (Aug. 28), as the third annual Automotive News World Expo brings the global automotive marketplace to Cobo Hall.

The World Expo, a three-day international buy-sell trade fair, features all aspects of the automotive original equipment business under one roof and is expected to attract thousands of OEM executives.

Automotive News Week began Sunday with the opening of the ninth annual Automotive News World Congres at the Westin Hotel. Keynoter Paul Tippett, American Motors chairman, delivered a state of the industry address.

World Congress participants, who are professionals in the auto industry and related businesses, attend 3½ days of seminar sessions dealing with the future of the industry.

Social event of the week will be tomorrow (Aug. 28) when World Expo and World Congress participants will gather in the Westin Hotel's Renaissance Ballroom for a Tuesday Evening Gala.

After a cocktail reception and dinner, Gala attendees will hear presentations by George Karnsund, president, Saab-Scania AB, and Bennett Bidwell, executive vice president, Chrysler Corp.

Karnsund will give an overview of the European auto industry, while Bidwell's topic is Detroit: Damned if it Does, Damned if it Doesn't.

The price for those who are not World Congress registrants is $38, which includes cocktails at 5:30, dinner at 6:30 and the program, which begins at 7:45. For information, call the Automotive News World Congress registration desk at the hotel at (313) 259-9336.

While World Congress is an international forum for analysis of world automotive markets and trends by 34 faculty members who are movers and shakers in the industry and related fields, World Expo unites buyers and sellers from around the world.

Thirty vehicle manufacturers are staffing business offices at the World Expo. More than 200 exhibitors from around the world will display and sell components, materials, machinery and services.

Cobo Hall, site of the World Expo, has been designated an international free trade zone during the show, allowing overseas exhibitors to ship their products duty-free.

breaking news

UAW to pick strike target this week

DETROIT.—The UAW is expected to choose its strike target this week after it receives economic proposals from Ford and General Motors. The union expects those proposals early this week and has called a meeting of its GM and Ford National Bargaining Councils for Wednesday. The International Executive Board will meet directly after the councils and it is expected to choose the target company then. (Earlier story on page 2).

GM resumes output of Calais, Somerset Regal

LANSING.—Production was scheduled to resume today (Aug. 27) at Oldsmobile's North Complex, which assembles the Olds Calais and Buick Somerset Regal, two of the new GM20 cars. The plant has been down since Aug. 8 because of poor-quality parts. Oldsmobile did not identify the part involved. A second complex, which builds the Calais and the Pontiac Grand Am was not affected because it has just started

Coming in October

Lincoln-Mercury will introduce the Merkur XR4Ti in October. It is a version of the Ford Sierra.

Mercury Merkur intro scheduled for October

Lincoln Mercury's introduction of the German-built Merkur XR4Ti, pushed back by the German metalworkers' seven-week strike, is slated for sometime in October.

The two-door, five-passenger sports sedan, designed and engineered by Ford of Germany, is powered by a turbocharged electronically fuel-injected 4-cylinder engine. The car is a version of the Ford Sierra.

The Merkur XR4Ti's body design has no traditional grille and no bright plating. With its unusual biplane rear spoiler, drag coefficient is 0.32.

The Merkur has fully independent front and rear suspension, variable-ratio power rack-and-pinion steering, power disk/drum brakes, a five-speed manual overdrive transmission and a turbocharged engine.

Also standard are air conditioning, power windows, AM/FM stereo cassette four-speaker radio, eight-way adjustable front seats, power mirrors and rear washer/wiper system.

Only a few items are available as options: Metallic paint, heated seats, manual three-way glass sunroof, three-speed automatic transmission and leather seat trim.

The XR4Ti is 178.4 inches long, 54.8 inches high, 68.0 inches wide and sits on a 102.7-inch wheelbase. Curb weight is 2,910 pounds.

Combined city-highway fuel economy figures are 23.8 MPG for the manual and 22.3 MPG for the automatic.

GM, UAW open training center in Saginaw

SAGINAW, Mich. — General Motors and the UAW have established a Skills Development and Training Center here to assist Region 1-D laid-off GM-UAW workers in job retraining and job placement.

Approximately 5,700 persons from the Bay City-Saginaw area will be eligible to participate in the program. It is estimated that some 1,500 persons will be served by the program during its first year of operation.

'Test drive' takes Chevy salesman through 3 states

ATLANTIC CITY. — Rudolph Jean-Louis, a salesman for the Chevrolet 21 dealership here, apparently thought he was assisting a customer who wanted to see a vehicle and take it for a test drive.

He got the tags for a 1984 Camaro Z28 and let the "customer" take the wheel, according to local police.

But instead of a two-mile test spin, the salesman was taken on a drive through three states. When the salesman did not return, officials at Chevrolet 21 reported to police that their salesman apparently had been abducted.

Police received a phone call that evening from state police on the Connecticut Turnpike who said that they had located the salesman. The "customer" had stopped the car at a toll booth but did not have the money for the toll. At that point, the "customer" exited the vehicle. The salesman slid behind the wheel and drove away.

The salesman was unharmed and was on his way back from Connecticut late that night. The "customer" is being sought by police.

Total is 189,209, up 17 pct. over 1983

U. S. car sales climb in mid-August

By Jenny L. King
Staff Writer

Domestic new-car sales snapped their one-period losing streak with a 17.45-percent gain Aug. 11-20. Sales on a daily-rate basis were up an even more impressive 32.13 percent, with eight days in the period this year compared with nine in 1983.

U. S. new-car sales for mid-August totaled 189,209, up 17.45 percent from 161,104 a year ago and up 42.95 percent from the paltry 132,356 recorded two years earlier.

The most recent daily selling rate averaged 23,651, 32.13 percent ahead of the 17,900 of a year ago.

Ford Motor Co. reported the biggest sales gain for the mid-month period, up 25.48 percent, to 46,138 from 36,769 last year (up 41.18 percent daily rate). General Motors sales were up 16.07 percent, to 112,259 from 96,720 (up 30.57 percent daily rate).

Chrysler Corp. sales of 21,863 passenger cars were up 14.02 percent from 19,174 (up 28.31 percent daily rate). American Motors reported estimated sales of 4,800 cars, up 11.63 percent from 4,300 (plus 25.52 percent daily rate).

Honda was up 20.70 percent, to 2,525 from 2,092 (up 36.21 percent daily rate), and Volkswagen dropped 20.74 percent, to 1,624 from 2,049 (down 10.96 percent daily rate).

• Ford's sales increase earned it an extra 1.5 percentage points of the market, climbing to 24.38 percent from 22.82 percent last year. GM slipped to 59.33 percent from 60.04 percent. Chrysler was off to 11.56 percent from 11.90 percent. AMC sales represented 2.54 percent of the total, down from 2.67 percent. Honda earned 1.33 percent, up from 1.30 percent, and VW dropped to 0.86 percent from 1.27 percent.

Sales profiles for the various domestic makes included increases at Chrysler Corp. of 5.26 percent for Plymouth, 16.25 percent for Chrysler and 19.97 percent for Dodge. Ford Motor Co.'s Ford was up 21.74 percent, Mercury was up 36.84 percent and Lincoln was up 17.02 percent.

At GM, Buick was up 10.38 percent, Cadillac was up 9.49 percent, Chevrolet was up 23.63 percent, Oldsmobile was up 7.01 percent and Pontiac was up 27.11 percent.

AMC was down 44.44 percent and Renault was up 26.47 percent. VW dropped 20.74 percent and Honda was up 20.70 percent.

DeLorean's acquittal spurs demand for car

Interested in a DeLorean sports car? A lot of people apparently have become so since John Z. DeLorean was acquitted of drug charges on Aug. 16.

"Sales have been incredible. There are only 20 left," said Donald L. Bowman, general manager of the DeLorean Division of Consolidated Stores Corp. of Columbus, O.

Consolidated purchased the 1,849-unit inventory of the bankrupt DeLorean Motor Co. and has been selling new DeLoreans since February, 1983.

Bowman said, "We've sold 78 cars since Thursday afternoon . . . We're selling them at $22,500. We didn't raise our price, though I'm sure we could have."

He noted that Consolidated has a "tremendous" spare parts supply which it distributes through Kapac, Inc., of Columbus.

Spenseley Chevrolet, Cohasset, Mass., also experienced renewed interest in the DeLorean — it had two new models in storage since 1981 — after the former car maker's acquittal. But interest is apparently waning.

"The first three or four days (following the acquittal) we had a number of inquiries. We sold one the very next day and wrote a deal on the other one but the buyer couldn't get financing. We didn't get a replacement order," said Dewey Beach, sales manager.

The cars sold for $26,175, the 1981 suggested retail price, Beach said.

Don Massey Cadillac, Inc., Plymouth, Mich., sold its two used DeLoreans as a result of telephone inquiries it received after the DeLorean acquittal, according to John Schott, used-car manager. He said they sold at a little over the price they would have brought several months ago.

"I'd say, if we had a half dozen, we'd have sold them all," he said.

National, N.K.K. sign

PITTSBURGH. — Executives of National Intergroup, Inc. and Nippon Kokkan K.K. finalized the agreement by which N.K.K. will buy a 50-percent stake in National Steel Corp., owned by NII, for $292 million in cash and notes.

Auto makers battle to build sleek cars

Aerodynamics: A weapon in styling and sales

By Jeff Spivak
Detroit Reporter

Terry Henline drew a crowd around his latest styling creation, the new Grand Am: Talking aero. Talking sloped hood, raked windshield and brusque rear window. Talking 1985.

Pontiac's chief exterior designer talked his way to the heart of the matter: "It's got nice touches," he said. "It's more rounded and the back lights are different than past practice, but the car's not aerodynamically driven."

Yes, the U.S. auto makers have added more artillery to the design war. But in the battle to establish more sleek—and modern—cars to appease the yuppies, the '85 model year won't witness the aerodynamic innovations of the previous two years.

General Motors has unveiled to the press a new line of sporty cars, the GM20 or N-body cars, of which the Grand Am is Pontiac's version. The now-familiar GM look consisting of sloping hood, right-angle notchback roofline and high rear deck makes an appearance on yet another platform.

Pontiac, though, will steal the show by introducing the car with what it claims will be the lowest drag coefficient of any production vehicle in the world.

Ford Motor Co. will enter Chrysler's mini-van market, having applied its aero approach for the Aerostar. The extreme wind-tunnel design, with the windshield and hood planes sloped at almost the

Volvo honors 14 salespeople for performance

ROCKLEIGH, N. J.—Fourteen Volvo salespeople have been elected to the North American Top Car Guild and invited to participate in a study trip to Volvo North American headquarters here.

The salespeople are being honored, said William J. Hoover, marketing vice president, for their high levels of performance and professionalism.

Guild members are: Bruce P. Andrews, Orange County Volvo, Garden Grove, Calif.; William C. Wasilewski, Volvo City West, Milford, Conn.; Hashim Dadabhoy, S.T.S. Motors, Scarborough, Ont., and Daniel Trent Weaver, Weaver Brothers, Raleigh, N. C.

More are: Robert M. McLean, 1500 Best Motors, Rochester, N. Y.; Donald R. Moonen, Brentwood Volvo, St. Louis; Bradford F. Hughes, Chapman Motors, Halifax, Nova Scotia; Robert J. Fredeen, Herzog Motors, Beaverton, Ore., and Steve Lehrer, Dyer & Dyer, Chamblee, Ga.

Rounding out the group are: Athur E. Awe, Volvoville U.S.A., Massapequa, N. Y.; Phillip Bazell, N. W. McKevitt, Berkeley, Calif.; John Pfau, Volvo Sales & Service Center, Lisle, Ill.; Herb Pinney Sr., Golden Imports, Beaumont, Tex., and Cameron MacPherson, Specialty Motor Cars, North Vancouver, B. C.

New York dealers form DADD chapter

NEW YORK. — James Farley, president of the Greater New York Automobile Dealers Asn., announced the formation of a local chapter of Dealers Against Drunk Driving (DADD).

The local unit is part of a national movement of auto dealers. DADD seeks to educate all segments of the community about the tragedies caused by driving while intoxicated.

Ford to acquire Pilkington share of Ford Glass

TORONTO. — Ford Motor Co. has reached an agreement with Pilkington Brothers PLC, of St. Helens, England, to acquire Pilkington's 49 percent interest in Ford Glass, Ltd., of Toronto.

Ford Glass, a subsidiary of Ford Motor Co., supplies curtain-wall systems and other products for high-rise commercial projects.

Ford Glass has a float glass plant in Scarborough, Ont., and the only high-vacuum coating line in Canada at its Downsview (Ont.) plant where it manufactures insulating glass units, mirrors and tempered glass. The firm also operates 19 retail glass centers across Canada.

Domestics lead the way

Month's registrations reach a high for 1984

By Jenny L. King
Staff Writer

The new-car registrations total moved above the 900,000 mark for the first time this year in June, climbing 4.73 percent above the May level and 6.80 percent above the figure for June, 1983.

According to statistics from R. L. Polk & Co., U. S. passenger-car registrations numbered 927,849 in June. The May total was 885,974, and in June, 1983, it was 868,738.

Domestic registrations of 703,901 were up 2.43 percent from May's 687,178. The June figure surpassed the 637,182 of a year earlier by 10.47 percent.

Imports accounted for 24.14 percent of total new-car registrations in June, down from 26.65 percent a year ago, though up from 22.44 percent in May. Import registrations of 223,948 were down 3.29 percent from 231,556 in June of 1983.

As imports dropped 2.51 percentage points for the month, and American Motors dipped 0.36 percentage points (to 1.80 percent), the competition increased shares of the market. Ford Motor Co. was up 1.26 percentage points, to 18.53 percent from 17.27 percent last year.

General Motors gained 0.87 percentage points in June, to 45.65 percent from 44.78 percent. Chrysler Corp. was up 0.45 percentage points, to 9.88 percent from 9.43 percent. Miscellaneous domestics again were too few in numbers to earn a share of the market: They slipped into obscurity from 0.01 percent a year ago.

• Registrations for the first half of 1984 were up 17.76 percent to 5,015,409 from 4,258,857 through June, 1983. Total registrations topped the first half of 1982 by more than 1.2 million, or 32.75 percent. Two years ago the total was 3,778,109.

First-half domestic registrations were up 24.39 percent this year compared with 1983, to 3,816,981 from 3,068,670. The difference between 1984 and 1982 first half totals was 41.47 percent: Two years ago domestics numbered 2,698,079 January through June.

First-half import registrations were up a scant 0.69 percent this year, to 1,198,428 from 1,190,187. Their share of the market plunged more than four percentage points, to 23.90 percent from 27.95 percent.

American Motors, Chrysler and the miscellaneous domestics also lost ground in the first half. AMC was down 0.48 percentage points, to 1.84 percent from 2.32 percent. Chrysler slipped 0.35 percentage points, to 9.41 percent from 9.76 percent, and miscellaneous domestics were erased to 0.00 percent from 0.01 percent.

Ford Motor Co., and each of its three makes, was up in its share of the market for the first half. The corporation was up 2.30 percentage points to 18.95 percent; Ford climbed 1.25 percentage points, Mercury was up 0.78 percentage points, and Lincoln was up 0.27 percentage points.

GM expanded to 45.90 percent of the total market from 43.31 percent. Three of its makes, Chevrolet, Oldsmobile and Pontiac, were up but Buick and Cadillac lost in shares of the market.

BLS reports productivity rise in vehicle field

WASHINGTON. — Productivity in the motor-vehicle industry rose 14.2 percent in 1983, according to new figures released by the U.S. Bureau of Labor Statistics (BLS).

The BLS reported that the large gain was due to a 30.6-percent increase in auto industry output, coupled with a 14.3-percent increase in employe hours.

The BLS said that demand for motor vehicles rose significantly in 1983 compared with 1982, when output declined 8 percent.

The big upturn in auto industry productivity also helped spur output among other industrial sectors, including steel, the BLS said.

Chrysler, GM boost industry's total

Week's output jumps to 135,401

Domestic auto production rose sharply last week as Chrysler Corp. and General Motors scheduled overtime.

U. S. manufacturers projected completion of 135,401 cars, up 15.84 percent from the 116,890 produced the previous week, but down 2.01 percent from the 138,176 built in the same week last year.

Chrysler scheduled daily assembly at all six of its domestic plants with Belvidere (Ill.) and St. Louis No. 2 working two 8-hour Saturday (Aug. 25) overtime shifts.

GM scheduled two shifts of Saturday (Aug. 25) overtime at its Lakewood (Ga.) plant and one shift each at Linden (N. J.), Janesville (Wis.) and Lordstown (O.). Ford slated one shift of Saturday overtime at its Wayne (Mich.) plant.

Meanwhile, Volkswagen resumed production last week after more than a month off for model changeover, although output was limited. A company spokesman said U. S. production wouldn't be back to normal until at least December.

Of last week's estimated production, General Motors accounted for 55.30 percent, followed by: Ford Motor Co., 26.77 percent; Chrysler, 12.11 percent; American Motors, 3.55 percent; Honda, 2.20 percent, and Volkswagen of America, .07 percent.

Chrysler, Korean firm talk about small car for U. S.

Continued from Page 1

ton's decision on the Voluntary Restraint Agreement (VRA) limiting exports of Japanese cars to the U. S., which expires March 31, 1985.

A Korean-built car presumably would be exempt from the VRA. Regardless, the Mitsubishi plan is much closer to reality.

Although a Korean car plant could conceivably be built by 1987, it would be unlikely to be able to supply any volume to the U. S. much before 1990, the sources said.

Chrysler would have to supply technical support for both the car and the plant, since Samsung has no experience in the car business.

But the major stumbling block is the Korean Government's opposition to expanding car production beyond the two existing manufacturers: Hyundai Motor Co. Ltd., in which Japan's Mitsubishi holds 10 percent equity, and Daewoo Motor Co., Ltd., 50 percent owned by General Motors.

Korea concluded an economic plan in 1983 that ended passenger-car production at a third auto maker, Kia Motor, and concurrently GM lot management control at Daewoo.

Recently, GM anounced that Daewoo would build a new plant to produce 167,000 cars annually based on the new Opel Kadett, with about 80,000 units sold in the U. S. through GM divisions beginning in 1986.

Now Samsung, which like Hyundai and Daewoo is a heavy industrial conglomerate, must convince the Korean Government that a third player in Korea would not reverse efforts to increase production efficiency by consolidating an industry now totaling about 100,000 cars annually.

Complicating Samsung's position is Mitsubishi's interest in Hyundai, a potential competitor, since Chrysler is a 15 percent holder in Mitsubishi, which also is a major supplier of Chrysler cars and components.

Conspiciously absent from the Korean scenario is Ford Motor Co., which had a working arrangement with Hyundai in the late 1960s.

Ford recently announced an expansion of its facilities in Taiwan, but mainly has been relying heavily on its Japanese affiliate Mazda Motors, Ltd., for small cars for the Southeast Asian market and the U. S.

Responding to a question about Chrysler's Korean plans, Donald F. Ephlin, UAW vice president and director of the GM department, said the union is very concerned about the importing of vehicles and components.

Canadian makers post production gains for week

Auto and truck production in Canada posted strong gains again last week as output picked up following model changeover.

The Canadian industry targeted 17,110 cars for completion, a 13.67 percent increase over the previous week's build of 15,052, and an 11.65 percent rise over the 15,324 finished in the same week last year.

Truck production was scheduled at 16,002, a 19.92 percent increase over the 13,342 completed a week earlier, and 31.96 percent better than the 12,126 trucks completed in the year-ago week.

To date this year, 707,824 cars have been produced in Canada, an 11.68 percent increase over the 633,777 completed in the same period last year. And Canadians have built 522,763 trucks so far this year, a 57.07 percent improvement over last year's 332,821.

Truck production tops 2 million; 39 pct. above '83

U. S. manufacturers produced their two-millionth truck of the year last week as production continued at a pace nearly 40 percent faster than in 1983.

Year to date, 2,037,719 trucks have been built, a 39.31 percent rise above the 1,456,429 built during the same period last year.

Last week, domestic truck makers slated 59,109 trucks for production, a 1.52 percent increase over the 58,224 units completed last week, and 38.17 percent more than the 42,780 in the year-ago week.

Both General Motors and Ford scheduled overtime on Saturday (Aug. 25) at truck plants. GM's Detroit and Janesville (Wis.) plants and Ford's Lorain (O.) plant scheduled one shift of overtime.

Chrysler Corp. scheduled two eight-hour Saturday (Aug. 25) overtime shifts at the company's Warren (Mich.) assembly plant.

2 strike targets picked; contract clock ticks away

By Marjorie Sorge
Labor Editor

DETROIT. — On top of the complex issues of economics, job security and outsourcing, the major behind-the-scenes issue in the auto contract talks is the continuation of pattern bargaining.

Last week, the UAW chose both General Motors and Ford Motor Co. as targets, claiming that the economic proposals from both were inadequate and that the best strategy would be to continue talks at both firms. The two contracts expire Sept. 14 and as that deadline approaches a single target company may be chosen. That decision will be totally up to UAW President Owen Bieber.

The last time the UAW chose twin targets was in 1970, when GM and Chrysler Corp. were picked. In the final days, GM was chosen and there was a 67-day strike. GM was also the target in 1979. There was no strike and there were pattern agreements. There was no target picked in 1982. Both sides are still optimistic a settlement can be reached this year without a strike.

Proposals from GM and Ford, presented last week, are vastly different, indicating the companies are not interested in traditional pattern agreements. For example, GM proposed to continue profit-sharing with some modifications and offered two lump-sum payments in a three-year agreement, $600 in the first, $300 in the second and nothing in the third. Ford offered no wage increases and said profit sharing was enough.

Pattern contracts are traditionally negotiated at the target company, then transferred to the other firm with some modifications. That pattern was cracked in 1982 when concession packages were bargained at Ford and GM.

"What we are looking to do is put together a total agreement that obtains those goals that we

Proposals: Page 54.

have before us to do," said UAW President Owen Bieber. ". . . Historically, with the exception of 1982, it has always been a pattern agreement. I think there are a lot of things which indicate that a lot of the pieces are back together. By the same token those pattern agreements are not always identical word for word in each instance. You have to look at the basic goals and the basic priorities we have set forth."

The idea of a return to pattern agreements met with resistance at Ford.

"If the plan (dual targets) reflects an opportunity for the companies to arrive separately at clearly independent agreements it might be a great boon for the industry," said Peter J. Pestillo, Ford vice president, labor relations. "Maybe we are going in sufficiently different ways that separate agreements are in order. If it instead embraces a need to bargain separately and simultaneously arrive at a common agreement, it introduces a real complexity that is a serious issue.

"If the concept is that we will arrive at one time with the equivalent of two agreements

Diversity a trademark of World Expo exhibits

By Colleen Pelli and Jeff Stivak

You never know whom you will meet or what new business opportunities you will find at the Automotive News World Expo. The diversity of exhibitors is one of the Expo's attractions.

This year, Pontiac brought a boat. Cadillac brought a 1931-model V-16 Dual-Cowl Phaeton. Hess & Eisenhardt displayed its Oldsmobile Toronado Caliente. Waller Motors showed its new patented sinusoidal cam lobe ening.

And by far the largest vehicle on display was the tall integral sleeper made by Volvo White.

For three days last week the "Motor Capital of the World" became a global crossroads for buying and selling by auto manufacturers and suppliers. The third annual World Expo, held at Detroit's Cobo Hall, attracted more than 200 exhibitors this year, up from 175 last year. According to Tony Merpi, managing director of the event, "We are pleased at the number of people who are back here for the second and third time. They conducted business here before. They are the ones that were aggressive and made appointments with people and are back. They are the successful ones."

Merpi added, "Exhibitors and attendees alike can literally compress miles of travel hours into three days of business dis-

breaking news

GM price hike averages $292

DETROIT.—General Motors said introductory prices of its 1985-model passenger cars will be increased by an average of 2.3 percent, or $292, over the comparably equipped 1984 models. GM said the hike provides 2.0 percent for increased costs and 0.3 percent to recognize product improvements.

Toyota-Chevy revives Nova name

DETROIT.—General Motors reportedly plans to call its new subcompact, built at its Fremont, Calif. plant run jointly with Toyota Motor Co. Ltd., "Nova," resurrecting the name of an old Chevrolet compact.

Starr named Chevrolet sales chief

DETROIT. — Robert W. Starr, 53, has been appointed Chevrolet general sales manager, succeeding Robert E. Cook, 61, who will head a study for the Chevrolet-Pontiac-Canada Group of General Motors until he retires next April. Starr has been assistant general sales manager in charge of Chev-

Bidwell says auto makers don't tell their story effectively

Communication—a Detroit failure

By Matt DeLorenzo

Citing the auto industry's failure to communicate its side of the story effectively, Bennett E. Bidwell, Chrysler executive vice president, said Detroit is partly to blame for its negative image.

Bidwell's comments came during the Automotive News World Congress last week.

By not taking the lead in being heard, the industry often suffers by "trying to ride out the storm." As a result, when anything happens, Bidwell said Detroit is damned if it does, damned if it doesn't.

Reciting a litany of past blunders by Detroit over the last decade, Bidwell said the industry had been criticized for failing to anticipate demand for fuel-efficient cars during the two oil shocks, chastised for driveability problems when it tried to use low power-to-weight ratios to improve fuel economy, blamed for high prices and low quality.

He said things turned around in the early '80s. Detroit, Bidwell explained, "cut its costs to the bone. It got rid of the frills and brought its break even under control.

"It went to work, no-holds barred, on quality. It had the guts to continue to pour billions of dollars into new product programs and high-tech manufacturing, design and processing systems . . . even as it was losing its capital base in huge chunks."

• Bidwell said the program worked. "Chrysler made it through, interest rates declined, the inflation rate dropped, the market boomed, thousands of workers were called back, and the American auto industry returned to record levels of profitability.

"And Detroit stepped back, with justifiable pride and wait-

Cook promises rewards, discipline

Porsche to use system to work toward goals

By Arthur Flax
Assistant Truck Editor

Having resigned itself to participating in the traditional dealer franchise system, Porsche will work within the system toward the goals it set when it tried to change the system, John A. Cook, president and chief executive officer of Porsche Cars North America, Inc., said last week.

Cook addressed the Automotive News World Congress.

Last February, Porsche tried to change its way of doing business because it wanted to improve customer satisfaction with its product, and because it wanted to "gain control of its destiny," Cook said.

Under the traditional dealer system, Cook said, "We will insist that the customer is treated with respect and will receive exceptional service."

He added, "We will reward dealers who treat customers well and build markets . . . We will give dealers an opportunity to be exposed to training . . . We will inject some discipline into the organization. (If a dealer has) no parts, no training, (he'll get) no cars."

Cook characterized Porsche owners as "Super Achievers" who expect the best.

"They earn at least $75,000 a year, work 60 to 80 hours a week and have high standards of excellence and high levels of expectations," he said.

Porsche broke away from its long-time importer, Volkswagen of America, because it felt no mass merchandiser could concentrate on its limited production in an appropriate manner, according to Cook.

Cook said, "It's not good enough to build the best product anymore. We felt it was important to get in the retail situation. We will continue to build a unique product and we will build a retail organization that is the best."

As of Sept. 1, Cook said, Porsche Cars North America began importing and distributing cars in the U.S. He said 303 dealers have signed to sell and service the cars.

Porsche had proposed the establishment of 40 company-operated centers, with dealers serving as agencies. The proposal, Cook said, would have cut dealer costs, but also their margins.

Dealers answered the proposal with a barrage of lawsuits. Porsche was forced to go back to the traditional franchise system.

"It seems we had little choice," Cook said. "We could spend two years in court, or four months getting our company in busines."

He added, "Our attorneys said we could win, but in two years . . . the franchise system . . . is too strong to change . . .

"We're stuck with the traditional system until the general public gets fed up. You remember what happened with buzzers and cutting wires under the dashboard."

The lessons Porsche learned

Dauch talks H-car

Richard E. Dauch, Chrysler executive vice president, told the Automotive News World Congress Chrysler's new Sterling Heights assembly plant will be a "showplace" that will turn out high-quality H-cars beginning this month.

Cars to roll next April

Runyon maps success of Nissan's U.S. plant

By Joseph Bohn
Marketing Editor

Nissan Motor Mfg. Corp., U.S.A., has proved that U.S.-built vehicles can be competitive in cost and quality, and its high degree of employe communications and involvement is a major reason for its success, according to president Marvin T. Runyon.

Nissan Motor Co., Ltd., has an extensive "Vehicle Evaluation System" in which it compares vehicles from Japanese plants with those made at others around the world.

"Our VES scores started out equal to or better than the corporate goals established by our parent company, and we've continued to maintain this level throughout our production line acceleration," Runyon told the Automotive News World Congress.

Encouraged by its success in building trucks, Nissan will begin building its two-door Sentra model at Smyrna, Tenn., in April, 1985, while continuing to build trucks at a rate of 10,000 per month.

"We expect to begin a two-shift operation in June of next year and work toward building up to 5,000 Sentras a month along with up to 10,000 trucks," Runyon said.

Over the next three years, Nissan will add a four-door model and increase production to 100,000 cars and 140,000 trucks annually—its maximum capacity at Smyrna.

"Our 3.4-million-square-foot facility was designed and constructed with the capacity of building 240,000 vehicles, so we will not have to expand our physical operation to introduce cars," Runyon said.

An additional $85 million in tooling and equipment will be spent to handle car production.

• "Because of the timetable on the Sentra launch, we won't do stamping initially at Nissan in Tennessee for Sentra," Runyon said. "However, over the three-year period, we will be changing to in-house stamping of 57 panels, which include 42 large parts and 15 small parts."

A 3,200-ton transfer press will be installed to upgrade the capacity for those panels.

In the body assembly area, the re-spot line will be modified to assemble both cars and trucks, and other unique car assembly equipment will be installed.

Automated equipment will be added which will ultimately do 70 percent of the welding. At that time, major sub-assembly operations, such as doors, hoods, and trunk lids will be changed to in-house operations.

All paint processes will be common for both cars and trucks. This means conveyors,

Imports post threat to supplier revival, he says

Bieber: Pattern bargaining to stay

By Marjorie Sorge
Labor Editor

Pattern bargaining is still a very important part of the UAW's negotiating strategy and and will not disappear in the current talks with Ford and General Motors, according to UAW President Owen Bieber.

He also told the Automotive News World Congress that many suppliers will go out of business if the Big Three auto makers are allowed to continue to import foreign vehicles and parts for the U.S. market.

Bieber told the Congress he sees very little difference in the bargaining in this year's talks when, compared with those of previous years.

Pattern bargaining is reaching an agreement with one maker and then transferring it to the other company with a little tailoring to meet the needs of the other firms.

However, in the early 1980s, concessions contracts were negotiated at Chrysler Corp., which not only removed that company from pattern bargaining but set wages substantially below those at Ford and GM. The Big Two negotiated away from the pattern in 1982.

In last year's talks with Chrysler, workers were given current wage parity with Ford and GM. While the Chrysler/UAW contract does not expire until October, 1985, the UAW has already indicated it intends to try to reopen that contract in light of Chrysler's record profits this year.

While Chrysler Chairman Lee Iacocca told the Detroit News last week he is not interested in early talks, Bieber told the World Congress he expects to be back at the table with Chrysler before the contract expires.

Bieber indicated this move is part of the UAW's master plan to get the Big Three companies back on pattern.

However, economic proposals presented to the UAW by Ford and GM last week were substantially different and, while they were presented on the same day, it is unlikely the Big Two are interested in pattern contracts.

• Bieber also warned the attendees that outsourcing plans by the U.S. car manufacturers threaten the well-being of the supplier and parts industries.

"GM and Ford and Chrysler won't be buying many domestic parts for the cars they build in Mexico and Japan and Korea and Europe," he said. "And the temporary boom we're in right now will become a bust for many of you very shortly if the Big Three implement their foreign sourcing strategies.

"The bottom line is that a lot of you are going to go out of business if GM, Ford and Chrysler proceed with their plans to import more of the cars they sell," he said.

During the question-and-answer period, Bieber was asked how much interchange there is between the present union leadership and the retirees such as past Presidents Doug Fraser and Leonard Woodcock and former Vice President Irving Bluestone.

"They are all good friends of mine, all good friends of my fellow officers, all good friends of the International Executive Board," Bieber said.

"I am now the president of the UAW. The other people who occupy the offices have the responsibility of formulating the policies and trying to win those policies at the collective bargaining table.

"Just as Walter Reuther was the president during his term in office, Leonard Woodcock was the president during his term in office, and Doug Fraser during his term in office, Owen Bieber is going to be the president in his term in office as well."

Nissan '85 cars increase $135; trucks up $87

CARSON, Calif.—Nissan Motor Corp. in U.S.A. has raised prices an average of $135 on some of its '85 cars.

The increase consists of $123 on the base vehicles and $12 on optional equipment.

Increases announced last week were $100 on all Stanza and Sentra models, $150 on Pulsar NX and $200 on the 300-ZX.

Nissan's lowest-priced car, the Sentra standard two-door sedan, is priced at $5,499 for 1985.

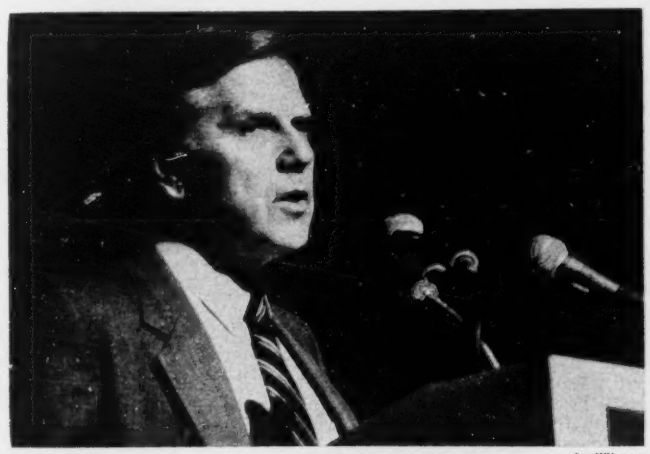
Two car lines have not yet been priced. The Maxima figures will be announced shortly before the '85 model goes on sale Oct. 1, and the 200-SX will be priced around Jan. 1.

Other 1985 models are being shipped to dealers and may be sold as soon as they are received.

Nissan truck prices have been raised an average of $87 for 1985. The breakdown is $81 on the base truck and $6 for optional equipment.

The regular bed standard truck is unchanged at $5,999, and other trucks have been hiked $100 to $250.

Nissan said the combined increase on its cars and trucks is $124, or 1.3 percent. The base vehicles rose an average of $113 and optional equipment went up $11.



Joe Wilssens

Cook explains Porsche's breakaway

Porsche broke away from Volkswagen of America because it wanted marketing control it felt a mass marketer could not provide, John A. Cook, president of the new Porsche Cars North America, told his audience at the Automotive News World Congress. Building a good product is not enough, he said. Service must be equally good, and Porsche is committed to a superior dealer network.

Aerodynamics plus look of a classic

The new International 9370 long-nose conventional tractor, according to International Harvester's Truck Group, combines "highly advanced aerodynamics with the looks of a classic." It shares many of the design features in the earlier 9670 cabover model.

IH eyes wider share of a premium market

By Jack Walsh
Truck Editor

KANSAS CITY.—International Harvester is seeking a wider share of the premium conventional market with the introduction of the 9370, which it is promoting as the "Rolls-Royce of the trucking industry."

The new conventional, which is being built in Harvester's Canadian plant in Chatham, Ont., replaces the 4200 and 4300 Series Transtar conventionals and features a grille similar to the Rolls-Royce.

Thomas L. Dougherty, Truck Group marketing vice president, said International now accounts for 12.6 percent of the premium conventional sales in the U. S., and hopes to expand its share to more than 20 percent within three years.

He said the Truck Group is launching a special program — Project 10—to increase its penetration of this market by 10 percentage points by 1987.

"Our efforts will be concentrated in the West, where the potential is greatest for the premium conventional," Dougherty explained. "The dealers who will be participating in Project 10, as well as the Truck Group, will be spending extra money to help achieve this objective."

• The Truck Group currently is demonstrating the 9370 at showings in 29 locations throughout the U. S., to which International dealers have been invited to bring customers and prospects.

Dougherty said the major competitors in the premium-conventional market include International, Kenworth, Peterbilt, Freightliner, White and the GMC General.

He said the Truck Group estimates that about 20,000 premium conventionals will be sold at retail industrywide in the U. S. in calendar 1984.

The price of the new 9370 will

'Wrangler' hits the Southwest

Bill Barnes, center, Ford Division Phoenix district sales manager, describes features of the special F-150 "Wrangler" full-size pickup to salesmen at Ralph Thomas Ford, Scottsdale, Ariz. The vehicle is one of approximately 1,000 special-edition "Wrangler" Ranger, Bronco II and F-Series trucks built with special features for district Ford dealers in Arizona, New Mexico and Western Texas.

truck industry news

First-half registrations top '78 total by 5 percent

6-month tallies hit peak

Six-month registrations of new trucks of all types in the U. S. were the highest on record, with increases in each of the eight weight classifications.

R. L. Polk & Co. reported 1,960,557 new trucks were registered in the January-June period, an increase of 43.6 percent over last year's 1,365,041 units and 5 percent higher than the previous high of 1,866,659 posted in 1978.

June registrations also hit a new high of 363,152 units, up 32.1 percent from the year-ago 274,989 and 1.8 percent greater than the 356,635 tallied in the same month in 1978, the previous mark.

The light-truck total for the first half was up 43.6 percent to 1,849,594 units, compared with 1,287,867 in the like period last year. These vehicles accounted for 94.3 percent of the industry six-month count.

Heavy trucks, Groups 7 and 8, totaled 88,566 through June, an increase of 52.4 percent over the year-ago 58,099 units. The first-half count, however, was 17 percent below the alltime high of 106,679 tallies established in 1979.

Six-month registrations of medium trucks were 17.4 percent higher than a year ago — 22,397 versus 19,075—and there were significant improvements in Groups 4 and 5.

• There have been a number of notable changes in registration trends in the last six years.

Light-truck tallies in the first half this year were almost 150,000 units higher than 1978, reflecting increases in sales of both domestic and imported compact trucks. The 1978 total was 1,702,829 units.

Medium-truck registrations have declined more than two-thirds below the 1978 levels, with drastic reductions in Groups 4 and 6. Six years ago,

Table on Page 34.

73,966 units were registered, compared with this year's 22,397.

There have been dramatic shifts, too, in group registrations. Group 1 is twice the size that it was in 1978, Groups 2, 4 and 6 are much smaller, and Group 7 has almost doubled because of the growth in mid-range diesel power.

In the first half, there were 1,047,821 registrations in Group 1, a gain of 46.2 percent over last year's 716,615 units. Six years ago, there were only 520,063 Group 1 tallies.

The Group 2 count through June was 781,714, up 38.3 percent over last year's 565,417. In 1978, however, there were a record 1,162,851 registrations in this group in the first half.

In Group 3, there were 20,050 registrations through June, an increase of 243.6 percent over the year-ago 5,835. The count was slightly higher than the 19,915 tallied in the like period six years ago.

The Group 4 count this year was 329 units, up 120.8 percent from last year's 149, but far below the 6,702 units tallied in the first half of 1978.

Group 5 totals through June were 1,097, an increase of 306.3 percent over the year-earlier 270 units. In the first half of 1978, there were 1,474 Group 5 tallies.

In the first six months of 1984, the Group 6 total was 20,971 units, a gain of 12.4 percent over the year ago 18,656. The total, however, was less than two-thirds the 65,790 units registered in the same period six years ago.

Group 7 tallies hit a record 30,196 in the first half, a gain of 30.4 percent over last year's 23,149 units. Six years ago, there were only 17,756 registrations in this group.

In Group 8, the total through June was 58,370, up 67 percent

Axle-ratio swap extended by Eaton to May next year

GALESBURG, Mich. — Eaton Corp.'s Axle & Brake Division has extended its axle-ratio exchange program to May 31, 1985. It is designed to help truck dealers convert stock vehicles to the desired axle ratio.

When it was introduced in 1981 as the axle-ratio flexibility program, the division said it was a first for the trucking industry.

The program covers gear-set exchanges for any stock vehicle that has been licensed or sees service, and is equipped with a DS341, DS381, DS381-P, DS401-P or DS460-P axle.

To order a ratio exchange, the division said, dealers in the U. S. must contact the Eaton National Parts Center in Henderson, Ky., (502) 827-2511. Canadian dealers should contact Eaton Yale, Ltd., Malton, Ont. (416) 678-2497, or Calgary, Alta., (403) 276-1192.

The only information required from the dealer, the division said, is the truck make and model, existing axle model and axle ratio and the new axle ratio desired.

The new gear set, all parts and materials to complete the conversion will be shipped directly to the dealer. When the dealer returns the exchanged gear set and other parts, the division will issue a credit for the previously ordered gear set.

Total of 1,960,557 tops 1978 standard

6-month truck registrations hit peak

Continued from Page 18

from the year-ago 34,950 units, but far below the 73,756 tallies in the first half of 1978 and the alltime high of 83,631 vehicles registered through June in 1979.

• Ford was No. 1 in registrations in the first half with 570,845 units, which represented 29.12 percent of the industry total. Its share, however, was down 2.66 percentage points from last year, when it took 31.78 percent of the market with 433,863 tallies.

Runnerup Chevrolet accounted for 27.79 percent of the six-month total with 544,843 units, but it also lost market share. A year ago, it took 30.59 percent with 417,579 units, a loss of 2.80 points.

Dodge and Plymouth scored the biggest gains in penetration in the first half as a result of the heavy response to the new Chrysler minivans.

Through June, Dodge had 204,730 registrations representing 10.44 percent of the total. Its penetration was up 1.37 points from last year, when it had 9.07 percent with 123,765 tallies.

Plymouth registrations through June totaled 39,391 units good for 2.01 percent of the total. The count was 1.66 points higher than last year's 0.35 percent with only 4,768 tallies.

Introduction of the downsized Jeep Cherokee and Wagoneer boosted the Jeep penetration by 1.06 points. This year, there were 68,512 Jeep tallies representing 3.50 percent of the total. A year ago, Jeep took 2.44 percent with 33,230 registrations.

outlets, there are now 67 PacLease facilities providing service throughout the U.S. and Canada, the firm said.

Each PacLease franchise is locally owned and operated, and is equipped with a complete factory service facility and parts inventory. PACCAR Leasing headquarters in Bellevue, co-ordinates procedures and policies for the franchises.

Affiliated with PACCAR, Inc., PACCAR Leasing specializes in the leasing and rental of Kenworth and Peterbilt heavy trucks. Trailers, smaller trucks and driver leasing also are available through PacLease franchises.

U. C. dealer penalized in rollback case

HARRISBURG, Pa.—Edward D. Hobbs, a used-car dealer in Schuylkill County who was accused of rolling back odometers, will close his business for at least two years and pay $14,500 in penalties and refunds, according to the state attorney general's office here.

In an "assurance of voluntary compliance" document filed in Commonwealth Court here, Hobbs admitted no wrongdoing. However, he agreed to pay a $10,000 civil penalty and refund a total of $4,500 to three customers who bought cars with allegedly rolled-back odometers, the attorney general's office said.

Think of
Snap-on as money
in the bank.
As demand on your service department rises, shop proficiency must rise. Anything short of top performance is simply not acceptable. That's true for your service professionals. And, it's true for the tools they use. There's no better way to maximize the return on your investment. In facilities and equipment. In your service technicians and the tools they need to stay on schedule.
Snap-on's reputation is based on that kind of performance. Toughness, precision and availability mean dependability. The right tool for each job. In hand, when it's needed.
Just as you do, we believe in service. Quick response for quick shop turnaround. That's why Snap-on fields the largest dealer network in the industry. With dealers whose expertise lets them get in, solve your tool-related problems, then get out without wasting valuable production time.
Snap-on also maintains 53 branch offices, strategically located service centers and regional repair facilities. Factory back-up when you need it. For service and reliability that make a difference.
When you think of tools, think of Snap-on tools. They're like money in the bank.

Insurance execs do favor some kind of passive restraint

Survey shows faint air-bag support

By Alison Kittrell
Crain News Service

Most insurance risk managers favor some kind of passive-restraint system to protect motor vehicle drivers and passengers, but the majority think mandatory air bags are a lot of hot air, according to a survey conducted by a sister publication of AUTOMOTIVE NEWS.

Of the 45 risk managers responding to a survey by a *Business Insurance* Risk Management Board, only 16, or 35.6 percent, thought that auto makers should be required to equip new cars with air bags.

Twenty-eight, or 62.2 percent, disagreed with the idea of mandatory air bags and one did not answer.

A recent Transportation Department regulation may require air bags, automatic seat belts or safer interiors in all new cars. The regulation would be phased in beginning in 1987. However, the regulation would be eliminated if states representing two-thirds of the population enforced mandatory seat belt use laws by April, 1989.

To get the risk manager's view of this controversy, *Business Insurance* surveyed its Risk Management Board, a group of 71 risk managers who have volunteered to respond to periodic surveys on risk management issues.

Although only a minority of the respondents supported the mandatory installation of air bags, a slightly higher percentage felt that the additional cost of air bags could be justified by lives saved, reduced medical expenses and lowered insurance costs.

• Nineteen, or 42.2 percent, said the advantages would justify the cost; 22, or 48.9 percent said the cost of air bags would not be offset by the advantages, and four, or 8.9 percent, had no opinion.

However, a majority of the risk managers said they favored the installation of automatic seat belts, which swing into place when the car door is closed, to meet the regulation. And, safer car interiors, including better-padded dashboards and a body structure designed to better absorb the shock of a crash, also found favor with a majority of the respondents.

Although a majority of respondents disagreed that the passage of mandatory seat-belt-use laws would be an effective substitute for passive restraints, most of the risk managers support the passage of such laws, without regard to the mandatory air bag regulation.

Reflecting their skepticism about air bags, the majority of risk managers said that when purchasing a car for their company fleet or for their personal use, they would choose a less-expensive car without an air bag over a more-expensive car with the device.

Whether a respondent favored requiring air bags in automobiles seemed to depend on whether he felt that air bags would be effective in protecting drivers and passengers from death or injury.

Typical of the position of those who favored mandatory air bags was the comment of the risk manager who said air bags "save lives, reduce injuries, save workers compensation and medical costs."

However, many respondents remained skeptical about whether air bags would function effectively.

The risk manager for a manufacturing firm said, "It has yet to be demonstrated that (air bags) are more effective than seat belts or that they can provide protection from other than head-on crashes . . . Seat belts protect from all sides."

Other risk managers feared that air bags would cause more dangers than they would guard against.

Still others feared that the air bags would inflate prematurely or not at all, or that they would interfere with a driver's ability to maneuver the vehicle once they inflated.

Some respondents said that air bags would be too expensive.

The final argument made against air bags by some of the respondents was that requiring them in new cars was an unwarranted intrusion on the part of the government.

• Substantially more risk managers preferred automatic seat belts to air bags. Some 29, or 64.5 percent of the respondents, said automakers should be able to substitute automatic seat belts for air bags to meet the safety regulation. Fourteen, or 31.1 percent, said they should not be able to substitute automatic seat belts, and two, or 4.4 percent, did not answer.

Most of the respondents who advocated automatic seat belts said they felt the belts would be cheaper and more effective than air bags.

The majority of risk managers also liked the idea of safer car interiors. Thirty, or 66.7 percent of the respondents, said these safer interiors should be permitted as an alternative to air bags, 13, or 28.9 percent, disapproved of the substitution; and two, or 4.4 percent, did not answer.

Several risk managers said air bags, automatic seat belts and safer interiors should all be required for maximum safety.

Some risk managers suggested that tougher vehicle inspection and drunken driving laws or stricter enforcement of speed limits would be equally or more effective in reducing accidents as any of the other alternatives.

Dodge Daytona enshrined

The Dodge Daytona Turbo Z that may be the last car to set NASCAR speed records on the sands of Daytona Beach, was enshrined in the International Motorsports Hall of Fame, Talladega, Ala., alongside a record-setting winged Daytona of another era. Doing the honors are J. S. Hannan Jr., right, Chrysler Corp.'s Memphis zone manager, and Don Naman, acting director of the hall. Joe Varde drove the Turbo Z 133 MPH on the beach. A winged Daytona of the '60s with Buddy Baker at the wheel was the first car to break 200 MPH on a closed course.

Royalty visits Goodyear

The Duke of Kent donned a crash helmet and did a few laps around the Goodyear test track during a recent visit to the company's headquarters in Akron. The Duke visited Akron, Cleveland, New York and Chicago in his official capacity as vice chairman of the British Overseas Trade Board.

569,539 cars assembled

August output 6 pct. ahead of '83

Domestic auto production in August is estimated at 569,539 units, the most for that month in the 20 years for which records are readily available.

The total was 6.17 percent above the 536,421 cars built in the corresponding month of 1983.

The return of three General Motors plants last week and daily overtime at all the Chrysler Corp. points weren't enough to offset downtime at the American Motors Kenosha and GM Detroit facilities.

Last week's output was estimated at 134,355 units, down 1.90 percent from the previous week's 136,959, and down 4.34 percent from 140,445 built in the same period last year.

Model changeover continued last week at GM's Baltimore and Norwood facilities. Baltimore, idle since March 30, is slated to return Sept. 10 but will build Chevrolet minivans, not cars. Norwood, down since Aug. 24, is expected back Sept. 24.

Back last week from changeover at GM were the Doraville, Lansing and Lordstown assembly points.

All car facilities were idle today (Sept. 3) in observance of Labor Day.

Iacocca emphasizes quality in new Chrysler ad campaign

Chrysler Corp. will begin a new corporate advertising campaign Wednesday (Sept. 5) emphasizing its quality efforts.

"We have one and only one ambition. To be the best. What else is there?" declares familiar spokesman Chairman Lee Iacocca. Ads appear in print and on TV.

In one phase of the campaign, quality is discussed in two TV commercials and in a four-page color gatefold in the five major news weeklies. Print runs Sept. 17.

In another phase, the restyled '85 Aries and Reliant are introduced with a 60-second commercial, a two-page Sunday supplement newspaper spread and a three-page news weekly ad.

One corporate ad features Iacocca in an assembly plant and in a design studio, rebuffing the notion that "Americans can't cut the mustard anymore," and stating his and Chrysler's quality ambitions.

The four-page gatefold also features Iacocca under the headline, "You won't settle for anything less than the best cars, best protection, best service. Neither will we."

Copy details Chrysler technology, high-mileage turbo engines, extended warranty and other points.

Corporate commercials debut Sept. 5 and run through Oct. 6. There are 90 and 60-second versions, the 90-second version running 15 times and the 60-second five times on network TV.

The K-car commercial opens in an assembly-line setting, with Iacocca saying, "If it weren't for the great success story in the '80s, I wouldn't be here today," nor others who he points out worked on these cars.

He calls the '85 K-car versions "quieter and more efficient" and the "best (made) better."

Print picks up the same theme and details the new K-cars' aerodynamics, value, improved engines, mileage, low price, recall and warranty records.

The 60-second commercial runs 20 times between Sept. 13 and Oct. 1 on various network shows.

Supplements appear in Sunday, Parade and Family Weekly Sept. 16.

Three-page units appear in news weeklies Sept. 24.

Kenyon & Eckhardt handles corporate ads.

25 for Sommer

MEQUON, Wis. — Walter G. Sommer, of Sommer's, Inc., here, has received a plaque in honor of his 25 years as a Pontiac dealer.

Canadian makers build 17,539 cars, up 4 pct. for week

Canadian auto production rose last week due to the gradual increase of 1985 models at General Motors' Oshawa facilities. The GM gain in output more than offset inventory-adjustment downtime at American Motors' Brampton plant.

The auto makers targeted 17,539 units last week, up 4.45 percent from the previous week's 16,792, and up 7.18 percent from 16,364 cars completed in the comparable 1983 period.

Truck assembly fell 9.70 percents last week to 14,735 units as normal five-day operations resumed at Chrysler Corp.'s Windsor plant. There were 16,318 trucks completed in Canada the previous week as Saturday overtime was scheduled at the Chrysler facility. In the corresponding week last year, 11,585 trucks were built.

So far this year, the car manufacturers have finished 725,045 units, an 11.67 percent gain over last year's 649,251. Truck output for the year-to-date is up 55.38 percent to 537,814 units from 346,129 built in the comparable 1983 period.

No overtime; truck production dips for week

Truck production in the U. S. dropped slightly last week as no Saturday overtime was scheduled because of the Labor Day holiday.

The makers slated 56,060 units, down 4.66 percent from the previous week's 58,800.

The previous week's total included Saturday work at General Motors' Detroit, Janesville and Pontiac points, Chrysler Corp.'s Warren plant and Ford Motor's Lorain facility.

Last week's output was 20.67 percent above the 46,457 trucks assembled in the corresponding week in 1983.

So far this year, the makers have built 2,093,470 trucks, up 39.42 percent from 1,501,543 units finished in the comparable 1983 period.

All facilities are idle today (Sept. 3) in observance of Labor Day.

Chrysler's St. Louis plant sets record for model run

ST. LOUIS.—Chrysler Corp.'s Assembly Plant No. 1 here has broken an 18-year-old production record for a model year, the auto maker announced.

The Fenton plant turned out 242,501 cars during the 1984 model year. The previous high was 220,269 cars in the 1966 model year.

The plant produces Chrysler Laser and LeBaron; Dodge Daytona, 600 and Aries, and Plymouth Reliant.

60th year—$40 per year, $1.00 per copy

New from Ford . . .

Crown Victoria heads lineup

Top model in the Ford Division lineup for 1985 is the full-sized Crown Victoria. An Ignition Diagnostics Monitor has been added to the Electronic Engine Control, and gas-filled shock absorbers are used. Story, other pictures are on Page 60.

. . . from Mercury . . .

Cougar—'85 edition

The '85 Mercury Cougar has new grille, wheel and taillight treatments. The instrument panel has been redesigned, and Cougar has side-window defoggers. A 60-40 split bench seat with consolette is standard, replacing individual seats with console. Story, other pictures are on Page 46.

. . . and from Ford of Europe

Lugano to replace Granada

At the end of this year, Ford of Europe will replace its Granada with the Ford Lugano. Instead of the traditional notchback, the new Lugano has a rather short deck with a wide rear door, similar to the Ford Sierra. The rear window is vaulted all around the roof posts and the styling seems to be aimed directly at the Audi 100.

No cleanup blues for '84; some models are sold out

By Richard Johnson
Detroit Reporter

Dealers across the U. S. are reporting a smooth transition into the new model year, with limited 1984 carryovers and plenty of customers to sop up excess stock.

Continuing strong sales throughout the country are keeping most inventories lean, which in turn raises concerns among Ford and General Motors franchise-holders about the effect of a UAW strike.

Dealers have sold out of several models. Some carryovers may occur because individual retailers have sought to fatten inventories by purchasing aggressively within the dealer network.

"We're closing out real well," said Jerry Davidson, president and general manager of Century Chrysler-Plymouth, San Jose, Calif. "We have a few carryovers, but nothing we can't handle."

Profit margins have dropped at some outlets as dealers attempt to clean up stocks of '84s, and less popular and less profitable small cars make up a larger proportion of inventories late in the model year.

Meanwhile, dealers are still waiting for a better mix of tradeins. Worn-out, high-mileage cars are dominant, but some retailers report a growing number of late-model trades, suggesting that the new-car sales boom is responding to more than just pent-up demand.

• Joe Breslin, general manager at Wallace Buick-AMC/Jeep/Renault in Portland said he may carry over a few Centurys and Skyhawks, but only because they are strong sellers and he is trying to maintain an ample inventory.

"We'll have carryovers, but fewer than we are used to having," he said. "We have no problem cars, and we're sold out of Riviera and Electra."

Although he reported a slight sales drop-off in August, Breslin said inventories are such that a UAW strike will quickly produce a shortage.

However, things are less rosy on the AMC side of his business. He expects to carry over "a bunch" of Renault Alliance and Encore models.

"We have more product than we need," he said. "Alliance and Encore have been real slow. We've been offering them at invoice for the last month and they're still not moving. I don't

Shock waves missing as makers price '85s

By John K. Teahen, Jr.
Managing Editor

Price season has happened for the 1985 domestic cars, and it hardly caused a ripple in the automotive world.

The reason: The '85 increases are moderate and probably will be accepted as such by new-car shoppers.

The boosts aren't like the heart-stopping bumps that the auto makers applied to their new cars just a few years ago. Those hikes produced an affliction known as "sticker shock" and helped dry up traffic in the nation's showrooms during the recession.

Ford Motor Co. wound up the Big Three pricing activities last week with a tentative boost averaging $225 or 1.9 percent.

Earlier, General Motors had posted an increase of $292, or 2.3 percent, and Chrysler Corp. had said its '85 cars would go up an average of $181, or 1.7 percent over the final '84 stickers. Chrysler's schedule, like Ford's, is tentative.

At American Motors, the tentative boost is 4.1 percent on Eagle and Jeep and 2.3 percent on Alliance and Encore. Last week, AMC said its new Alliance convertible will be priced at $10,295.

The Ford and GM increases were announced during contract negotiations with the UAW. It remains to be seen whether there will be additional boosts after the new pacts are reached.

• Chrysler hiked destination charges an average of $12 per car. GM and Ford did not boost those fees.

There was no change in dealer discounts for '85 on GM and Chrysler cars, but Ford cut out the dealer margin by one percentage point on seven lines of small cars.

The discount now is 14 percent, down from 15 percent, on the subcompact Escort, EXP and Lynx and the compact Tempo, Topaz, Mustang and Capri. Those cars account for about 47 percent of Ford Motor Co.'s car sales.

Automotive News estimates that if the dealer discount had not been changed, Ford Motor's '85 price hike would have been about $18 higher than the announced $225.

GM's average boost of $292 is

Ford dickers with Koreans

By Dan McCosh
Detroit Reporter

Ford Motor Co. has been quietly negotiating with Korea's Kia Motor Co. to supply components and is exploring the possibility of small-car assembly in that country, Automotive News has learned.

General Motors previously announced plans to import into the U. S. annually about 80,000 cars built by its Korean affiliate, Daewoo Motor Co., beginning in 1986, and Chrysler has been negotiating with Korea's Samsung Group to build a new assembly plant in that country.

Ford's activities so far in Southeast Asia have concentrated mainly on its relationship with Mazda Motors, Ltd., and auto assembly in the Republic of China (Taiwan), where it recently announced a major expansion.

Kia assembles vehicles under license to Mazda and has close ties to that company, which is 25 percent owned by Ford.

The negotiations with Kia are

The UAW chose General Motors as its single target company last week, and both sides are optimistic a settlement can be reached without a walkout.

"We've done a lot of work and I think we can do it," said Owen Bieber, UAW President.

Alfred S. Warren Jr., GM Industrial Relations vice president, said he is "very, very confident" a settlement can be reached and the "frame of mind on both sides is correct." The contract covering 350,000 GM workers expires on Friday (Sept. 14).

But Warren said the new contract must allow GM to be competitive in the world market.

"The point that must be uppermost in everyone's mind is that this contract must be competitive," Warren said. "We have to repeat time and time again that unless it is competitive, we have done a disservice to our industry, our country and certainly to the employes that are involved."

Auto analysts are not as optimistic. Most are predicting a strike lasting from one to four weeks at a cost of $250 million a week in lost production.

A national strike would not only hurt GM but would shutdown Chrysler in about four weeks, a company source said. Chrysler buys numerous parts from GM and although it is stockpiling some parts, a lengthy strike could be disastrous.

While most analysts have said a national strike will be called, some have indicated that selective strikes could be the order. In selective strikes, the union shuts down integral plants which in turn would severely damage the rest of the production schedule or cause it to halt completely.

• One analyst said a full-scale strike could hurt the union since it "is the weaker of the two parties. A national walkout makes it weaker."

While the UAW has a record strike fund of $563 million, it provides workers with only $85 a week plus payment of life and health insurance premiums. That is little incentive to strike for workers recently recalled after a long layoff, said another analyst.

According to John Hammond, auto analyst for Data Resources, Inc., if there is a strike at GM, it will last about three weeks and GM will lose 50,000 to 60,000 car sales. Most of those buyers will be in the big-car market and will buy from Ford instead of Chrysler which has few offerings in that segment, he said. The imports will get very little of that share.

Until last week, Ford and GM were twin targets. Peter J. Pestillo, Ford labor relations vice president, said he is disappointed Ford was not chosen as the target.

"We would have loved to have been first," he said. ". . . we think we can do our own deals better."

One of the major questions in this bargaining session is whether pattern bargaining will continue. Pattern bargaining is making an agreement with the target company and then requiring the other company to accept it. Both Pestillo and Warren have been warning that the pattern may not be accepted.

Pestillo said he does not think pattern bargaining will be automatic at Ford once a settlement is reached at GM. "Each company has special problems. I don't have a blank check to offer the union," he said.

"What they do will bear on what we do but will not control

Renault ragtop

Alliance convertibles for AMC

The 1985 Renault Alliance DL (top) and Renault Alliance L convertibles represent American Motors' first ragtop offerings in 17 years. Public introduction is set for Oct. 1. Story and more pictures on Page 44.

VW to introduce 4WD Vanagon in Europe in '85

By Roger Rowand
Engineering Editor

WOLFSBURG, West Germany.—In the second half of next year, Volkswagenwerk is expected to introduce in Europe a four-wheel-drive version of its Vanagon which VW calls the Type II here.

The vehicle will have two major distinguishing characteristics, VW engineers said. They are comfort and the application of an unusual hydraulic 4WD setup.

"Our competitors' vehicles are quite uncomfortable on and off the road. Our four-by-four will be as comfortable as our two-wheel-drive Type II," a VW engineer said.

Comfort, he said, will be the product of such changes as increased spring travel, an unusual front-axle design and special attention being given to tires, springs and wheels.

The vehicle has no transfer case as most other 4WD units have hanging beneath them. Shift to four-wheel-drive is accomplished by means of two strong rails going from the rear to the front to a British-developed hydraulic coupling.

During normal travel, about 2 percent of the vehicle's power is transferred, or leaks, to the front wheels from the rear through the coupling.

With rear-wheel slippage, the speed of those wheels is higher than that of the front wheels and more of the power is shifted to the front-wheel driveshafts by way of the coupling until there is a 50-50 split of the available power, the engineer said.

It is called the Ferguson system and is similar to one used by American Motors in some Jeeps. Another similar arrangement was available as an option in the early 1970s on British-made Jensen sports cars.

Volume is 115 pct. of year earlier total

Service Index shows robust gain

By Francis J. Gawronski
Service Editor

Service and parts volume recorded by new-car dealerships rebounded in July after a decline in the growth rate the previous month, according to the Automotive News Service Index.

Shop business in July amounted to 115.1 percent of the business done in the same month a year ago. The increase in business over the same month the year before was 9.2 percent in June.

July marked the 17th consecutive month in which parts and service volume in new-car dealerships has shown an increase over the comparable year-earlier figure.

All five indicators used in the Service Index posted healthy advances in July, with shop parts sales (those used in both customer-paid and warranty jobs) recording the highest increase, 20.9 percent, over the year-earlier volume.

Gross profit on all labor, parts and accessory sales — the most important indicator from the dealer's viewpoint — was up 16.6 percent in July, with sales of parts and accessories showing a gain of 16.0 percent for the month.

Total labor sales (customer-paid and warranty) registered a gain of 15.8 percent over last year's total, while repair orders written jumped 10.4 percent above last year's numbers.

Figures used in the Service Index are averages compiled from reports on shop operations from a cross-section of the nation's new-car dealerships.

All five also showed strength during the first seven months of the year.

Shop parts sales topped the indicators with a gain of 24.6 percent, followed by sales of all parts and accessories, up 19.6 percent, and gross profit, up 18.7 percent.

Labor sales were up 15.7 percent for the period, while repair orders advanced 8.3 percent for the January-July period.

SERVICE INDEX
115.1*

	July, '84 vs. July, '83	7 mos., '84 vs. 7 mos., '83
Gross Profit on All Labor and P&A Sales	+16.6%	+18.7%
Repair Orders Written	+10.4%	+ 8.3%
Total Labor Sales (Customer & Warranty)	+15.8%	+15.7%
Shop Parts Sales (Customer & Warranty)	+20.9%	+24.6%
Sales of All Parts and P&A	+16.0%	+19.6%

*—Survey by Automotive News shows that dealers' service and parts business in July, 1984, was 115.1 percent of business in July, 1983. Service business in the seven months of 1984 was 117.1 percent of business in the corresponding period in 1983.

New marketing approaches to be emphasized

Ford to expand 'satellites' in 1985

By Richard Johnson
Detroit Reporter

Ford Motor Co. officials last week said they will emphasize a series of new marketing approaches during the 1985 model year, including expanded use of satellite dealerships to penetrate geographic areas which cannot support full-line retailers.

The marketing plans, which also include product simplification, regionalized marketing, demographic targeting and use of computerized selection centers, were cited last week during a preview of Ford's 1985 model lineup.

Louis Lataif, Ford Division general manager, said the division has 88 satellite dealerships around the country, including five mall outlets operating in shopping centers. The satellites are separate dealer points owned entirely by nearby dealerships.

"We're learning new ways to go where the public is instead of forcing them to come where we are doing business," he said.

Lataif said the division hopes to increase the number of satellite operations to 100 by the end of the calendar year. But he said the company is still exploring the concept to determine the best formula.

Some satellites are strictly service operations, while others are exclusively sales or rental offices displaying products. Some outlets emphasize service, while others provide minimal servicing, according to Lataif.

"We're still learning which ones will work, because they won't all work," he said. "Some will turn out as a class not to be a good idea. But it is a way for us to go back into the market areas which can't support full-time dealerships any longer and not cut the pie up into smaller pieces among more dealers."

Lataif said the satellites and mall stores are designed to expose customers to hardware they wouldn't ordinarily see.

"Down in the Tampa Bay (Fla.) mall, for example, 25,000 customers per day stroll through the place," he said. "Many of them are now looking at Fords they wouldn't otherwise see. They wouldn't necessarily be Ford buyers. So it generates a lot of sales outside the mall."

According to Philip Benton, Ford Motor vice-president for sales operations, product simplification is intended to reduce buyer confusion by limiting the number of option combinations. In turn, the simplified product offerings will make for cost efficiencies in the manufacturing process, he said.

Benton said virtually all cars and trucks in the Ford line will be merchandised in this manner by 1987. Lincoln-Mercury launched its simplified "complete car strategy" in five Western states last year and will extend the concept across all car lines in 1985.

For example, Mercury Topaz will be available in just two series in 1985, with each series equipped with options most often ordered by customers.

"This strategy permits cus-

Mercury Merkur priced at $16,361

Lincoln-Mercury last week placed a $16,361 price tag on the Merkur XR4Ti, a sports sedan designed and engineered by Ford of Germany that will be sold by L-M in the U. S. beginning this fall.

The price puts the two-door, five-passenger Merkur about $1,000 under a comparably equipped BMW 318i, according to L-M General Manager Robert Rewey. The division is planning on sales of about 20,000 XR4Ti models during the '85 model year.

Honda's 2nd sales net called Acura in U. S.

LOS ANGELES. — American Honda's second U. S. distribution channel in the U. S. has been named Acura, the company announced last week.

Acura will sell a line of upscale sedans and sports cars.

The new name is a coined word selected by the U. S. unit of Honda with help from outside consultants.

Ed Taylor, formerly senior manager of auto distribution at American Honda, will head the new division. Plans call for a separate divisional identity, including company colors which have yet to be selected.

The first dealers are expected to be named before the end of the year. Acura is projected to have about 120 dealers.

BMW, GE Credit form financing leasing ventures

MONTVALE, N.J.—BMW of North America and General Electric Credit Corp. have entered into a $400 million joint venture to offer a full range of retail and lease financing to BMW's automobile and motorcycle dealers.

GECC had provided third-party leasing and inventory financing to BMW dealers through a BMW-endorsed financial services program. The joint venture leaves the GECC floorplanning service intact, but places leasing under a newly formed leasing subsidiary, BMW Leasing Corp.

BMW Credit Corp., headquartered in Barrington, Ill., with GE Credit Auto Lease, Inc., will be 51 percent owned by BMW-NA and 49 percent by GECC. BMW Leasing, also in Barrington, will be owned by BMW. GECC will provide administrative and financial management services for both.

Initial funding will come through equity contributions by GECC and BMWNA; subsequent funds will be raised by issuance of commercial paper and medium-term debt.

Operations are scheduled to begin Nov. 1 in Illinois and Ohio. A nationwide rollout of the program will take place over six to nine months.

Parayre resigns as Peugeot chief; Calvet steps up

PARIS. — Peugeot S.A. president Jean-Paul Parayre has resigned. New president is Jacques Calvet, president of Peugeot's two automotive units, Citroen and Peugeot-Talbot.

Calvet will remain the head of Citroen, but Jean Boillot has assumed temporary responsibility for Peugeot-Talbot, and he is expected to be named president of the group at the directors' meeting Sept. 24. Boillot's title has been Automobiles Peugeot executive vice president, in charge of Peugeot and Talbot.

A statement issued by Peugeot said Parayre, 49, resigned for organizational reasons. He joined Peugeot in 1974, shortly after the company acquired Citroen. He was made president in 1977. The following year, Peugeot purchased Chrysler-Europe (Talbot), making Peugeot Europe's largest volume maker.

Calvet, former chairman of Banque Nationale de Paris, had Automobiles Citroen added to his responsibilities late last year. He headed Automobiles Peugeot since 1982.

Buick import fighter

Somerset Regal debuts

Taking aim at the smaller, sporty-yet-luxurious imports, the new Somerset Regal from Buick is available its first model year in two-door models, Coupe and Limited. A new version of the 2.5-liter transverse-mounted four with throttle body fuel injection and manual five-speed transmission are standard. Story, other pictures on Page 32.

Judge clears way for bankruptcy proceedings

DeLorean's legal saga continues

By Michelle Krebs and Edward Lapham

The seemingly endless saga of John Z. DeLorean's legal woes reopened in U.S. Bankruptcy Court in Detroit. Judge Ray Reynolds Graves granted a motion from trustee of the bankrupt DeLorean Motor Co. to vacate the March 6 stay, which held bankruptcy proceedings in abeyance during DeLorean's West Coast drug trial.

DeLorean was acquitted of all charges in the drug case.

On another front here, a federal grand jury, which has been investigating DMC financial irregularities for more than a year, seemed close to ending its work. Sources close to the investigation, and DeLorean's own attorneys, said the grand jury could decide before Oct. 1 whether to issue indictments.

Attorneys for DeLorean argued that bankruptcy proceedings should remain on hold until the grand jury concludes its investigation. They said DeLorean's protection against self-incrimination provided under the Fifth Amendment would be jeopardized if bankruptcy proceedings were allowed to continue.

"If he pleads the Fifth to the grand jury, he can't defend himself here," argued Donald Re, one of the attorneys who also represented DeLorean in the drug case. "And if he talks in this case, he runs the risk of incriminating himself at the grand jury."

Nevertheless, Judge Graves ruled bankruptcy proceedings should move forward now that DeLorean has been acquitted of drug charges.

Also during the hearing, Robert Weiss, attorney for DMC trustee David Ailard, tried to take testimony on what he called "disturbing new evidence" that allegedly showed DeLorean was diverting funds from the estate.

One check for $200,000 was made out to DeLorean while a second was made out to DeLorean and his wife, Cristina Ferrare. A third check for $830,000 was made payable to Bernard Minsky, DeLorean's first attorney in the drug case.

Judge Graves cut short further testimony from Levin, ruling the defense team hadn't been adequately alerted to the nature of his testimony.

Following the hearing, Weiss refused further to discuss details regarding the checks. He said the issue would come up again in court.

DeLorean's attorneys said they did not know if they would appeal Graves' decision.

"I'm not doing anything else until I know I'm going to get paid," said attorney Howard Weitzman.

DeLorean had turned over his Pauma Valley ranch in San Diego County to Weitzman in lieu of legal fees in the drug case. The creditors committee, however, has sued Weitzman over the transaction, and the case will be heard in California next month.

• Meanwhile, the federal grand jury and task force of federal agents investigating DMC finally began calling witnesses after more than a year of reviewing thousands of documents subpenaed from former DMC officials, attorneys and company files.

Some observers familiar with the DeLorean matter have criticized the pace of the grand jury investigation, which seemed to drag along in 1983 when it appeared the government had a good drug case against DeLorean. Earlier this year, however, a new assistant U.S. attorney was named to head the task force and the pace has accelerated.

Sources familiar with the investigation said the main thrusts of the probe are criminal tax fraud and bankruptcy. One area of key interest was the 1978 disappearance of $17.65 million in car project funds which vanished into a European bank maze.

The creditors committee believes DeLorean eventually used at least a portion of the allegedly misappropriated funds to acquire a snow-grooming equipment company in Logan, Utah.

Investigators also believe there may have been bankruptcy fraud involved in a 1983 attempt to reorganize the defunct car company.

AUTOMOTIVE NEWS sources last week said the grand jury investigation could culminate in a number of indictments for criminal tax fraud, bankruptcy fraud and a host of other related charges. Likely targets of any indictments are said to include DeLorean, former DMC officials, attorneys and even a few foreign business people.

• It has been nearly two years since bankruptcy proceedings began.

DMC filed for Chapter 11 bankruptcy status on Oct. 25, 1982, just one week after John DeLorean was arrested in Los Angeles. The proceedings began before Bankruptcy Judge George Woods and immediately developed a complicated, vitriolic air.

The creditors committee, chaired by New York attorney Malcolm Schade as a representative of various British Government interests which advanced cash to the sports-car project, aggressively tried to maintain and enlarge DMC's estate to pay creditors' claims.

During the proceedings, the creditors committee convinced the court to attach some of DeLorean's personal property pending outcome of adversary proceedings which could prove DeLorean misappropriated company funds for his personal use.

All proceedings, divided between Woods and Graves, were held in abeyance by the March 6 stay because of the criminal case in California but will now proceed. The next scheduled hearing is Sept. 18 when Graves will decide whether DeLorean must turn over additional documents.

Vanagon recalled for door repair

TROY. — Volkswagen of America is recalling about 16,000 1981 and 1982 Vanagons and Campers to replace front-door springs that hold the latches.

VWoA said the locks could open in an accident or if extreme forces are extended against door interiors.

The retaining springs which were not built to specification will be replaced with ones that are to spec, VWoA said. VWoA said it knows of no accidents involving the faulty springs.

Network includes 319 dealers

New Porsche setup kicks off operations

By John A. Russell
New York Staff Writer

NEW YORK. — Porsche Cars North America is officially importing and distributing cars in the U.S. through a network of 319 dealers.

The company took over the operations Sept. 1, and John Cook, president, said the 319 dealers represent 97 percent of the existing Porsche dealers in the U.S.

After a tumultuous start earlier this year, Cook reported, the 100,000-square-foot parts building on a 15-acre site in Reno is complete and ready for parts distribution. He ordered $9 million in parts from the manufacturer, and those parts have been received.

The 13-acre Eastern distribution center at the Charleston (S.C.) airport is under construction but a temporary facility is operational for parts distribution.

As for cars, the new company will process dealers' October and November allocations and cars are expected to arrive under the new banner in mid-September.

The company has hired more than 100 employes including 40 field staff personnel and it anticipates employing 280 persons when the operation is in full swing.

• As for dealers, in late September the company will hold 10 regional dealer meetings to explain new procedures, but the company said that operating manuals, terms and conditions as well as microfiche containing parts pricing information have already been mailed to the dealers.

Customer complaints are being handled out of the new headquarters building in Reno and technical training has started.

In addition, a direct computer link with dealers is being pilot-tested in 11 Western dealerships and the system will be introduced nationwide as soon as testing is completed.

As for litigation, Porsche Cars has settled one lawsuit with World-Wide Volkswagen, an Eastern distributor, and anticipates that litigation with two other independent distributors will be settled shortly. All dealer suits have been dismissed or dropped, according to Cook.

Also, Porsche Cars will introduce the 928 four-valve model in late 1984 or early 1985, he said.

Cook also reported that the overall marketing strategy has been completed and both the advertising agency and the public relations agency are working on specific plans for a fall media kickoff.

Joe Wilssens

New competitor

Morris Tanenbaum, chairman of AT&T Communications, tells the World Congress that Ford Motor Co.'s communications inroads are making it a serious competitor of AT&T.

GM sets sights on sales leadership

Kadett/Astra target is 550,000 sales in Europe next year

By Richard Feast
European Editor

General Motors' introduction during the next few weeks of the new Opel Kadett/Vauxhall Astra looks very much like a $500 million bid to market the best-selling car in Europe. If that happens, Kadett will do something it never has done before — outsell Volkswagen Golf and Ford Escort.

John G. Bagshaw, Adam Opel board member responsible for sales, talks cheerfully of selling 550,000 of the new cars in Europe next year, indicating GM's seriousness. These are dizzy numbers, far ahead of anything GM has done before in Europe with a single model. They also are greater than anything achieved by Golf and Escort which have vied for top spot since arrival in 1981 of the front-drive Ford. No other model currently approaches these volumes (see table), especially since decline of the old Renault 5 model and the more recent slippage by Ford Sierra.

Kadett also must be understood as a further weapon in GM's fight to the top of the European sales leadership chart. Its impressive progress, dating back to the J-car—strengthened by diesels and the Spanish S-car—has brought it into full competition with Europe's other five leading auto makers.

Whatever the progress, though, GM remains behind its great American rival, Ford. Always a competitor, Ford's growth the past few years has been steady rather than spectacular. With strong opposition from Fiat, VW, Renault, Peugeot and Ford groups, senior directors at Opel's Russelsheim headquarters do not identify Ford specifically when they talk of the opposition. "The target is to operate in a profitable manner rather than to beat Ford," says a board member. It does not look that simplistic to an outsider.

Further indication of GM's growing aggression in Europe is the fact that Kadett's product cycle is reduced from six to five years with the new car. By European standards, this is a very short model life. The recently replaced Golf went on for nine years.

While Golf and Escort are GM's prime targets in Europe as a whole, it will meet strong pockets of resistance in some national markets. In France, for instance, Renault 11 is the segment leader but has a lower penetration across the rest of the continent. Similarly, in Italy Fiat Ritmo leads the field. In the UK Austin Maestro easily outsells Astra, while the Escort is the No. 1 seller. Introduction of the locally assembled (Ellesmere Port) Astra is set to change all that. Vauxhall marketing director David Lahti predicts a 50 percent sales improvement for Astra next year to nearly 100,000.

For 1985 Vauxhall talks of overall sales of 330,000 and market share of 19 percent. For 1988 the target is 20 percent. When one realizes that a few years ago Vauxhall was below 10 percent and today it stands at 17.4 percent, it can be seen that a big chunk of GM's improved European standing results from its success in the large UK market.

In addition to UK improvements, the talk at Opel is of substantial gains in Holland (where it is market leader) and Belgium. Bagshaw refers to "quantum jumps" in Italy and France for Kadett. GM still identifies a lack of dealer representation in Mediterranean countries, but as a rule Opel is pursuing a policy of more sales per dealer rather than more dealers.

It seems unlikely the Kadett will improve its standing much on the large West German market. Last year it sold just over 190,000 there to VW's 225,000 Golfs. Escort's total was just over 80,000. With heavy domestic competition between the new VW and Opel rivals, there will be little room for expansion there, and most of Opel's expected increases will be outside of Germany. Over the longer term this may be a solid trend, for Kadett's weakness — if it had one—was that it relied too much on the German market for sales volumes. Sales will be much better balanced with the new generation model throughout Europe, though Germany will remain the No. 1 consumer.

Stimulus of the new Kadett (and Golf) is likely to lead to further expansion of the segment next year at the expense of the one below (Corsa) and above (Ascona). It already accounts for more than 35 percent of all European sales compared with less than 25 percent only six years earlier.

GM has enough capacity to build whatever the salesmen can sell. Twin shifts at Bochum and Antwerp can produce a little over 1,150 a day. When Ellesmere Port goes to two shifts next year it will theoretically be capable of making another 550.

While Bochum and Ellesmere Port are dedicated to the single model, Antwerp has the flexibility to produce both T (Kadett) and J (Ascona). This will be the valve which can be adjusted to market demands.

To what extent this 600,000-plus annual ability to produce Kadett/Astra will be utilized will depend on European new car buyers. GM is going for high-technology advertising, emphasizing the sporty low-drag GSi, in an attempt to move away from Opel's slightly blue-collar image.

Richard E. Durkin, Opel finance director, predicts competitive pricing. "I'd like to be able to improve profit margins on it, but I don't see that happening right now," he says. On a more general note, Durkin recalls that Opel registered losses in 1980-81 and a small profit in 1982. "That trend did show itself in 1983 and the first six months of 1984, but the metalworkers strike threw a wrench in the whole thing," he said, speaking prior to Opel's financial conference Aug. 23. All he would say of the results was, "We're not ashamed of them, but they're not as good as we'd like." □

How the leading three shape up

	1983	1982	1981	1980	1979
VW Golf	447,900	426,800	472,600	422,400	481,500
Ford Escort	438,900	464,300	406,200	223,900	211,700
Opel Kadett*	396,600	405,200	381,500	358,900	292,600
Market segment	3,417,400	3,194,200	3,019,700	2,912,800	2,789,700
Total market	10,355,000	9,988,300	9,726,600	10,029,200	10,518,900

*Includes Vauxhall Astras on UK market. The lower-medium market is the largest in Europe. It has grown steadily the past half decade as these statistics by Adam Opel indicate.

world news briefs

Ford Sierra XR8: Made in South Africa.

South African Sierra

Ford in South Africa will produce 250 high-performance Sierras with 200 HP Ford V-8 engines. Known as the XR8, it has a five-door body shell — unlike the European sporty Sierra. A top speed of 140-MPH is claimed, with acceleration from zero to 60-MPH in less than eight seconds.

Germany's disastrous June

Total vehicle production in June, at the height of the metalworkers strike, was 43,300 compared with 388,100 the same month a year earlier. Stocks depleted during the month by 120,000, were far from adequate to compensate for production losses, reports VDA, the nation's manufacturers' association.

Japan moves into Ireland

Relaxation on import restrictions next year in the Republic of Ireland has led Honda and Mitsubishi to announce plans to sell vehicles there.

GKN expands in the U.S.

British engineering group GKN bid $32.6 million for control of component maker Beck/Arnley of New York. GKN bought Parts Industries Corp. in 1979, and sales have almost tripled since then.

Return of Seven

The Caterham Super Seven, based on the 1957 Lotus Seven, will go on sale in the U. S. after a hiatus of 17 years. Caterham Car Sales, Surrey, England, which assumed manufacturing rights in 1973, reached agreement with Super Seven Inc., Palm Beach, Fla., to begin distribution early next year.

Jumping the number

Japan has increased from 300 to 500 the number of vehicles an outside producer can import without going through the country's lengthy certification process. Japan's Ministry of Transport has already conceded that type-approval testing can be completed "in foreign countries whose test results are acceptable."

BMW catching up

BMW has told shareholders it should be able to make up for losses caused by the recent West German metalworkers strike during the second half of this year. Manufacturing continued during the August vacation period.

Military buy 4x4s

Three European countries recently placed orders for new four-wheel-drive vehicles for military use. Belgium will receive 2,500 Volkswagen Iltis from license-holder Bombardier of Montreal; Switzerland is buying 600 Land Rovers to replace its Jeeps; Denmark will buy more than 800 Mercedes-Benz G-wagons.

Change at Vauxhall/Bedford

Edward P. Naegeli, Bedford manufacturing director, has been appointed to the same position at Vauxhall Motors. John E. Quantrill, director of production control at GM's Oldsmobile Div., takes over the Bedford manufacturing job.

Daimler-Benz hires more

Daimler-Benz, West Germany, will increase its 151,000 work force by 4,000 this year. The company says the jobs are permanent, and not just to make up for losses resulting from the industry strike earlier this year.

CVT problems emerge

Reports in Europe suggest the developer of the CVT automatic transmission, van Doorne's Transmissie in Holland, is running into financial difficulty. The problem is said to center on production costs of the unit, which in various forms are due to be used by Fuji, Ford, Fiat and GM.

New Skoda scheduled

An all-new Skoda, designed for the U.S.S.R. by an Italian company and featuring front-drive, will appear in 1987, according to Andre Barcak, export director of the Motokov trade organization. □

Problems plague French

Peugeot, Renault suffer in centennial year

By Richard Feast
European Editor

They are celebrating 100 years of the automobile in France this year with, among other things, an exhibition of historic models in the Grand Palais in Paris. In view of the present parlous state of the country's auto industry, it might have been wiser to wait for the centenary of the year when most others believe the motor car was invented, 1886.

The ill-health of the French industry occurs at a time when most other national industries in Europe are improving. Some far-reaching changes will be necessary in order to return France to the vigor of the late 1970s. Fundamental areas must be addressed including overmanning, falling domestic and export sales, an accumulating debt burden and the need for continuation of a heavy investment program which many analysts think the two principle companies involved cannot afford.

Problems of the Peugeot group (PSA) stem to 1980. The combination of a European sales slump and its then-recent acquisition of Chrysler-Europe led PSA into debt from which it has not yet emerged. Annual deficits are around $350 million. Renault went into the red in 1981 and sees no early return to profits. The combined debt of PSA and Renault, estimated at over $6.5 billion, will be a heavy burden as they push ahead with investments in new models and modern manufacturing systems.

According to a report by the country's official Economic and Social Council, Renault and PSA must find annual investments of $2.2 billion to remain competitive around the world. The Council believes much of that total must come from the French government because of the companies' recent poor financial performances and their importance to the national economy.

Any investment must be accompanied by substantial employment reductions, says Insee, the statistical office. The industry employed around 233,000 people at the end of 1983, and Insee suggests 80,000 will have to be cut by 1988. A similar tack is taken in a leaked report on the state of the French industry by Francois Dalle, an industrialist who heads the L'Oreal cosmetic firm. His commission, due to report this month (September), finds a special need for job cuts at state-owned Renault.

Private enterprise PSA has been the center of controversy over its job-cutting program

since it was revealed in the middle of 1983. But for a company owned by the government and taxpayers, such as Renault, it is ideologically more difficult to reduce the payroll. Industries in Europe, especially Socialist France, find it much more complex to reduce labor costs than American industry appears to. An indication came when PSA's Automobiles Peugeot wanted to make 7,500 job cuts, mainly at its Talbot plant at Poissy. As the affair went back and forth between government and PSA to obtain the necessary permission for cuts, scenes of unprecedented violence erupted at Poissy. Just as the government conceded most of PSA's requirements, the auto company's Citroen Division revealed it wanted to reduce the payroll by 6,000, or 14 percent. When a compromise is reached, as it will be, the focus then will settle on Renault.

Renault officials will not comment on reports that it is seeking cuts of 15,000 to 18,000 in its French work force of 102,000; but in view of anticipated recommendations of the Dalle committee, the reports are likely to be substantially accurate.

Shedding jobs at a state-owned corporation, given an ideological commitment toward employment and worker welfare, will be a sensitive affair. In France it will further widen the split between the ruling Socialists and their nearest supporters, and former allies, the Communists.

The problems would have manifested themselves earlier except for two years (1982-83) of record domestic demand for new cars. Each year's total topped two million units, one reason this year's decline of 15 percent in the first half looks so dramatic.

Those two good years saw PSA reach the bottom of its decline, then begin to claw back its lost market share with introduction of new models such as Peugeot 205 and Citroen BX. PSA fell behind Renault in 1980 and was still there at the end of 1983. But in the first six months of 1984, PSA climbed to 33.3 percent while Renault fell to 31.8 percent, its lowest share since 1973.

This year's improving PSA position — in a smaller French market — is a reflection of its newer models. Renault's fairly new R9/11 series remains competitive in the country and the big R25 has been well received. But Renault's true competitiveness will not return until its mainstays are modernized—the R5 starting Sept. 24 and the upper-medium R18 next year.

What worries both French car makers is the steady increase in France for imported cars. It has gone up steadily the past half decade, and in the first half of 1984 reached an unprecedented 34.9 percent share.

At the same time, Renault and PSA exports are down this year by 4.3 percent to 869,200. Combined with a fall of 19.3 percent (to 587,300) in registrations in France, it added up to a 10.6 percent overall drop in passenger car production in the first half of 1984 to 1.63 million. □

Outpouring of products

Bountiful crop of new European vehicles

By Richard Feast
European Editor

In just over three weeks the first of three major European auto shows will open its doors. The Paris exhibition (Oct. 4-14) will be followed in quick succession by Birmingham (Oct. 20-28) and Turin (Nov. 1-10).

These are not local trade shows, but major industry gatherings where important people will say important things to the world via attending media at press previews. By the time the public begins spending its francs, pounds and lire, the industry's brass will have left. The spectators in their absence will be mainly attracted by the glittering new products on display.

This year's new-model crop is bountiful. Several vehicles already have been revealed such as the Renault 25 and Espace, Saab 9000 and Lancia Thema. This fall's shows will reveal many more.

Main attractions in Paris will be the replacement for the R5, the Opel Kadett/Vauxhall Astra and Seat Ibiza. The R5 is to Renault what the new generation Golf is to Volkswagen — a refined and revised model that retains the instant appeal of the old one. The Ibiza is a small hatchback in the Fiesta category with styling by Giugiaro, body enginering by Karmann and engine development by Porsche; it will be the mainstay of the Spanish company's major European export drive.

Renault also may present its new generation Alpine, a mid-engine two-seater with Porsche performance. Sneak preview photos indicate very dramatic styling. The French Peugeot group will have no major unveilings, but will fill out its improving range with diesel and station wagon offerings.

Ford, with a substantial presence as an importer in France, will emphasize its status in the country via automatic transmissions made at Bordeaux, featuring a variable CTX for Fiesta and a new generation automatic with four-speeds and lock-up on top.

Ford's other news will be a production version of the Escort XR3i turbo, designed to counter the high-performance Kadett and forthcoming 16-valve Golf GTi. Among other newcomers from Germany are likely to be a 944 Turbo from Porsche, a Jetta station wagon from VW, and the 90 and four-wheel-drive 200 from Audi. The 90 is to the 80 what the 200 is to the 100 in Europe — a faster, more luxurious, up-market model.

Birmingham attention will focus on three sports car makers. Lotus may not preview its X100 sports car, the lower-price model which will use key Toyota components. Instead, it is expected to show a new mid-engine model with a 4-liter all-alloy V-8; during the company's financial difficulties, this model's development languished, but Lotus is seeking a customer for the powerful and economical V-8, which then would enable Lotus to use it in one of its own cars. The exhibition in Birmingham suggests Lotus may have found one.

The other sports cars are by a Panther EM25 and Reliant's Michelotti-styled two-seater which also will use a Ford drivetrain. Each company has U. S. exports in mind.

November is a new show date for Turin, whose recent events have been held in the spring. There also is a new location — the press shop of the former Fiat factory at Lingotto.

Alfa Romeo's main attraction will be the 90, an Alfetta replacement, and Lancia's will be the Thema, which will replace the Trevi and Gamma. But being Turin, the show will also be a designers' showcase with flambouyant exercises expected from Giugiaro, Pininfarina and Bertone; one theory suggests a Bertone-styled coupe for Volvo based on the 700 series.

Over the longer term, among new products expected during 1985 are replacements for Ford Granada, Renault 18, Talbot Horizon, Alfa Romeo Giulietta and mid-range Mercedes-Benz. There will be a sedan version of the Seat Ibiza (known as Malaga), a baby Lancia, Fiat's version of the Type 4, the front-drive Lada and the Jaguar XJ-40. The Austin Rover/Honda Project XX will appear late in 1985. □

How European prices compare

Model	B	D	F	I	GB
BMW 320i	100	109	114	117	129

Price disparity goes on

Little commonality in the Common Market

By Richard Feast
European Editor

While BL of Britain was being fined the equivalent of $270,000 for alleged infringements of Common Market competition rules, a European consumer association was conducting another survey of auto prices. The findings were predictable enough: There still are wide disparities in car prices between Economic Community member states. "British and Italian consumers still have a lot to gain from buying new cars abroad," reports the EBCU (European Bureau of Consumer Unions).

What makes the events timely is that they occur as the European Commission is pushing to equalize auto prices throughout the community. The jargon is "block exemption," and it has united the auto industry as seldom before. The proposal is to limit pre-tax prices to within a 12 percent band of each other. The auto industry is insensed because no other products in Europe have common prices, and there are dark mutterings about weaker companies going to the wall and factories closing.

The EBCU price survey was carried out in July. Its general basket of cars was priced on average 30 percent more in the UK than in Belgium, the country widely considered to have baseline selling prices. Italy was 21 percent more, France, 14 percent and West Germany 10 percent.

Such differences have led Italians to buy cars outside Italy, Germans buying in Denmark (where extremely high sales taxes mean pre-tax prices are set low) and to residents of the Republic of Ireland buying cars across the border in Northern Ireland which, as part of the UK, is considered to have high prices anyway. More than anything, though, it has resulted in the now familiar phenomenon of Britons buying in Belgium. This Anglo-Belgian trade has been very noticeable because an order for a right-hand-drive car with a normally left-hand-drive dealer is hard to disguise.

No one knows the exact extent of the one-way traffic across the English Channel. It is not as big as it once was because current exchange rates are less favorable and chunky discounts are now available in the UK. But the count still runs into thousands a year.

While Belgian dealers are keen to capture British orders, British car dealers are considerably less enthusiastic about the trend, as are British manufacturers who like to see each sale earn as big a margin as possible, and that normally is in the UK.

At the same time, British importers of BMW, Volkswagen and other products are upset with their Belgian counterparts for nabbing what they identify as their customers. This has led to several court actions. Ford of Germany was involved in one when it refused to supply right-hand-drive models. The European Commission's fine on BL (to be appealed) is another, and more are expected as the debate heats up between the industry and the consumer lobby over block exemption. □

Sales siesta

Mexico slumbers

The Mexican automotive industry is still not showing any signs of major upturn and the consensus of industry observers is that recuperation will still take a while.

Sales have not improved even though all assembly plants have authorized distributors to accept a 20-percent downpayment on new models, with a 36-month payment period and more liberal interest charges averaging approximately 25 percent annually.

Buyers apparently find these terms still too high and reductions are expected to be announced to stimulate lagging consumer interest.

Official figures for the first five months of the year place total sales at 121,421 units, compared with 125,474 in the similar period last year. This is a reduction of 4,053 cars, for a 3.23 percent decline.

It has been pointed out by analysts charting industry activity that sales in the home market are even less than shown since the statistics include vehicles exported.

Chrysler has moved up to second place in total sales, from fourth position last year. Volkswagen, as usual, heads the list with 32,681 cars sold in the January-May period this year, even though it slipped in not topping the 38,344 units sold last year.

Chrysler, with 20,973 cars sold, showed an improvement over the 17,420 figure for 1983. Nissan, Ford and Renault had reduced sales, but General Motors showed an improvement from 13,878 units in 1983 to 17,894 this year. □

Off to Cuba

Mexico sends tractors

The Dina Komatsu Nacional segment of Diesel Nacional (Dina) plans to export more than 300 crawler tractors to Cuba.

Nacional Financiera, the Mexican financing and development institution, said the exports will produce $34 million.

The tractor division was established in 1974, to produce crawler tractors for the construction industry. The firm is a joint collaboration of Nafinsa (Nacional Financiera) and Japan's Komatsu machinery and construction equipment manufacturer.

By 1981, the firm had a production capacity of 735 tractors annually and a full-time work force of 465. But the economic crisis sharply affected the firm's internal market — chiefly the construction industry which has been severely depressed the past several years. Dina Komatsu then switched its concentration to developing exports.

On the Cuba order, 36 tractors have already been shipped with monthly exports of a similar number until the contract with Cuba's Construimport is completed. Dina Komatsu exported 85 tractors in 1981 and 105 last year. □

Rasegan, Heaphy named to Hydra-matic posts

YPSILANTI, Mich.—Alexander H. Rasegan has been appointed director of product and process engineering for Hydra-matic Division of General Motors, and Maureen S. Heaphy has been named manager of statistical methods.

Rasegan formerly was with Cadillac as assistant chief engineer—chassis, and Heaphy was with the Quality and Reliability Staff of GM.

GM, EPA reach agreement on waste water case

WASHINGTON. — General Motors and EPA have reached an agreement that will bring certain GM plants into compliance with water-pollution rules by October, 1985.

GM ran afoul of Clean Water Act deadlines this year when eight of its plants were identified by EPA as unable to meet controls on the dumping of waste water containing metals and toxic substances into public sewage systems.

Under the consent agreement, GM will be required to build additional water-pollution-control facilities or modify existing ones by Sept. 28, 1985.

GM will also periodically have to update EPA on its water-pollution-control progress. Fines and penalties were set should GM prove unable to meet the 1985 deadline.

The plants covered by the agreements include GM's facilities in Arlington, Tex.; Van Nuys, Calif.; Doraville, Ga.; Atlanta; Kansas City; Kansas City, Kansas; Linden, N. J., and Norwood, O.

The consent decree will become final after a 30-day comment period expiring Sept. 26.

Import penetration is highest of year

August sales cool off, but top '83

By Jenny L. King
Staff Writer

August domestic new-car sales cooled a bit from the torrid July pace but stayed well ahead of the same month a year earlier.

Import sales were up a modest 2,500 units August to August, and they claimed their largest segment of the total market so far this calendar year — 25.97 percent, best penetration in exactly one year.

Industry sales for August numbered 815,199, up 10.15 percent from 740,085 in 1983. Of those, 603,469 were domestic units and 211,730 were imports. Domestic sales were up 13.66 percent from 530,960 the same month a year earlier. Imports were up 1.25 percent from 209,125.

The domestic daily selling rate averaged 22,351 oased on 27 selling days, up 13.66 percent from 19,665 on 27 days in 1983. July's daily rate was 27,364.

Year-to-date sales for the industry numbered 7,185,408, up 17.59 percent from 6,110,701 in 1983. Domestic sales for those eight months were up 24.56 percent, to 5,533,924 from 4,442,778. Imports slipped behind '83 by 0.99 percent, to 1,651,484 from 1,667,923.

August domestic sales, best since 1979 when 705,051 units were delivered, included sales increases for all the major auto makers except Volkswagen.

Honda's sales doubled to 12,217 from 5,865 and were twice VW's total of 6,398. A year earlier, VW Rabbit sales were 7,578.

Chevrolet includes Sprint; Honda includes imports and domestics; VWoA includes all VWs plus Porsche and Audi; Fiat includes Lancia; Dodge includes Colt, Challenger, Vista; Plymouth includes Colt, Challenger and Vista.

Ford Motor Co. reported a 22.92-percent sales increase for the month, climbing to 148,935 from 121,162. General Motors was up 9.23 percent. to 347,652 from 318,004. Sales of 70,736 put Chrysler Corp. up 9.64 percent from the year-ago 64,518, and American Motors was up 26.73 percent, to 17,531 from 13,833.

Shifts in market shares among the domestics were in favor of Ford, AMC and Honda. Ford was up nearly two percentage points, to 24.68 percent from 22.82 percent last year. American Motors expanded to 2.91 percent from 2.61 percent, and Honda was up to 2.02 percent from 1.10 percent.

GM slipped to 57.61 percent from 59.89 percent, Chrysler was down to 11.72 percent from 12.15 percent and VW dropped to 1.06 percent from 1.43 percent.

Lincoln-Mercury Division claimed it had the greatest sales increase among domestic makes in August with a 31-percent climb. The division said its share of the domestic market was an any-month record 9.9 percent, and its 56,103 sales were an August record. Ford Division sales were up 18.55 percent, to 92,832 from 78,304.

Plymouth was off 5.05 percent, Chrysler was up 23.83 percent and Dodge was up 8.58 percent. At GM, Buick and Cadillac announced record sales for August, Chevrolet was up 7.58 percent, Pontiac was up 23.60 percent and Oldsmobile matched its year-ago August sales exactly, 74,022.

At American Motors AMC was off 42.77 percent and Renault was up 39.81 percent.

• August import sales included a record for the month for Toyota and the 10th consecutive month of sales increases for Peugeot. Toyota was up 11.44 percent, Peugeot was up 43.97 percent, Volvo was up 4.40 percent to a record 7,543, Saab was up 11.76 to a record 2,367 and Jaguar was up 10.54 percent to a record 1,300.

Still suffering the effects of the Metalworkers' early-summer strike in Germany were Mercedes-Benz, down 4.63 percent; BMW, down 28.03 percent; Audi, down 1.09 percent, and Porsche, down 23.58 percent.

The market-class breakout for August was: Imports at 25.97 percent, intermediates at 22.10 percent, compacts at 18.12 percent, subcompacts at 14.45 percent, standards at 10.58 percent and luxury models at 8.78 percent.

A year earlier the chart read: Imports, 28.26 percent; intermediates, 26.56 percent; compacts, 16.11 percent; subcompacts, 11.15 percent; standards, 12.41 percent, and luxuries, 5.51 percent.

Late-August domestic sales were up 24.01 percent, to 237,078 from 191,170 last year. Daily rates were 23,708 versus 21,241, based on 10 days this year and nine in 1983, putting the '84 period up 11.61 percent.

In the final 10 days of August, GM was up 18.50 percent and earned 56.03 percent of the domestic market. Ford was up 32.76 percent for 25.49 percent of the total. Chrysler was up 23.87 percent and had 11.58 percent. AMC was up 31.39 percent to capture 3.12 percent; Honda was up 195.52 percent for 2.34 percent, and VW dropped 12.00 percent and earned 1.44 percent of the domestic market in the period.

In August, the top-selling domestic nameplate was Chevrolet Cavalier, with 31,495 units, followed by Ford Escort, 25,470; Chevrolet Celebrity, 21,883; Oldsmobile 88, 20,256, and standard Chevrolet, 20,145.

As more plants return after changeovers

Car output rises despite holiday

By Louise Kertesz
Detroit Reporter

Domestic auto plants returning to production last week, following model changeovers, offset the Labor Day downtime. Increased output at General Motors and resumed assembly at American Motors helped make up for shortened schedules.

U. S. auto manufacturers targeted completion of 127,109 cars last week, 1.60 percent more than the previous week's 125,112 and 8.67 percent above the year-ago week's 116,970.

So far this year, 5,473,402 cars have been assembled, an increase of 22.8 percent over the 4,458,805 completed at this point last year.

Breakdown for last week by company was: General Motors, 56.97 percent; Ford Motor Co., 23.04 percent; Chrysler Corp., 14.95 percent; American Motors, 3.02 percent; Honda, 1.82 percent and Volkswagen of America, .20 percent.

GM scheduled Saturday (Sept. 8) overtime at four plants. Fairfax (Kans.), Flint (G line) and Oklahoma City worked two shifts, while Wentzville (Mo.) worked one shift on Saturday.

Chrysler has scheduled daily overtime at two plants this week. Belvidere (Ill.) and St. Louis No. 2 are each scheduled to operate two nine-hour daily shifts. The same plants operated two eight-hour Saturday shifts.

GM picked as strike target; peace possible, 2 sides say

Continued from Page 2

what we do. We're a corporation with a future, and we are not going to mortgage it willy-nilly," he said.

Bieber said GM was picked as the target because the union felt it "offers the best opportunity for an agreement which will achieve our principal goals —meaningful job security and an economic settlement that represents fairness to our members."

In its first proposal, GM offered two lump sum payments during the three-year proposed agreement; $600 in the first year, $300 in the second and nothing in the third. GM also wants to change the COLA formula and not fold-in the $3.04 COLA float to the base wage. Profit sharing would continue.

The UAW said the offer was at best "meager."

According to one company negotiator, GM has not yet offered to alter the proposal although it is likely some changes will be made. He acknowledged that GM cannot be competitive with the Japanese even if it continues at its present hourly labor cost of $22.40, so some areas must be shaved.

One of those is health care where GM is hoping to cut the bill by 10 percent a year. It was $2.2 billion in 1983.

David Healy, auto analyst for Drexel Burnham Lambert, said a settling at GM without a walkout will require a 10 percent increase the first year, 10 percent the second and 7 percent the third.

Job security will be a major point in the talks between GM and the UAW.

Bieber said last week he has no intention of leaving the bargaining table without jobs guaranteed for a period longer than the length of the agreement.

A recent proposal to Ford indicated that the union wanted its 114,000 jobs guaranteed for six years. Workers leaving Ford would be replaced by those 20,000 currently on indefinite layoff. It is possible that the union is seeking a similar program at GM.

Truck production for August is best since 1978

U. S. truck makers posted their best August production in six years.

Manufacturers completed 261,835 trucks in August, 32.40 percent above the 197,741 assembled in the year-ago month. It was the highest output for the month since 278,378 trucks were built in 1978.

Domestic truck production remained steady last week though down slightly due to the Labor Day holiday.

U. S. truck manufacturers slated production of 56,071 units last week, down 4.46 percent from the previous week's 58,691, but 29.37 percent above the 43,342 of the year-ago week.

To date this year, 2,152,172 trucks have been assembled, 39.04 percent more than 1,547,899 completed during the same period last year.

General Motors plants in St. Louis, Pontiac (No. 5) and Flint (Lines 1 and 2) worked two shifts on Saturday (Sept. 8), while the coach facility in Pontiac worked one shift.

Chrysler has scheduled overtime at its Warren (Mich.) assembly plant this week. The plant will operate two nine-hour daily shifts. The Warren plant worked two eight-hour Saturday shifts.

Canadian output of cars, trucks strong in August

Canadian auto and truck manufacturers continued to accelerate production during the usually slow month of August. The industry posted its best auto build for the month in eight years, while the August truck total was the highest in the 20 years for which records are readily available.

Canadian makers assembled 72,275 cars during August, the best output for the month since 79,424 autos were completed in 1976 and 28.82 percent greater than 56,104 units assembled during the year-ago month.

The industry slated completion of 16,472 cars in last week's holiday week, down 284 units from the previous week's 16,756, but 14.05 percent greater than the year-ago week's 14,443.

So far this year, 740,734 cars have been built in Canada, 11.52 percent above 664,243 finished during the same 1983 period.

Truck manufacturers produced 63,863 units during August, 58.86 percent greater than 40,200 of the year-ago month.

Canadian makers targeted completion of 14,617 trucks last week, down 139 units from the prior week's 14,756, but 44.24 percent better than 10,134 finished during the year-ago week.

Year-to-date, 552,452 trucks have been built, 55.42 percent ahead of 355,469 assembled during the same 1983 period.

Chrysler Corp. estimated production of 1,965 Plymouth Voyagers, 1,955 Dodge Caravans and 780 Mini Ram Vans at its Windsor (Ont.) facility last week, bringing the year-to-date T-115 total to 153,255.

Import supply is 23½ days; inventory dips

By Kathleen Hamilton
Assistant Managing Editor

Inventories of new imported cars fell to a record low of 184,513 on Sept. 1, the result of the German strike, import quotas and continued strong demand.

The Sept. 1 stockpile was equivalent to a 23½-day supply —just a hair away from the record low of 23 days, set on

Table on Page 57.

June 1. The only reason that the Sept. 1 days-supply figure wasn't even lower was that selling during August was hampered by widespread shortages. The slower daily selling rate meant a higher days-supply figure.

For comparison purposes, there were 197,688 imported cars in inventory on Aug. 1, a 24-day supply. On Sept. 1, 1983, the inventory was 195,418, or a 25-day supply.

A 60-day supply is considered normal for imports, but that figure hasn't been reached since 1982. Automotive News has been tracking import inventories since mid-1981.

Truck inventories of 75,352 were at the lowest level since June 1, when there were 73,652 Japanese trucks in inventory. (All inventory figures in this article include vehicles at dealerships, distributorships and ports.) On Aug. 1, there were 86,785 new imported trucks on hand; on Sept. 1, 1983, there were 61,068.

The days' supply of trucks was 25, lowest since June 1,

U.S.-car stocks at 10-month low; days' supply up

By Kathleen Hamilton
Assistant Managing Editor

The traditional August sales doldrums increased the supply of new domestic cars in dealer and factory inventory from 47 days' worth on Aug. 1 to 57 days on Sept. 1, but the actual stockpile hit a 10-month low.

The Sept. 1 inventory of 1,277,484 was the lowest since Nov. 1, 1983, when it stood at 1,224,124. On Aug. 1, 1984, there were 1,297,864 cars in stock; on Sept. 1, 1983, there were 1,087,570.

Many of the cars in stock weren't even for sale on Sept. 1. They were '85 models, which

Table on Page 57.

hadn't been priced or invoiced at that point.

A Ford analyst estimated Ford Motor Co.'s inventory would equal a 56-day supply, instead of a 70-day supply, if only '84s were counted.

Chrysler Corp.'s would have been in the 58-day range instead of 74.

And although a similar figure isn't available from General Motors, its Sept. 1 inventory included stockpiles of its new N-cars—Pontiac Grand Am, Oldsmobile Calais and Buick Somerset Regal — even though they won't go on sale until next month.

The latest figures show domestic makers weren't able to lay in a heavy supply of cars before the UAW contract expired, despite production increases at GM and Ford.

• The Sept. 1 inventory in 1979, for example, stood at 67 days' worth for the entire industry and 51 days for targeted GM. Both figures were on the high end; yet, the contract was settled without a strike and with big pay increases at GM.

In contrast, the Sept. 1 inventory in 1970—year of the long strike against GM — stood at 48½ days for the industry and a mere 40 days for GM.

This year, the industry went into heavy bargaining with a 57-day stockpile; GM and Ford —both targeted by the union at the time inventories were counted—had 49 days and 70 days, respectively.

Of course, days' supply figures would plummet rapidly in

New program aimed at clearing out '84 models

$60 million in Chrysler incentives

By Joseph Bohn
Marketing Editor

Chrysler Corp., caught with a big backlog of unsold '84s only a month before new-model introduction, is being forced into costly dealer incentives to move them.

Chrysler still had 189,000 '84 domestic models in inventory Sept. 1 (149,000 cars and 40,000 trucks). It will have to spend an estimated $60 million to $65 million to clear them out.

Essentially, Chrysler is offering its version of the 5 percent carryover allowance on "old" new models about a month earlier than competitors, most of whom don't share Chrysler's carryover problem.

Chrysler has a normal schedule of incentive payments on all cars and, in addition, it is offering special bonus payments on problem lines like the Aries/Reliant, manual-transmission subcompacts and upscale cars like New Yorker and E-Class.

It also has payment allowances that take effect after its current incentives run out Nov. 20.

Last year at this time, with stronger demand, Chrysler had considerably fewer carryover units to worry about, and its costs to move them were less.

• Under one phase of Chrysler's new program, non-retroactive payments cover all '84 domestic cars. This phase runs from Sept. 11 to Nov. 20.

After a six-unit qualifier, dealers earn the following amounts: 0 to 33.9 percent of objective pays nothing; 34.0 to 66.9 percent pays $150 per unit; 67.0 to 99.9 percent pays $300 per unit, and 100 percent and over pays $500 per unit.

Program dates and amounts are the same for both Chrysler-Plymouth and Dodge divisions.

With regard to problem models, dealers get extra bonuses during this period on every one they sell, with no qualifiers.

The cars and amounts at Chrysler-Plymouth are: $200 on manual-transmission Horizon/Turismo; $400 on all Reliants; $300 on Laser turbo engine models, and $400 on Chrysler E-Class, New Yorker and Fifth Avenue.

Added bonus payments at Dodge are: $200 on Omni/Charger manual transmission models, excluding Shelby; $200 on Shelby Charger models; $400 on Aries; $300 on Daytona Turbo, and $400 on Dodge 600 four-door models.

From Sept. 11 to Nov. 20, Dodge dealers also receive incentive payments on '84 Rampage, Ramcharger and standard Ram pickups. There is a three-unit minimum qualifier.

Non-retroactive payments per unit are: 0-33.9 percent, nothing; 34.0 to 66.9 percent, $400; 67.0 to 99.9 percent, $500, and 100 percent and over, $600 per unit.

Beginning Nov. 21, Chrysler-Plymouth dealers earn the following amounts on all '84s still in stock: $300 on Horizon, $300 on Turismo, $400 for Reliant, $300 on Gran Fury, $300 on Laser without turbo, $400 on Laser with turbo, $300 on LeBaron, $400 on Chrysler E-Class and New Yorker and $700 on Chrysler Fifth Avenue.

Beginning Nov. 21, Dodge dealers earn the following amounts: $300 on Omni; $300 on Charger, including Shelby; $400 on Aries; $300 on Diplomat; $300 on Daytona without turbo and $400 on Daytona with turbo; $300 on Dodge 600 two-door and $400 on Dodge 600 four-door.

Beginning Nov. 21, the Rampage, Ramcharger and standard Ram pickup trucks all qualify for straight $400 payments.

Chrysler, so far, isn't offering incentives on its imported cars and trucks whose stockpiles — in contrast with those of other imports—ballooned on Sept. 1.

Chrysler had 9,200 '84 imported cars and 9,300 '84 imported trucks in inventory on Sept. 1.

The only incentive Chrysler currently has on imports is in California and Hawaii where it offers 8.7 percent financing on '83/'84 Ram 50 and Power Ram 50 pickups. That program runs out Oct. 15.

breaking news

Toyota increases prices 1.2 pct.

LOS ANGELES.—Toyota Motor Sales, U.S.A., has announced 1985 price increases averaging 1.2 percent, or $111. Car increases average 1.7 percent, or about $163; trucks have been increased an average of 0.2 percent, or $18. Base price of Toyota's two-wheel drive truck will remain at $5,998.

Toyota's lowest-priced car, Tercel three-door liftback, is $5,348, up $100. Base-price increases on the others: FWD Corolla, up 2.4 percent ($177) to $6,938; Corolla SR5, up 1.8 percent ($150) to $8,058; Camry, up 1.8 percent ($178) to $8,948; Celica, up 2 percent ($198) to $8,449; Supra, up 1.0 percent ($169) to $15,998, and Toyota Van, up 2.2 percent ($250) to $9,748.

Toyota 4Runner is unchanged. Cressida, restyled for '85, won't be priced until its mid-October introduction.

At EPA hearing

Gradual lead phaseout favored by witnesses

By Geoff Sundstrom
Washington Reporter

WASHINGTON. — EPA's proposals to accelerate the removal of lead from the nation's gasoline supply passed through two days of public hearings without significant incident.

EPA's comment period on the proposed lead phase-down rules ends Oct. 1, 1984.

Sixty-seven witnesses testified on various aspects of EPA's proposal to reduce lead limits in gasoline by 91 percent in 1986 and to ban lead totally by 1995. The lion's share of testimony favored the phase-down process.

Most witnesses acknowledged that leaded gasoline use has remained high despite both their own and EPA's forecasts. Most witnesses seemed to accept lead's adverse health effects as a given.

The tendency to accept the need for a phase-down was present even among petroleum industry representatives, whose concerns rested primarily on whether EPA would allow sufficient time to make necessary plant conversions and allow for the replacement of lead with substitute octane enhancers and antiknock compounds.

Many argued for a slightly delayed phase-down, but a phase-down nonetheless.

In regard to octane requirements, methanol's potential in this area was mentioned frequently, although EPA is still evaluating the fuel's environmental impact.

Concern was expressed by the medical community that EPA's attention to the problem of lead in gasoline as a contributor to high blood-lead levels in children might be eclipsing what is believed to be the number one culprit: Lead-based paint in older housing.

But the medical consensus seemed to be that removing airborne sources of lead exposure could only be a positive step for the general population.

Ethyl Corp., the nation's largest supplier of lead-based fuel additives, pursued this tack, saying lead substitutes used by the petroleum companies to regain lost octane and antiknock properties might be more harmful than lead.

Ethyl also repeated its call for the government to tackle lead-based paint before blaming lead-poisoned children on the burning of leaded gasoline.

EPA responded that lead in house paint is the responsibility of the Department of Health and Human Services and that the agency is also concerned about misfueled vehicles that defeat vehicle emission control systems.

• The retailing end of the petroleum industry almost uniformly opposed an EPA suggestion that gasoline retailers be held in some manner responsible for motorists who misfuel their vehicles at service stations.

The industry also opposed a suggested price-cap on leaded fuel, aimed at holding the price of leaded fuel even with the price of regular unleaded blends.

EPA had proposed the price caps in response to earlier industry cries that a phase-out of leaded gasoline would hit less-well-off Americans who drive older vehicles requiring leaded fuel.

The industry had said that as demand for leaded gasoline went down and the costs of reducing lead content went up, the price of low-leaded gasoline could well rise above that now charged for regular unleaded.

The industry said price controls of any kind would distort the marketing system, possibly leading to shortages and unfair competition.

Michigan dealers install Lee

John Lee, left, John Lee Oldsmobile, Inc., Ann Arbor, Mich., was installed as the 1984-85 president of the Michigan Automobile Dealers Assn. at the group's annual convention. Also pictured, from left, are, Lee's wife Marge, Peggy Hanson and Huge Hanson, Garber Buick of Bay City. Hanson is the dealer group's past president.

Domestic total is 150,240

Early-September sales up 13 pct.

By Jenny L. King
Staff Writer

With the end of the 1984 model year just around the corner and the interference of summer's last holiday, Labor Day, early September domestic sales ran up a modest total but continued well above year-ago numbers.

Sales posted their third consecutive 10-day increase and brought to 22 the number of 10-day reporting periods ahead of 1983 counterparts.

With just seven selling days this year, the daily average for the period was 21,463, up 29.75 percent from 16,542 figured from last year's eight days.

Sept. 1-10 sales totaled 150,240, up 13.53 percent from 132,333 in 1983. Volkswagen was the only maker to turn in a smaller sum, its sales down 33.50 percent to 812 from 1,221. On a daily-rate basis, VW sales were off 24.18 percent.

Honda, breathing down American Motors' back, was up 127.51 percent, to 4,234 from 1,861. AMC reported a sales estimate of 4,250, up 1.19 percent from 4,200. On two occasions earlier in the year Honda surpassed AMC in 10-day sales, but its year-to-date total of 91,745 is more than 50,000 units behind AMC's 141,800. On a daily-rate basis Honda sales were up 159.66 percent and AMC was up 15.62 percent.

Chrysler Corp. dealers delivered 18,191 new passenger cars in early September, up 18.50 percent from 15,351 (up 35.44 percent daily rate). Ford Motor Co. reported sales of 39,328 units, up 19.67 percent from 32,865 (up 36.76 percent daily rate).

General Motors was up 8.58 percent, to 83,425 from 76,835. GM was up 24.09 percent on a daily-sales-rate basis. It was, however, GM's smallest total for any 10-day period this calendar year.

Honda helped itself to its greatest market penetration of 1984 with a 2.82 percent share of the domestic total in early September. This compared with 1.41 percent a year earlier.

GM earned 55.53 percent, down from 58.06 percent. Ford was up to 26.17 percent from 24.84 percent. Chrysler held 12.11 percent compared with 11.60 percent in 1983, AMC slipped to 2.83 percent from 3.17 percent and VW plunged to 0.54 percent from 0.92 percent.

Fates of the domestic makes varied. At Chrysler Corp., there was only good news: Plymouth was up 10.73 percent, Chrysler was up 31.81 percent and Dodge was up 13.33 percent. At Ford Motor Co., Ford was up 20.87 percent, Mercury was up 23.13 percent and Lincoln was down 1.88 percent.

GM's Buick was up 7.65 percent year to year, Cadillac dropped 8.19 percent, Chevrolet was up 11.93 percent, Oldsmobile was off 2.10 percent and Pontiac was up 32.17 percent. American Motors' AMC make (Eagle) was off 57.14 percent while the Renault Alliance/Encore combination was up 12.86 percent.

Dennis revamps Lada, seeks more car lines

By Dan McCosh
Detroit Reporter

Canadian-based importer Peter Dennis now plans to import yet more brands into a Canadian market rapidly becoming glutted with esoteric cars.

Dennis recently bought out his partners and is reorganizing Lada Cars of Canada. The firm has been renamed Peter Dennis Motor Co.

Canada, a major exporter of raw materials to Soviet-bloc countries, recently has been receiving a small but growing number of Eastern-bloc imports.

The trend has been accelerated by the high price of U. S.-built cars as Canadian currency has fallen to some 75 percent of the value of the U. S. dollar.

The Czechoslovakian Skoda has sold some 660 units in Canada since the beginning of 1984; the Romanian Dacia 165; the Italian Innocenti 570, and the Hyundai Pony 6,500.

The four-wheel drive Suzuki, a Japanese car unavailable in the U. S., sold 1,400 units, the Nissan Micra 2,300, and the four-wheel drive Lada Niva about 50.

Lada sold about 1,600 cars for the period, down from 2,800 a year ago.

Dennis, also a stockholder in Dennis Brothers, a UK-based custom truck manufacturer, has been importing and distributing

Government auto fleet increases to 443,754

WASHINGTON. — The U. S. government's worldwide fleet of motor vehicles grew by 13,072 to 443,754 during fiscal year 1983, according to the Federal Government's General Services Administration (GSA).

The government operated 407,237 domestic vehicles and 36,517 foreign vehicles in 1983, an increase of approximately 3 percent from the previous year in both categories, GSA said.

GSA's Federal Motor Vehicle Fleet Report for fiscal 1983 said it cost $1,284,321,208 to operate the 93.5 percent of the government's vehicles assigned to large agency fleets last year.

Of that total expense, $107,912,476 was spent on foreign operation and $1,176,408,732 on domestic operations.

Government vehicles logged 3,535,066,000 miles during the past fiscal year at an average cost of 36.33 cents per mile, GSA said.

The government operated 97,013 sedans, 15,624 station wagons, 2,994 ambulances, 10,503 buses and 317,620 trucks.

GSA reported that government-procured vehicles in 1983 averaged a fleet fuel economy of 29.6 MPG, 3.6 MPG above the government's fuel economy requirements.

GSA noted that improvements in the management of the interagency fleet should result in cost savings in fiscal 1984.

Those actions include the creation of automated, centralized maintenance control centers, a reduction of in-house maintenance facilities and personnel, acquisition of new vehicles with extended warranty coverage, large-scale testing of shorter replacement cycles and contract rental in place of short-term vehicle assignments.

The driving team of Jack Baldwin, Ira Young and Bob Reed have set the pace in the Camel GTU class this season, piloting their Mazda RX-7 to 11 top five finishes in class.

Astro set for late-fall introduction

The 1985 Astro minivan—which Chevrolet describes as a multipurpose vehicle with van space inside—is slated for a late-fall introduction. It has a multitude of seating combinations available with bucket and bench seats for 2, 4, 5, 7 or 8 adults. Standard power plant is a 2.5-liter four-cylinder engine with electronic fuel injection.

GM's 'in-between' van called bigger than mini

Chevrolet's entry in the small-van market, scheduled for November introduction, is the highlight of the division's truck line-up for 1985.

The Astro — GMC's version is called Safari — is described by Chevrolet as an "in-between" van, smaller than the conventional Chevy van but larger than other minis on the market.

Two models will be offered: One designed mainly for cargo hauling and the other for passengers. The cargo van now is in production in General Motors' refurbished plant in Baltimore. The passenger model will roll next month.

The GM entries feature rear-wheel drive, a wide range of power trains and a bumper-height load floor that is flat front to rear and 22½ inches off the ground.

"Curb weight of an Astro powered by the V-6 starts at less than 3,300 pounds," said R. D. Burger, Chevrolet general manager. "And properly equipped, it will carry a GVW rating of more than 5,000 pounds. It has a .38 aerodynamic drag coefficient—lower than many current-model passenger cars and lower than any other small van."

The van has room for eight adults with all available seats in place, and 151.1 cubic feet of cargo space with all except the front seats removed. It has a sliding door on the right side and swing-out rear doors which Burger said provide a wider opening than conventional vans.

Although less than six feet (71.7 inches) from road to roof, he said, the van has four feet of walk-through space inside. It is 77 inches wide, three inches less than the conventional model, he added, but seating dimensions are about the same.

Burger said the rear suspen-

IH is recalling 16,000 buses for cable repair

CHICAGO, Ill.—International Harvester is voluntarily recalling approximately 16,000 S-Series school buses. The buses are powered by either the 9-liter or DT-466 diesel engines, and were produced during the period from September, 1978, through May, 1984.

The recall involves under-dash routing of the manual engine shut-down cable, which could sag and interfere with the accelerator pedal linkage.

Such interference could prevent engine speed from returning to idle, the firm said. Correcting the potential hazard consists of straplocking the shut-down cable away from the path of the accelerator linkage.

No accidents or injuries have been reported as a result of this possible interference, an IH spokesman said. Corrections will be made by authorized International truck dealers at no charge, he added.

truck industry news

Total hits 2,764,426 units, with gains in all major markets

8-month sales up 37.7 pct. over '83

Eight-month sales of new trucks of all types in the U. S. were almost 40 percent higher than a year ago, but they were down slightly from the alltime high for the period set in 1978.

Through August, according to preliminary manufacturer and distributor reports, franchised dealers and factory outlets retailed 2,764,426 units, up 37.7 percent from last year's 2,006,926. In 1978, the January-August total was 2,831,861 units.

During the month, 314,639 new trucks were sold in the U. S., an increase of 24.3 percent over the year-ago 253,164 units. In August, 1978, a record 359,243 units were retailed.

In the January-August period, there were significant increases in all three major segments.

Light-truck sales through August totaled 2,584,403 units, up 37.1 percent over last year's 1,885,668. Mediums were 19.3 percent higher, from 32,606 in 1983 to 38,908. Heavies were up 59.2 percent to 141,115 units, compared with 88,652 a year ago.

• August sales of light trucks were 23.4 percent higher than last year, 291,638 versus 236,429. Mediums were up 5.5 percent, from 4,751 a year ago to 5,012. Heavies totaled 17,989 units, up 50.1 percent from the year-earlier 11,984.

Compact trucks, domestic and imports, accounted for 42 percent of the eight-month sales. Through August, the count was 1,158,383 units, up 63.1 percent from last year's 710,252.

Domestic compacts took 64.8 percent of the market with 750,853 sales, a gain of 87.5 percent over last year's 407,530 units. Imports totaled 407,530 units, up 31.6 percent from the year-ago 309,743.

August sales of the small trucks were up 42.4 percent to 145,967 units, compared with 102,500 last year.

Sales of the domestics hit 80,714 units, 74.5 percent higher than last year's 46,248, and accounted for 55.3 percent of the total. The import total for the month was 65,253, up 16 per-

Mack will trim output; sees slack in demand

ALLENTOWN, Pa. — Mack Trucks, Inc., has announced it will reduce production schedules in November, calling the adjustments "normal procedures reflecting anticipation of traditional reduced industry demands during the months of December, January and February."

Noting that Mack aims to "maintain prudent inventory levels," John B. Curcio, president, said the heavy-truck industry "is closely tied to national economic activity, with growth rates that should tend to level off somewhat with the recently reported slowdown in GNP growth.

"The revised production levels," he added, "represent a more sustainable rate now that some of the industry's pent-up demand has been satisfied. Industry volume should continue at relatively constant levels through the remainder of 1984, with the possibility of reduced demand in 1985."

Mack's current level of 154 trucks a day in its three assembly plants will be reduced to 134 units daily.

Daily production will be cut from 83 to 71 units at the Allentown facility, from 49 to 46 trucks at the Macungie (Pa.) plant, and from 22 to 17 units at the facility in Oakville, Ont.

• Curcio said Mack reacted cautiously to the sharp increase in demand late in 1983 and the first quarter of 1984, and then increased production significantly in the second and third quarters in response to a big order upturn and to replenish dealer inventories.

He said Mack's factory sales increased at a faster rate (130 percent) then the industry average (119 percent) during the first half, over the same period in 1983.

Mack penetration of Class 8 domestic retail sales, he added, rose from an average of 14.6 percent in the first quarter — when vehicles were in short supply — to 17.5 percent in the second quarter, "one of the few producers in the industry to post a quarter-to-quarter increase."

Curcio said Mack's calendar 1984 results will be best since 1979 in terms of sales, production and earnings.

Texas Ford deal sells about 100 a month in spite of short supplies

New truck center is sales booster

by Jess F. Blair
Staff Correspondent

LUBBOCK, Tex. — Pollard Ford Co. has geared up for the booming truck business by adding a new truck center, which has 6,800 square feet of floor space, 2,100 devoted to showroom, a customers' lounge and offices.

"We opened early in the summer," said Mike Edwards, general sales manager, who supervises 26 salesmen in both the car and truck departments.

"We are selling about 100 pickups and other trucks a month and could sell more. The problem is getting them from Ford when we need them."

Edwards said a number of employes contributed ideas in designing the new building. The most useful suggestion, he said, was the elevation of the floor 3½ feet above ground level.

"With one entire side glassed in and facing the truck lot, the salesmen can spot anyone who drives up," said Edwards.

"Previously, we could hardly see the lot because it was located off to one side of our offices. The vehicles on the lot would block our ground-level view.

"Our lounge is cool and restful with all the conveniences. We have an unhurried atmosphere in which customers are not rushed by aggressive sales people."

The center has five full-time truck salesmen, all fairly young and with special training in trucks, Edwards said. "A man buying a pickup is more interested in performance than looks, since a truck is not considered a status symbol, in most cases," he added.

The training, Edwards said, stresses that the company is not only in the truck business, but also in the "people" business.

"We like to get personally acquainted with our customers," he said. "We don't pressure them into buying, and are careful not to make promises we can't keep. Treat them well, offer a fair deal and they will come back. I believe about 70 percent of our business now is in repeat sales."

The truck center currently stocks about 150 vehicles on the lot, but has room for 250, with new and used vehicles coming and going all the time.

The truck center has its own parts department in the back of the building and is located only a short distance from the service stalls. It recently had a computer system installed and will soon have terminals in each sales office.

• "Total dealership sales are up about 50 percent in the last nine months," Edwards said, "so it looks like we may set some new sales records. Right now, we are pushing into the medium-truck market, and will try to increase our fleet sales. The buyers are out there, and we are now equipped to take care of them."

To get the most out of the salesmen he noted, Pollard has set up one of the highest commission plans in the district. Most of the salesmen have been with Pollard about two years.

Another new feature at Pollard is a separate automotive store that sells parts and many accessories, such as filters, batteries, spark plugs, auto-

25,000th truck built by Western Star

BELLEVUE, Wash.—Western Star Trucks recently built its 25,000th vehicle, marking the event with a celebration at its main production facilities in Kelowna, British Columbia. The company built its first truck in March, 1967.

The 25,000th unit is one of 100 "All Star" limited-edition highway trucks to be produced this year, and will be delivered to a dealer in Wichita.

Ford's Williams to be keynoter at TBEA meeting

LAS VEGAS.—Edson P. Williams, general manager, Ford Truck Operations, will be the keynote speaker at the Truck Body & Equipment Assn.'s 37th annual convention and exposition here Sept. 30-Oct. 3.

Williams will discuss future sales trends and market forecasts for the truck and truck-equipment industries.

Stuart S. MacKay, president, MacKay & Co., a management consulting firm, will discuss "Could Truck Dealers Become Obsolete — What Truck Equipment Distributors Should Expect."

Other presentations will cover telemarketing, what makes a good manager, and cash-flow management.

Truck '84, co-sponsored by TBEA and American Trucking Assns., will feature specialized exhibits serving the various segments of the transportation industry.

The show, open daily from 9 a.m. to 5:30 p.m., will be in the Las Vegas Convention Center. Business meetings will be held at the MGM Grand Hotel.

Falls to 23.90 pct. of first-half registrations

Import market share down 4 points

By Jenny L. King
Staff Writer

First-half import registrations, up some 8,000 in number and 0.69 percent this year compared with 1983, slipped a dramatic 4.05 percentage points in a market characterized by a 24-percent increase in the total for the domestic makes.

According to figures compiled by R. L. Polk & Co., new import registrations totaled 1,198,428 the first six months of 1984 compared with 1,190,187 a year earlier. They accounted for 23.90 percent of a growing market, down from 27.95 percent at the onset of the sales recovery, mid-year, 1983.

June import registrations were down 3.29 percent, to 223,948 from 231,556 a year ago. Their share of the market dipped to 24.14 percent from 26.65 percent.

Nissan headed the top 10 imports for the month with 45,780 units and 20.44 percent of the total. Its share was 20.44 percent, down 0.81 percentage points from 21.25 percent a year earlier.

Toyota, dropping into second place, lost 2.43 percentage points, to 20.16 percent from 22.59 percent. Honda, whose numbers were enhanced by the addition of growing supplies of U. S.-built Accords, was up 2.56 percentage points June to June.

Fourth-place Volkswagen, another import-domestic blend, was up 1.32 percentage points. Mazda and Subaru lost ground as did Volvo and Mercedes-Benz, while Audi and BMW made inroads in June.

• Ten imports held 90.60 percent of the import market this June, an increase of 1.73 percentage points from 88.87 percent a year ago.

Honda was the first-half market-share leader with 19.66 percent of the import total. Honda gained 3.81 percentage points from its '83 standing of 15.85 percent. It was the only Japanese make to show improvement.

Toyota was down 3.37 percentage points, Nissan lost 2.88 percentage points, Mazda was off 0.82 percentage points and Subaru slipped 0.21 percentage points.

The European contingent was on the move in the first half, led by Audi's 1.23-percentage-point gain. VW was up 1.20 percentage points, Volvo was up 0.35 percentage points, Mercedes was up 0.36 percentage points and BMW was up 0.72 percentage points.

The top 10 imports were up 0.40 percentage points, to 89.87 percent of the total from 89.47 percent last year.

Japan, as the major importer, remained 'way ahead of the competition in June, but skidded to 70.69 percent of the total from 76.02 percent a year earlier. W. Germany grew to 13.48 percent from 9.74 percent, the U. S. claimed 8.20 percent compared with 5.33 percent and Sweden had 5.38 percent this June, 5.49 percent a year earlier.

• Numbers of cars per country this year versus last were:

	June, 1984	June, 1983
Japan	158,313	176,029
W. Germany	30,184	22,552
United States	18,364	12,340
Sweden	12,053	12,714
France	2,757	5,166
Great Britain	1,655	1,620

Atwood outlines U. S. 5-year plan

GM budgets $1 billion a year for tooling

CHICAGO. — General Motors expects to invest more than $1 billion in each of the next five years for new machine tools for its domestic operations, said Executive Vice President Donald J. Atwood.

"We are not engaged simply in a replacement of yesterday's machine tools, but in the creation of a superior manufacturing capability," Atwood said. "More than ever, the auto industry must aim for the highest levels of technology, flexibility and productivity."

Speaking to the National Assn. of Machine Tool Builders, Atwood said GM is seeking an unprecedented degree of integration of its new manufacturing systems with computers, controls, machines and transfer equipment.

"GM's expenditures for machine tools of all kinds for our U. S. operations will rise in the immediate years ahead and will likely exceed $1 billion in each year of the 1985-89 period," he said.

American machine tool builders can expect to supply a substantial portion of those new machines, he said. "Let me assure you of one thing: GM supports a strong U. S. machine tool industry," Atwood said.

Emphasizing the need for creating total systems of machine tools and related material handling devices, Atwood said, "buying pieces of this and parcels of that will be far less common at GM."

Given this trend, he added, joint ventures may become more common in the machine tool industry.

"It also looks like the industry may be moving toward a structural realignment in which some companies will act as systems packages, with many others supplying their specialty products to these systems-oriented companies."

He added: "A number of factors indicate the machine tool industry will increasingly be user-driven.

Specific areas he mentioned in which GM could help the machine tool industry include:

1. More communication of the direction and dimensions of the company's needs for machine tool technology.

2. Earlier involvement of machine tool builders when major projects are being planned.

3. Possible help with significant up-front engineering costs associated with developing proposals for major projects involving leading-edge technology.

Market share for import cars drops 4 points

Continued from Page 26

anese passenger cars. Japan dropped to 70.19 percent from 77.38 percent in 12 months. West Germany claimed 13.77 percent this year and 10.25 percent in 1983. The U. S. grew to 8.12 percent from 4.35 percent and Sweden was up to 5.62 percent from 4.97 percent. The breakdown:

	6 Mos., 1984	6 Mos., 1983
Japan	841,151	920,944
W. Germany	164,979	122,009
United States	97,280	51,777
Sweden	67,448	59,110
France	15,567	23,239
Great Britain	8,911	7,449
Italy	2,871	5,314
Ireland	221	345
TOTAL	1,198,428	1,190,187

Registrations of imported trucks were up 56.16 percent June to June, to 62,950 from 41,101. The breakout by major importer was as follows:

	June, 1984	June, 1983
Toyota	23,503	15,316
Nissan	17,038	11,369
Mazda	9,000	5,988
Isuzu	4,550	—
Dodge Ram 50	—	2,342
Others	8,859	6,086
TOTAL	62,950	41,101

First-half truck registrations were 58.08 percent ahead of 1983: 342,991 compared with 216,978. Totals for the major makers were:

	6 Mos., 1984	6 Mos., 1983
Toyota	126,001	74,755
Nissan	98,502	56,419
Mazda	56,192	31,053
Dodge Ram 50	20,128	12,616
Others	42,168	42,135
TOTAL	342,991	216,978

Federalization firms offer guide to importing

WASHINGTON. — The Automobile Importers Compliance Assn., a group of engineering and testing firms specializing in the federalization of foreign cars not normally imported into the U. S., has produced a handbook explaining the procedures involved for importing such vehicles.

Entitled Handbook of Vehicle Importation — A Guide for Importing a Vehicle into the U. S., it is available for $19.95 plus $3 shipping and handling from TechLaw, Inc., 12011 Lee-Jackson Memorial Highway, Suite 530, Fairfax, Va. 22033.

TOP CARS

Total hits 2,764,426 units, with gains in all major markets

8-month truck sales up 37.7 pct.

Continued from Page 16

cent from the year-ago 56,252.

The number of unsold trucks in retailers' hands on Sept. 1 was up significantly over a year ago. The total was 696,579 units, compared with 509,135 at the same time in 1983.

There were 638,279 light trucks in inventory at the end of August, 13,527 mediums and 44,773 heavies. At the same time a year ago, the totals were 474,239 lights, 9,301 mediums and 25,595 heavies.

• Big Three truck dealers retailed 221,807 vehicles during the month, up 17.9 percent from last year's 188,070. The eight-month total of 2,121,404 units was 31.7 percent higher than the year-ago 1,611,212.

Chevrolet outsold Ford in August for the first time since May. Dealers retailed 84,038 trucks, a gain of 15.5 percent over the year-earlier 72,748. Through August, the count was 768,671, up 23.1 percent from last year's 624,568.

Ford reported 83,053 retail sales for the month, an increase of 10.7 percent over the year-ago 75,007. In the January-August period, 781,279 vehicles were sold, 23.8 percent higher than the 631,311 retailed in 1983.

Sales of Dodge and Plymouth trucks for the month were 71.3 percent higher than a year ago, 32,849 versus 19,058. The total through August was 351,668, an increase of 96.9 percent over last year's 178,604 units.

August sales of the compact Dodge Caravan and Mini Ram Van and the Plymouth Voyager totaled 10,096 units, and represented 30.9 percent of the month's count. Through August, the total was 123,463, good for 35.1 percent of the eight-month count.

GMC dealers retailed 22,067 trucks during the month, an increase of 3.8 percent over the year-earlier 21,257. The eight-month total was 24.4 percent higher than last year, from 176,729 units in 1983 to 219,786.

Sales of Jeep four-wheel-drive vehicles in August totaled 10,959 units, an increase of 128.3 percent over the year-earlier 4,800 units. The January-August count was up 110.2 percent to 98,739, compared with 46,984 in 1983.

The downsized Jeep Cherokee and Wagoneer accounted for 52.5 percent of the month's total with 5,748 sales, and 56.5 percent of the eight-month count with 55,817 units.

Only 10 of the discontinued Volkswagen compact front-wheel-drive pickups were retailed during the month, compared with 353 last year. Through August, the total was 379, versus 3,986 in the like period a year ago.

Toyota dealers retailed a record 37,322 compact trucks during the month, an increase of 42.7 percent over last year's 26,161, the previous high. The eight-month total hit a record 181,528 units, up 52.3 percent over the year-earlier high of 119,221.

Nissan/Datsun dealers sold 15,912 compact pickups during the month, a gain of 6.2 percent over last year's 14,977. Almost half of the month's count—7,891 units—were vehicles assembled in the U. S. plant.

• The total through August was 140,914, an increase of 53.4 percent over the 91,835 units retailed in the like period in 1983. Vehicles built in the U. S. accounted for 46.1 percent of the total, or 64,989 units.

Mazda sales during the month were up 31.4 percent to 9,316 units, compared with 7,088 a year ago. Through August, the total was 80,636, an increase of 71.5 percent over last year's 47,024. Both August and eight-month sales were new highs.

In August, Isuzu dealers sold a record 4,517 compact trucks, a gain of 90.1 percent over the previous year's 2,367. The eight-month count—also a new high—was 27,397, an increase of 76.7 percent over the year-earlier 15,508.

Record Mitsubishi sales for August and the January-August period were reported.

During the month, dealers retailed 1,258 units, up 64 percent over the previous year's 767 units. The total through August was up 85 percent to 10,018 units, compared with 5,416 in the like period in 1983.

EPA may deny Ford bid to extend pollution timetable

WASHINGTON. — Ford Motor Co.'s bid to extend certain EPA air pollution compliance schedules for four of its Michigan assembly plants will probably be denied, according to an EPA notice.

Ford is seeking an extension of compliance deadlines covering Volatile Organic Compound (VOC) emissions produced from surface-coating operations.

However, EPA has proposed denial of Ford's request since Michigan does not have an approved 1982 Ozone State Implementation Program for the Detroit area.

EPA policy requires Ozone SIP attainment before granting site-specific exemption in non-attainment areas such as Detroit.

Moreover, Ford's electrophoretic deposition processes (EDP) are already in operation, while EPA rules allow time extensions only for primer surface operators scheduled to install EDP systems.

Ford's request covers two plants in Wayne, one in Wixom and one in Dearborn.

GM gets Army contract

PONTIAC.—The U. S. Army Tank-Automotive Command, Warren, Mich., has awarded General Motors Truck and Bus Group here a $10,905,034 modification to a fixed-price contract with economic price adjustment for 458 ambulance M1010 trucks.

As old cars become more important... so does the newest Black Book.

Using outdated, inaccurate auto values is risky business, especially where older cars are concerned. Your best protection is the Black Book Old Car Market Guide, with its up-to-date prices for vehicles that pre-date our regular Used Car Market Guide by 1-7 years. So you can safely determine the value of a car that's as much as 14 years old.

The Black Book Old Car Market Guide has the current, timely and accurate figures you expect of other Black Book Guides because the valuations are provided by the same on-the-spot professional reporting from local auctions in each area.

Every two months you can count on an updated, pocket-size report that shows market prices in two appraised conditions: Clean and Average. These figures are actual sale prices recorded from major auctions, then tabulated with computer precision.

Since 1955 Black Book publications have set the standard for fast, accurate reporting of the entire auto market from specialty vehicles to trucks and imports. Now to meet the needs of the times, the Black Book Old Car Market Guide becomes a vital source to help eliminate your risks and create new opportunities.

Anything Less is a Guess!

Isuzu purchase of U.S. parts to top $6 million

LOS ANGELES. — American Isuzu Motors, Inc., said it plans to purchase more than $6 million in U. S.-made parts for its imported cars and pickup trucks during 1984.

The majority of the purchases are for items installed at ports of entry, and the remainder are items dealers can sell or install.

The largest projected purchase, at $2.4 million, is for step bumpers for the P'UP pickup. The bumper has proved to be such a popular item that Isuzu in Japan has recently been purchasing them for the Japanese domestic market, the company said.

Fitzpatrick is 25

Dennis begins reorganizing Lada operation in Canada

Continued from Page 3

Russian-built Lada cars in Canada since 1978, but sales recently have been hurt by the new competition.

Hyundai also recruited former Lada sales manager John Wright as its vice president and general manager.

Dennis' national sales manager, Rick Blackmore, says Lada isn't Hyundai's only target. "It's also affecting the low-end Japanese cars," he said. "There is a vacuum there because of the import restrictions."

A new Porsche-designed front-drive Lada 2108 model is due in the 1986 model year. Meanwhile Dennis has been shopping among various European manufacturers for additional cars for his 85-dealer network.

A Dennis spokesman said a deal is anticipated before the end of the year, but he declined to identify the companies in the negotiations.

The lowest-priced Lada Signet sells for $4,998 (Canadian), compared with $5,995 for the base Hyundai Pony. Lada's Niva model sells for $7,998. Lada cut its prices recently on some models.

Greenwald sees clear sailing

Continued from Page 8

whole momentum on exports and have been very single-minded about that. Compared to the Mexican economy, the Mexican thrust has been on oil, with the expectation that would be their economic growth, as opposed to manufactured products.

"If your main thrust is to be quality and cost to export," Greenwald said, "one of the things you don't do is say to a manufacturer of cars and trucks that if you want to manufacture, you've got to buy in this country. There is the example (in Mexico) of one or two suppliers saying if you want to build cars, you have to buy from us.

"There's potential in Mexico. As an experiment we shipped 3,000 K-cars to sell in the U. S. We ran special tests. The quality is there, but our costs are not all that impressive — that's the point."

But days' supply rises to 57

Domestic stocks at 10-month low

Continued from Page 1

the face of an increased sales pace. The August daily selling rate was the lowest since Oct. 1, 1983, and represented the third straight monthly decline.

American Motors cut its inventory with proionged downtime, but its daily selling rate fell about 30 percent during August. It went into the model-cleanup period with a 70-day supply of domestic cars.

Chrysler cut its inventory for all three makes, but its sales rate fell by more than its inventory cuts, pushing up its days-supply figure.

Ford increased its inventory during the period, mostly in its big-car lines which weren't selling as quickly last month.

• At GM, both inventory level and sales rates were down. Buick and Oldsmobile were the only divisions to be riddled by widespread shortages.

Volkswagen's domestic Rabbit supply finally reached the normal range, at 58 days, after a prolonged plant shutdown for changeover to the new Golf.

Honda's inventory of domestic Accords increased a little faster than its sales during August, bringing its supply to 21 days' worth. However, its stock of imports fell to two days' worth, a new industry low.

Domestic car inventory was split this way on Sept. 1: GM, 49.16 percent; Ford, 30.20 percent; Chrysler, 15.26 percent; AMC, 3.56; VW, 1.07 percent, and Honda, 0.75 percent.

One month earlier the shares were GM, 51.43 percent; Ford, 26.19 percent; Chrysler, 16.70 percent; AMC, 3.59 percent; VW, 1.53 percent, and Honda, 0.56 percent.

The sales rates fell in every size class, pushing up days' supplies in every class. Only in the subcompact class did the actual inventory increase.

Here's how the inventory was split up on Sept. 1: Intermediate, 28.52 percent; compact, 26.63 percent; subcompact, 21.47 percent; standard, 13.89 percent, and luxury, 9.49 percent.

One month earlier, the shares were: Intermediate, 28.31 percent; compact, 27.71 percent; subcompact, 20.48 percent; standard, 14.15 percent, and luxury, 9.35 percent.

Subcompacts' days-supply figures on Sept. 1 were: EXP, 105; Charger, 92; Lynx, 92; Daytona, 91; Laser, 85; Escort, 81; Encore, 77; Horizon, 73; Omni, 73; Turismo, 62; Alliance, 58; Pontiac 1000, 58; Rabbit, 58; Chevette, 52; Fiero, 22, and Accord, 21.

Compacts were: Eagle, 131; Aries, 92; Camaro, 80; Reliant, 80; Tempo, 76; Cimarron, 73; Topaz, 73; Capri, 71; Firenza, 68; Firebird, 58; LeBaron, 58; Mustang, 57; 2000 Sunbird, 55; Cavalier, 14, and Skyhawk, 45.

Days' supplies of intermediates were: Citation, 120; Dodge 600, 85; Thunderbird, 83; Skylark, 81; Phoenix, 80; New Yorker E Class, 75; LTD, 71; Grand Prix, 60; Bonneville, 58; Pontiac 6000, 56; Cougar, 54; Monte Carlo, 47; Regal, 47; Celebrity, 45; Marquis, 45; Century, 40; Cutlass, 35; Omega, 33, and Ciera, 27.

Standard-size cars were: Diplomat, 81; Crown Victoria, 78; Pontiac, 69; Gran Fury 62; Grand Marquis, 62; Chevrolet, 57; LeSabre, 49, and Oldsmobile 88, 35.

Luxury-car supplies: Mark VII, 94; Corvette, 86; Toronado, 77; Eldorado, 69; Fifth Avenue, 65; Riviera, 64; Seville, 62; Continental, 56; Lincoln, 43; Oldsmobile 98, 32; Electra, 25, and Cadillac, 22.

New chief named to NHTSA office

WASHINGTON. — NHTSA's Office of Defects Investigations (ODI) is getting a leader after being without one for nearly a year.

Phil Davis, a career NHTSA engineer with experience in vehicle crash-worthiness technology, will soon be named to the position, thus taking over responsibilities handled on an interim basis by George Parker, now NHTSA associate administrator for enforcement. Davis, 43, has worked for the Department of Energy on its electric-car program.

ODI determines whether to open or close a defect investigation, whether a defect exists and the nature and extent of any recall order.

But Honda has only 2-day stockpile

Import stock cut to 23½-day supply

Continued from Page 1

when there were 24 days' worth on hand.

Total import-vehicle inventory—cars and trucks—stood at 259,865, down from 284,473 on Aug. 1 but up from the 256,486 of Sept. 1, 1983. Those numbers translate into a 25-day supply for Sept. 1; 27 days for the prior month and 26 days for the year-earlier figure.

By country of origin, Sept. 1 inventories were split this way: Japan, 61.38 percent; West Germany, 24.19 percent, and other countries, 14.43 percent. One month earlier, the split was Japan, 66.63 percent; Germany, 17.47 percent, and other countries, 15.90 percent.

Inventory levels of German makes climbed nearer to normal by Sept. 1, but sales rates during August were reduced by product shortages, especially at BMW and Porsche but also at Mercedes-Benz. Audi's days-supply number climbed from 37 to 78 chiefly on the basis of new shipments; its sales rate remained steady.

The inventory of new Japanese cars fell from month-earlier and year-earlier levels. Honda's imports on Sept. 1 hit an unbelievable low of two-days' worth. Its domestically produced Accords, however, stood at 21 days' worth. Combined, Honda's inventory was worth eight days—hardly better than Toyota's seven.

Both Mitsubishi and Chrysler Corp.'s Mitsubishi-built captive imports showed inflated supplies on Sept. 1 because of an influx of 1985 models.

Mitsubishi said that if stocks of its new Galant and Mirage were not included, it would show a 39-day supply. Those cars go on sale next month.

Similarly, about 55 days' worth of Chrysler's 86-day supply of imported cars were '85 models.

Alfa Romeo just about halved its Aug. 1 days-supply figure by halting shipments and increasing its sales. But IAI—International Automobile Importers, importer of the Bertone and Pininfarina—still had an estimated year's supply of cars on hand.

Japanese cars and their days' supplies on Sept. 1 were: Honda, 2; Toyota, 7; Subaru, 11; Chevrolet Sprint, 17; Nissan, 21; Mazda, 29, and Isuzu, 63. In addition, there was an 86-day supply of Chrysler imports, broken down this way: Dodge Conquest, 150; Plymouth Conquest, 130; Dodge Vista, 87; Plymouth Colt, 86; Plymouth Vista, 82, and Dodge Colt, 77.

Supplies of German cars were: Mercedes-Benz, 23; Porsche, 24; VW, 54; BMW, 75, and Audi, 78.

Other models and their days' supplies: Jaguar, 11; Saab, 19; Maserati, 36; Volvo, 39; Peugeot, 48; Alfa Romeo, 67; Renault, 135, and IAI, 379.

Makers build 162,793 for week

Car production highest in 3 months

By Louise Kertesz
Detroit Reporter

U. S. auto makers returned to full work schedules last week, and the production upturn was even stronger than might be expected in the week following a holiday.

Overtime at several plants contributed to the surge.

The makers scheduled 162,793 cars last week, the highest weekly total since the week ended June 9 when 164,341 cars were built.

Last week's total was a 40.79 percent increase over the previous week's 115,632 and was 8.75 percent above the year-ago week's 149,699.

Year-to-date, 5,624,718 cars have been assembled, 22.23 percent more than the 4,601,706 completed at this point last year.

Auto companies' shares of last week's estimated production were: General Motors, 57.46 percent; Ford Motor Co., 22.83 percent; Chrysler Corp., 14.87 percent; American Motors, 2.95 percent; Honda, 1.60 percent, and Volkswagen of America, .29 percent.

Showing significant gains in estimated weekly production over the previous week were Volkswagen, with a 277.95 percent increase, and GM, with a 53.80 percent increase in total cars produced and increases of 108.40 and 84.51 percent, respectively, for its Oldsmobile and Pontiac divisions.

GM scheduled two overtime shifts Saturday (Sept. 15) at its Flint facility, No. 4 and 40 (Buick). Lakewood (Ga.) and Lordstown (O.) also worked two shifts on Saturday.

The GM Norwood (O.) plant is down until September 24 for model changeover.

Ford plants in St. Louis and Wayne, (Mich.) also worked overtime Saturday.

Chrysler plants working two shifts on Saturday were Belvidere (Ill.) and St. Louis No. 2. Those plants are scheduled to work two nine-hour daily shifts this week.

NHTSA approves carryback if Ford earns '86 credits

WASHINGTON. — NHTSA Chief Diane Steed, in a letter to Ford Motor Co., said NHTSA will allow the auto maker to carry back 21,290,000 fuel-economy credits to help it meet its 1984-85 CAFEs for passenger cars — contingent upon Ford's actually earning those credits for 1986 models.

But NHTSA will not allow the 0.2-MPG adjustment proposed by EPA for test procedure changes.

This is "too speculative to be included in Ford's credit-earning plan at this time," NHTSA said. But when EPA makes a final decision, Ford can submit a revised plan and NHTSA will consider it.

Last May, Ford projected a 1984 CAFE for passenger cars of 25.3 MPG or 1.7 MPG lower than the standard on the assumption of a volume of 2,055,135 cars. On June 14, Ford revised its projection to 25.4 MPG or 1.6 MPG short, on an assumed volume of 2,036,704.

Japanese report month's exports

TOKYO. — Japanese makers exported 326,150 new cars in June, according to the Japan Automobile Manufacturers Assn.

By destination, leading countries were: U.S., 156,231; West Germany, 25,298; United Kingdom, 14,465; Canada, 13,716; Australia, 12,415; Netherlands, 8,187; New Zealand, 6,844; Austria, 6,760; Belgium, 6,352; Malaysia, 6,261, and Puerto Rico, 5,872.

Chrysler places Duster, Laser ads on MTV

DETROIT. — Advertising for the '85 Plymouth Turismo Duster and Chrysler Laser debuted on MTV Sept. 14.

Duster appeared in a 90-second rock video-style spot on the first "MTV Music Video Awards" which Chrysler-Plymouth co-sponsored.

Duster is aimed at 18 to 34-year-olds and the ad marks Plymouth's first entry into MTV. The ad has a fantasy, ethereal city-setting.

Duster theme is "Leave it all behind."

Chrysler Laser was featured in a separate 60-second spot emphasizing high-tech. Narration is by "Star Wars" actor James Earl Jones.

The Duster spots, made strictly for MTV, air on MTV's Friday Night Video Flights and on a scatter programming basis as well.

Truck production for week nears 66,000 units

Last week's domestic truck production continued recent steady gains.

U. S. truck makers projected completion of 65,912 units, a 22.99 percent increase over the previous week's 53,592 figure, which reflected the Labor Day holiday. Last week's expected total was 24.59 percent better than the year-ago week's 52,902.

General Motors scheduled two Saturday (Sept. 15) overtime shifts at its Janesville (Wis.) and Lordstown (O.) plants. The Pontiac facility also worked overtime Saturday.

Also working two overtime shifts Saturday was Chrysler Corp.'s Warren (Mich.) plant. The plant will operate two nine-hour daily shifts this week.

Year's car output in Canada tops '83 by 11 pct.

Canadian auto and truck production is maintaining its increased pace over last year.

Estimated car production of 18,055 units last week was 15.12 percent better than the previous week's 15,683 and 29.10 percent above the year-ago week's 13,985.

So far this year, Canadian auto makers have built 758,000 cars, 11.76 percent more than the 678,268 assembled last year at this time.

Canadian truck manufacturers targeted completion of 18,091 trucks last week, a 24.69 percent gain over the previous week's 14,509 units and 44.67 percent better than the 12,505 trucks built during the year-ago week.

Year-to-date, 570,435 trucks have been built in Canada, an increase of 55.28 percent over 367,363 at this time last year.

Chrysler Corp. expected to produce 2,358 Plymouth Voyagers, 2,346 Dodge Caravans and 936 Mini Ram Vans at its Windsor (Ont.) plant last week, bringing the total of T-115s completed this year to 158,364.

All workers expected back on job today

GM and UAW agree on 3-year contract

By Marjorie Sorge
Labor Editor

DETROIT. — General Motors and the UAW reached a tentative three-year settlement last Friday (Sept. 21) for 350,000 UAW-represented workers after about 16 hours of continuous bargaining and six days of selective strikes at 17 GM plants.

The UAW 11-member negotiating committee voted 10-1 to recommend the contract for ratification.

All striking workers are expected to be back in the plants today (Sept. 24).

Once the agreement is ratified by the 350,000 workers, the union will move its negotiations to Ford Motor Co., which was not picked as the target company and has had its negotiations on the back burner.

UAW President Owen Bieber had said he expects Ford to negotiate a pattern contract with the union based on the GM pact. Peter J. Pestillo, Ford vice president, labor relations, has said his company will look carefully at the GM document and will not necessarily agree to the pattern.

While details of the settlement are not to be released until a meeting of the union's 300-member GM Council this Wednesday in St. Louis, Bieber said the job security package would span six years. Bieber said earlier that the job security agreement must outlast the life of the agreement.

Job security was the union's number one demand in these negotiations.

Alfred S. Warren Jr., GM vice president, industrial relations, said GM will have no problem with the length of the job security package.

The contract also provides some language on job security, Bieber said.

Sources said the contract was front-loaded with an upfront wage increase and annual wage increase of 2.25 percent in one year of the pact. Lump sum payments are part of this package.

Also included are gains in pensions for both future and current retirees, a continuation of health-care benefits without co-pays or deductibles and the continuation of profit sharing.

Workers retiring at normal retirement age got $18.20 per month per year of service under the old contract. Those retiring early got $935 a month and it is believed that was increased to above $1,000 a month.

Earlier in the talks GM proposed a new health-care plan which allowed workers to choose from three options, Preferred Provider Organizations, Health Maintenance Organizations and the traditional plan.

The traditional plan would require authorization and review procedures to eliminate inappropriate utilization. The union found the basis of these proposals interesting and it is likely that the final settlement includes this type of plan. GM said it could save the company 10 percent a year. The cost in 1983 was $2.2 billion.

The current profit sharing formula is expected to provide GM workers with about $1,000 in 1984. According to one source, that represents a 6-percent economic increase for the workers. The 1983 payout was $660.

According to Bieber, one "sticking point" was the company's demand to change the cost-of-living-adjustment formula and divert COLA pennies to pay for some other benefits. He said the company and the union had arrived at an acceptable arrangement. It was not clear at presstime if the current $3.04 COLA was folded into the base wage of $9.63 an hour. That had been a UAW demand.

"It is an excellent settlement that makes more secure than ever in history the jobs of our UAW-GM members, while providing much-deserved economic improvements immediately and

Top of the line

Cadillac limo goes FWD

Downsizing in regular passenger cars has been the trend of the past few years, and this year, Cadillac introduces a downsized limousine. The Fleetwood Seventy-Five Limousine now is front-wheel drive. It is shorter and lighter than its rear-wheel-drive predecessor and it still carries eight. Story, other pictures are on Page 43.

Honda hits 54 MPG to top EPA rankings

By Jake Kelderman
Washington Reporter

WASHINGTON. — The Honda Civic Coupe HF, a long-legged version of that company's popular 1.5-liter CRX model, is the car to get in 1985 if you're after fuel economy.

The lightweight two-seater took top honors in the EPA's annual fuel-economy contest with a healthy 49-MPG average in city driving and a 54-MPG average in highway driving.

Not far behind came General Motors' new import from Japan, the Chevrolet Sprint, at 47 city and 53 highway.

Taking third-place in the fuel-economy derby was the Nissan Sentra, at 45 city and 50 highway.

The Ford Escort and Mercury Lynx shared fourth place at 43 city and 52 highway, while Chevrolet Chevette and Pontiac 1000 tied for fifth with 39 city and 46 highway.

Unlike past years, the EPA is reporting two numbers for 1985 and also unlike years past, it says most consumers can legitimately expect to get the kind of fuel economy shown. The agency has adjusted the city and highway numbers by factors of 10 percent and 22 perpercent respectively, to account for the real-world aspects of city and highway driving.

EPA said it made those changes in response to a study by the Department of Energy indicating that by reporting only dynamometer-tested fuel economy, the agency was undermining the confidence the people had in the fuel-economy numbers.

Meanwhile, for those not interested in fuel economy, the thirstiest cars available this coming year will be the Rolls-Royce Carmargue and Corniche, which consume gasoline at a 8 MPG city and 11 MPG highway clip.

The Rolls-Royce Silver Spirit is not far behind its sister cars, coming in second from the bottom with 9 city and 10 highway.

Rounding out the bottom five in the fuel-economy derby are: Jaguar XJ-S, 13 city, 17 highway; Mercedes-Benz 500-SEC and 500SEL, 14 city, 16 highway, and Jaguar XJ, 15 city, 19 highway.

Second shift, annual rate of 200,000 due by mid-1986

GM-Toyota car to roll at Fremont by year-end

By Matt DeLorenzo
Los Angeles Reporter

FREMONT, Calif. — Job 1 at New United Motor Manufacturing (NUMMI), the GM-Toyota joint venture, is expected to roll off the assembly line before the end of the year, according to Robert Hendry, general manager and comptroller.

"We are going to produce a car before Christmas," Hendry told Automotive News, adding, "In general, we are on schedule."

Construction at the Bay Area facility is expected to be completed next month and six to eight weeks of preproduction training and testing then will begin. Three hundred of the estimated 800 workers needed to start production have been hired.

By early 1985, as line speed increases, about 200 more workers will be added for single-shift production. A second shift is planned for late 1985 and by early 1986, when the plant is expected to reach capacity, NUMMI will have about 2,500 employes.

Hendry said NUMMI is aiming for production of 60 jobs an hour on the first shift by the end of 1985 and an additional 60 jobs hourly on the second shift by mid 1986, for an annual output of 200,000 units.

Although Job 1 is scheduled for December, production will begin slowly and output will build gradually.

• The gradual approach will give time for both management and workers to adapt to Toyota's production techniques. According to Hendry, under the Japanese system, "the focus is different. There's more of a common understanding, a consensus or coordinated approach. Everyone has input into policy. It takes longer to establish policy than to implement it."

He explained that while it may take longer to make policy because of everyone's input, "there's an ownership process" and it results in faster implementation.

Hendry said that approach differs from U. S. techniques, where a top few "will brainstorm policy and implement it over a long period of time. The difference in approach is subtle to some, but the impact is big."

As part of that consensus building process, nearly 200 workers will visit Japan to view how things are done in Toyota's Takaoka. To date, about 100 employes have participated in the program.

Sent in groups of 30, the U. S. workers spend three weeks in Japan learning company philosophy and production methods. Upon their return, Hendry said, each group has made a presentation to Tatsuro Toyoda, president of NUMMI, on what they have learned and suggestions on how the techniques they were exposed to can be adapted to fit the U. S. plant.

All the employes hired to date have undergone evaluation

GM shifting employes to EDS staff

By Dan McCosh
Detroit Reporter

General Motors Co. has begun transferring as many as 12,000 GM employes to EDS Corp., the Dallas-based data processing company GM is acquiring, AUTOMOTIVE NEWS has learned.

GM is quickly incorporating EDS into its internal data processing operations, charging it with developing standardized communications systems for the auto maker.

The unexpectedly quick implementation of EDS into GM's corporate structure has sent "shock waves" through the arcane world of GM's internal data processing department, say some insiders.

The moves are a signal that GM intends to rely heavily on its acquisition of EDS to solve its internal data-processing problems, particularly intracorporate communications.

The action also is an indication that GM's internal need for EDS' services is taking precedence over longer-range corporate goals to use the electronics acquisitions for corporate diversification.

Further GM acquistions in the electronics area also are expected to follow the same pattern—"buying" outside expertise initially for internal consumption, with a long-range strategy of GM entering computer-service strongholds as a competitor.

At the time of the announcement of its agreement with EDS, GM Chairman Roger B. Smith said it would result in the merger of GM and EDS communications facilities and personnel.

• EDS has been taking over duties formerly allocated to GM's internal data-processing centers at some 180 GM plants. GM employes often remain in their previous job, but now report to EDS, rather than the parent corporation.

Some transferred GM employes reportedly are taking pay cuts and losing some GM fringe benefits and will be working under EDS' traditional performance-oriented compensation program.

The data-processing centers are responsible for handling the mass of financial data and information generated by GM com-

First ASC-Toyota ragtop

Yukiyasu Togo, president of Toyota Motor Sales U.S.A., Inc., drives the first Toyota Celica GT-S convertible with Heinz Prechter, chairman and president of ASC. A minimum of 5,000 of the Celica models will be completed at ASC's new $5-million plant in Dominquez Hills, Calif. The new model marks a joint effort between Toyota Motor Corp. in Japan and ASC, which is headquartered in Southgate, Mich.

Boost on options slashed

Second effort by Ford pares hike to $153

By John K. Teahen Jr.
Managing Editor

Ford Motor Co. took a second look at its preliminary prices of '85 cars and optional equipment and decided it should try a little harder.

The result: Ford now says its '85 prices will be up an average of $153, or 1.3 percent, over the final figures for comparably equipped '84 models. Earlier, Ford had posted a preliminary boost of $225, or 1.9 percent.

The $72 difference in the average came out of optional equipment. Ford had originally planned to boost option prices an average of 2.5 percent. Now, it says the average price of options is unchanged. Not every option bears the same price as last year, but the average hasn't gone up appreciably.

The $153 hike for '85 consists of $152 on the base cars and $1 for equipment. Ford gave no breakout on the $225 preliminary increase, but it apparently included a little over $70 for optional items.

Ford's boost compares with $292, or 2.3 percent for General Motors and a tentative hike of $181 or 1.7 percent for Chrysler Corp. All, of course, are subject to review — and further increases — when GM and Ford finalize new contracts with the UAW.

Those increases are on comparably equipped cars which means that in many cases the boosts in actual sticker prices are considerably larger. In the "comparably equipped" method, makers adjust last year's price to include any equipment that is made standard for the new season. The amount of those adjustments is not included in the price hike announced by the makers.

• Some Ford Motor dealers were highly displeased with the preliminary prices, especially the large hikes on such strong-selling lines as Ford Thunderbird and Crown Victoria and Mercury Cougar and Grand Marquis.

Those dealers will be even more displeased with the firm prices. T-bird, Cougar and the Ford-Mercury big cars are up $38 to $199 more than they were in the first go-round. The two-stage hikes amount to $626 to $684 on Thunderbird and Crown Vic and $682 and $675 on Cougar and Grand Marquis.

Lincoln dealers fared better. The firm prices of their cars are not as high as the preliminary prices. The Continental dipped $28 from the preliminary price, the Town Car went down $193, and the Mark VII fell $232.

Nevertheless, the stickers on those autos are still a lot fatter than they were for '84. The year-to-year hikes are $704 on Mark VII, $816 on Continental and $988 on Town Car.

Ford Motor was able to hold its overall boost to an average of $153 by keeping a tight rein on the prices of small cars. The company said that of 62 small-car models, 34 have been re-

Going after younger prospects, import owners

Buick sales target: One million plus

By Jenny L. King
Staff Writer

ROCHESTER, Mich. — With his pen poised above the model-year sales record book, Buick General Manager Donald E. Hackworth promised sales exceeding one million new cars for his division in 1985.

"If we don't beat one million, I'll fall on my sword," Hackworth told reporters at the national press preview of Buick's 1985 lineup at Meadow Brook Hall here.

"Sales have been records nine out of the past 11 months and in May we set an any-month sales record," said the man who assumed Buick leadership last January. "We expect a minimum of one million sales for 1985."

Sales for the 1984 model year, ending Sept. 30, are expected to reach 945,000.

The star of the show, however, was Buick's all-new Somerset Regal. The front-drive sport coupe, which is going up against such high-line imports as Toyota Celica, Datsun 200-SX, Honda Prelude, the BMW 318i and the Audi Coupe, will be to the Skylark/Century models what the Riviera is to the LeSabre/Electra, according to Chief Engineer David Sharp.

Somerset Regal's corporate counterparts are the Oldsmobile Calais and Pontiac Grand Am. All are being assembled in Lansing.

The Buick officials described the Somerset Regal as "the most researched car we've ever produced."

Adding the Somerset to an expanded lineup which ranges from the compact Skyhawk to the front-drive Electra and luxurious Riviera, the division is honing its troops — dealers and their sales forces — in a bid to win new customers while keeping current owners in the fold.

For "new" customers, read "younger." Buick was long considered a doctor's car: A car to be owned when one had worked many long years and had arrived at a comfortable station.

John Dabels, Buick marketing director, said recent non-product strategies — being the official car of the 1984 Olympics and the 1983 Indy pace car — have helped build a younger, performance-oriented image.

Another marketing target, which includes older and young-

Olds aims at record this year, again in '85

By Kathleen Hamilton
Assistant Managing Editor

ORCHARD LAKE, Mich. — Oldsmobile expects to sell 1,363,000 cars in the 1985 model year, 21 percent more than the record 1,130,000 it anticipates it will sell by the end of this model year.

Its top-selling nameplate for '85 is expected to be the front-drive Cutlass Ciera. At 400,000 projected sales, it would upstage perennial best seller, the rear-drive Cutlass Supreme, at 280,000 sales projected for 1985.

Last year, the Supreme was the best-selling U. S. nameplate; this model year, with forecasted sales of 337,000, it is again a strong contender for the top spot.

Oldsmobile has refined its plans for its sporty exclusive model, and it now plans to bring it out at the end of the 1987 calendar year, General Manager Joseph J. Sanchez told AUTOMOTIVE NEWS following the press introduction of 1985 models here.

"We've become a little bit more demanding. We want a world-class competitor," he said.

The timing coincides with planned introduction of a 16-valve, four-cylinder engine that Oldsmobile will produce in what is now its Delta Township diesel-engine plant, near Lansing (AUTOMOTIVE NEWS, Sept. 17).

But Oldsmobile executives stressed that the new, high-performance engine will be applicable to a wide range of cars. They refused to say which models it will go in.

Oldsmobile will be pitching its new Calais to the 25-to-44-year-old crowd through some appropriate print buys, including Road & Track. Oldsmobile's average customer now is 49 to 50 years old, said Lynn C. Myers, director of marketing.

• Auto sports will play a more important part at Olds in the next few years, Sanchez said.

"Other corporations and divisions have done more, and we plan to close that gap. But we will not project Oldsmobile as a hot-rod division,' he said.

True to its marketing intent, the new Calais has a firmer ride than a traditional Oldsmobile.

Sanchez stressed that it is not a replacement for the Omega, even though it will be sized close to the X-car that has been dropped. The Omega was more a family car; Calais is more a personal car, he said.

The division hopes to sell 144,000 Calais coupes next model year, more than Buick and Pontiac N-car sales, Sanchez said. A sedan will debut in 1987.

Initially, production will be split evenly among the three divisions. To date, 10,000 Calais

New heights

A giant crane was used to lift this 1985 Oldsmobile Calais from the dock up to the Queen Mary's aft deck (an approximate six-story lift) for a news conference at which the automotive press corps had its first view of the new model.

Honda observes fifth anniversary of U.S. outpost

MARYSVILLE, O.—Honda of America Mfg., Inc. has observed the fifth anniversary of the start-up of its U. S. production activities.

The company has produced 215,000 motorcycles and 133,000 Accords during the past five years. Today, Honda's total U. S. manufacturing investment approaches $600 million.

Following the start-up of its motorcycle operation, Honda began production in 1982 of the Accord models.

The automobile facility is being expanded for the future production of the Honda Civic beginning in 1986. This expansion will bring total U. S. output to 300,000 Accords and Civics per year in 1988.

Registrations for 7 months set new mark

Seven-month registrations of new trucks of all types in the U. S. hit an alltime high, with sizeable increases in all eight weight classifications.

Through July, according to R. L. Polk & Co. statistics, 2,307,582 light, medium and heavy trucks

Table on Page 44.

were registered, an increase of 42.1 percent over last year's 1,624,008.

The previous record for the January-July period was established in 1978 with 2,252,682 registrations. This year's total was 2.4 percent higher than the count six years ago, when industry sales and registrations hit peaks.

Light-truck tallies for the seven months totaled 2,174,290 units, a gain of 41.9 percent over the year-earlier 1,513,850. In the like period in 1978, the light-truck count was 2,056,423 units.

Through July, 27,126 medium trucks were registered, an increase of 15.2 percent over last year's 23,543, but far below the 88,550 units tallied in the corresponding period six years ago.

The seven-month heavy-truck total was up 54.7 percent to 106,166 units, compared with 68,615 a year ago. In the like period in 1978, the count was 107,709. The high for the period was reached in 1979, with 125,502 units.

Group 1 registrations totaled 1,236,353 through July, up 44.8 percent from last year's 853,958, the previous high for this classification. Six years ago, the

Not quite minivan, not quite limo

Artist Mark Stehrenberger's sketch of the luxury vehicle designed by Alain Clenet that is scheduled to be introduced by Lands Motors, Inc., at the NADA show in February. Although it looks like a minivan, the vehicle will serve as a limousine/luxury auto.

Clenet, Lands design a minivan-limo vehicle

By Kathleen Hamilton
Assistant Managing Editor

A $40,000 luxury vehicle that combines the styling of a futuristic-looking minivan with the function of a limousine is scheduled to be unveiled at the NADA convention in February.

Precedent, as it will be called, could indeed set a precedent in the custom-car industry, which has been groping for a hot item ever since high-priced neoclassic cars—styled after cars of the '20s and '30s—fell in demand.

Indeed, the Precedent's designer is the same Alain Clenet that started the neoclassic wave with the Ford-based roadster that bore his name.

For the Precedent, his design collaborator is Mark P. Stehrenberger, noted automotive artist. Dick Gulstrand is chassis consultant.

Builder, and the man who commissioned the Stehrenberger-Clenet team, is Fred L. Lands. Lands Design, Elkhart, Ind., already produces what Lands says is the most expensive van conversion, producing vehicles that sell for up to $28,000.

• Precedent won't be a conversion, he stressed. It will use the front suspension of the Chevrolet S-10 pickup truck, drivetrains of the Chevrolet Camaro and Lincoln Continental, doors and frames of a Citroen automobile, and chassis and body panels unique to the Precedent.

It is to be a front-engined,

★—New York and Oklahoma for 1984 compiled from manufacturers' sales records; no registrations for Oklahoma, 1983; Louisiana, July, 1984.

HD registrations for seven month 2nd-highest ever

Registrations of new heavy trucks in the U. S. in the first seven months of 1984 were the second-highest for the period in industry history.

According to R. L. Polk and Co. statistics, 106,166 Group 7 and 8 units were registered through July, a 54.73 percent increase over the year-ago 68,615 units.

The alltime high for the January-July period was achieved in 1979 with 125,502 Group 7 and 8 tallies. This year's total was 15.41 percent behind that pace.

July tallies totaled 17,600 units, a gain of 67.36 percent over the 10,516 registered in the same month a year ago.

Registrations of Group 7 trucks through the first seven months totaled 36,386, up 32.84 percent over the 27,390 units registered in the year-earlier period.

The Group 8 count through July was 69,780 units, up 69.27 percent from the year earlier 41,225.

recreation on wheels

Total up 18.2 pct. to 224,200 units

6 month RV shipments top '83 in spite of a sag

First-half shipments of recreation vehicles from manufacturers to dealers were almost 20 percent higher than a year ago in spite of a cooling in wholesale activity that started in the second quarter.

The Recreation Vehicle Industry Assn. reported that manufacturer/members delivered approximately 224,200 units in the January-June period, an increase of 18.2 percent over the year ago 189,700 vehicles.

While June shipments were up slightly from the same month in 1983, they were down from those in March, April and May.

During the month, according to RVIA, dealers received approximately 37,100 units, an increase of 2.2 percent over the year-earlier 36,300. Manufacturers shipped 40,000 RVs in May, 44,000 in April and 41,600 in March.

However, a spokesman said, "retail sales continue to grow and have now exceeded wholesale for the first time this year as dealers begin inventory adjustments sensitive to rising interest rates."

The Index of Consumer Sentiment declined slightly in June to 95.5, but Dr. Richard Curtin, survey director, said "it still remains at a very favorable level."

• He said the small decline from the record level of 101.0 recorded in March "does not detract from the overall favorable consumer-sentiment readings.

"Consumer buying decisions have been and will continue to be very responsive to interest-rate trends, but the sustained strength in personal finances points toward continued high sales levels through 1984 and into early 1985," he added.

Factory shipments for the first six months were higher in all seven market segments, but lower in four of them in June.

Motorized equipment scored the biggest percentage gains in the January-June period.

Through June, shipments of all types of motor homes were up 38.9 percent to approximately 47,500 units, compared with 34,200 in the like period a year ago.

Manufacturers shipped 22,700 conventional (Type A) motor homes in the first half, a gain of 42.8 percent over last year's 15,900. Chopped vans — mini, low-profile and compact motor homes — were up 32.5 percent, 20,400 versus 15,400.

Deliveries of van campers (Type B) totaled 4,400 through June, an increase of 51.7 percent over the year-earlier 2,900.

RVIA defines the van camper as a panel-type truck to which the RV manufacturer adds any two of the following conveniences: Sleeping, kitchen and toilet facilities, 110-volt hookup, fresh-water storage, city-water hook-up, and a top extension to provide more headroom.

In the first half, manufacturers delivered 93,000 multi-use vehicles, a gain of 15.4 percent over the year-ago 80,600 units.

A multi-use vehicle, according

ElDorado sales, earnings reach peak in fiscal '84

MINNEAPOLIS, Kans. — ElDorado Motor Corp. reported record sales and earnings from operations for the fiscal year ended June 30.

Sales rose 71 percent to $53.3 million, versus $31.2 million a year earlier. Earnings increased to $1.2 million from $647,000 before $896,000 of tax credits and other extraordinary items a year earlier.

ElDorado manufactures small buses and a line of motor homes.

Robert L. Stewart, ElDorado president, said the company's strategic planning and timely capacity expansion in fiscal 1984 were key reasons for the record results.

"Last year, both our bus and motor-home unit volume grew more than 50 percent," he said.

Continental Shelf enhances payload access

Hacke Enterprises, Inc., Chico, Calif., has introduced the Continental Shelf, a device it says "greatly enhances payload access, particularly for pickup trucks with camper shells." The shelf, available in lengths of 6 and 8 feet, fits any width pickup bed and is easy to install, the firm says.

By Lead Industries Assn.

Development of electric car traced

NEW YORK. — "Where in the world is the electric car?"

The question is posed often, and with merit. The educated answer is that the electric car is everywhere — in Detroit, in London, in Tokyo and in other world energy and transportation hubs.

Yet to the lay person, the answer is that the electric car must be nowhere because few of them can be seen on city streets, according to Lead Industries Assn., Inc. (LIA), based here.

"Where in the world is the electric car?" is also the query addressed by Joe D. Hall, acting deputy assistant secretary for conservation at the Department of Energy, which administers the U.S. Government's various electric vehicle programs.

Hall's assessment of the situation is decidedly more optimistic than that of the general public, a growing portion of which is beginning to question whether electric vehicles will again be commercialized as they were early in this century, before the advent of the internal combustion engine.

Yet lead batteries should again be at the heart of EVs if they are revived.

"Clearly, reduction of oil consumption, flexible energy systems and energy options apply to electric and hybrid (electric/IC combination) vehicles," Hall said.

This is in line with current U.S. energy policy, where the strategy is twofold:

1. To minimize federal control over, and involvement in, energy markets while maintaining public health, safety and environmental quality.

2. To seek a balanced and mixed energy resource base from both conventional fuels (oil, gas, coal, nuclear) and renewables such as hydroelectricity, solar, wind, geothermal and biofuels. And, of course, conservation in general.

• The essential thrust of today's U.S. energy policy is to reduce dependence on unreliable sources of energy.

LIA and Hall agree that the "electric" car means the "battery-powered" car, and it appears to be the ideal way to link the principal consumer of petroleum in the transportation sector to the nation's existing capability to generate abundant energy from alternate resources.

The foregoing is also supported by DOE statistics that break down transportation sector petroleum consumption by vehicle category. In 1980, cars and light trucks consumed 65 percent of the petroleum used in transportation. The corresponding figure for the year 2000 is projected to be 53 percent.

Meanwhile, over the past 10 years, the total amount of energy consumed in generating electricity has held constant at around the energy equivalent of 10-11 million barrels of oil per day, but the fraction of this energy input from petroleum has dropped from 17 percent in 1973 to less than 7 percent in 1982, LIA said.

Cognizant of the fuel flexibility inherent in battery-powered vehicles, and having just gone through the energy crisis of the early 1970s, governments around the world intensified their searches for alternative sources of energy, especially for transportation.

In the U.S., Congress enacted the Electric and Hybrid Vehicle Research, Development and Demonstartion Act of 1976.

This act established the electric and hybrid vehicle programs within DOE to "encourage and support accelerated research into, and development of, electric and hybrid vehicle technologies."

• Congress and the Administration continue to support this law, although at reduced funding levels from prior years. Nevertheless, a large part of the funds earmarked for this program are being allocated to energy storage systems — particularly battery systems and, specifically, lead acid battery systems.

According to Hall, the DOE's battery/propulsion system R&D has determined that, despite the advent of "advanced" technologies continuing improvements in the lead acid battery make it a viable candidate both for near-term and long-term use in electric vehicles.

Hall conceded that electric vehicles may remain in the R&D phase until near the turn of the century, but he also urged the public to consider recent developments aimed at bringing electric vehicles to market.

Following is a summary of

Olds' Dallas zone gains top spot

DALLAS.—Oldsmobile's Dallas zone has gained the top spot in the U.S. in market penetration, according to R. L. Polk Co.

Polk's report, based on the first six months of 1984, reflects sales throughout the entire zone, which includes Oldsmobile dealerships in East Texas, the southern half of New Mexico and three stores in the Shreveport, La., area. Oldsmobile has 27 zones in the U.S.

The zone's strong showing "was aided by the fact that Oldsmobile is number one in sales and registrations in the metropolitan areas of both Dallas and Fort Worth," said Bill Thompson, zone manager.

some of these developments:

In the U. S., 1983 witnessed the delivery to DOE by General Electric Corp. of HTV-1, a hybrid designed to utilize a lead-battery-powered electric motor in conjunction with a four-cylinder gasoline engine.

It is now undergoing testing at the Jet Propulsion Laboratory in Pasadena, Calif., and is said to offer unlimited range owing to the IC option. Other battery types are also being tested in HTV-1.

Field testing and evaluation of various electric vehicles and off-the-shelf and prototype components by DOE site operators (in both public and private sectors) around the country have resulted in the gathering of data that is spurring additional work.

• At present, DOE is planning to install new gelled electrolyte lead acid batteries in a number of site operator electric vehicles for road testing. Gelled electrolyte cells have displayed encouraging performance, cycle life and maintenance characteristics in laboratory tests, LIA said.

Important electric vehicle programs outside the federal DOE program are steadily advancing, the association said. Those of the independent Electric Power Research Institute, Palo Alto, Calif., were cited as prime examples.

A recent private sector initiative has been the formation of Electric Vehicle Development Corp., basically a group of electric utilities that are aggressively promoting electric vehicles in various ways.

One key member of the new organization, Detroit Edison Co., is already operating an electric car service center.

Elsewhere in the world, Hope Automobil Industri A/S, Hadsund, Denmark, plans to begin mass-producing the Hope Whisper by the end of 1984. It is a small electric passenger car with room for two adults in the front, two children in the rear and a reasonable amount of luggage.

The Whisper has demonstrated a range of up to 60 miles on a single eight-hour charge and has attained a top speed of about 48 MPH. Hope said the Whisper can reduce driving costs by two-thirds compared with conventional IC passenger cars.

The company expects to make 2,000 of the vehicles in the first year of production and 10,000 by 1987. Reportedly, the Whisper will be marketed worldwide, with considerable sales expected in the American market. It will be priced at about $6,000.

Hope recently announced an agreement with American interests to ship up to 226,000 of the cars to the U.S. over several years.

In the UK, the Batford Escort electric van is meeting with "predictable" success, LIA said. One was acquired recently by England's Eastern Electricity Board.

With an on-board charger, the Batford Escort cruises at 40-50 MPH, attains a top speed of 60 MPH, and has a range of about 44 miles between charges, LIA said. A number of similar light utility vans are being produced in Britain for the European market.

Meanwhile, Britain's Sinclair Vehicles, Ltd., plans to produce at least 100,000 so-called "electric runabouts" (three-wheelers) beginning in 1985.

Finally, LIA said, "Such formidable European auto industry names as Mercedes-Benz, Peugeot and Alfa Romeo are designing battery-powered cars that are expected to reach the European and/or U.S. markets within the next year or two. So are at least two Japanese auto makers."

NHTSA denies 4 petitions on possible safety defects

WASHINGTON.—NHTSA has denied four safety defect petitions filed by private citizens.

The first petition asked NHTSA to determine whether 1975-76 Fiat 124 cars contained the same rust defect that led to a manufacturer's recall of 1970-74 models.

The agency said it had received only 10 complaints on the 1975-76 models and concluded that Fiat's improved rust protection after 1974 made a safety defect in later cars unlikely.

A defect proceeding on alleged timing-belt failure in 1981-82 Ford Escort and Mercury Lynx cars was denied by NHTSA.

Although Ford Motor Co. has moved to extend its warranty coverage on the timing belts, has agreed to cover engine repairs associated with timing belt failure and has improved its timing-belt material, NHTSA found that the timing-belt problem did not constitute a safety hazard.

Transaxle lockup, loss of power steering assist, electrical system failures and excessive engine oil consumption were alleged in a third petition involving a 1978 Plymouth Horizon. However, NHTSA ruled that these problems did not constitute likely safety hazards and denied the petition.

The fourth petition asked for an investigation into an alleged defect on 1983-84 Ford F-250 HD pickup trucks.

The petitioner complained that the location of the upper torso restraint would cause a blister on the occupant's neck because of the reel location. NHTSA examined the problem using four adult males of different heights and weights, but observed no interference between the neck and belt.

More respect, more bucks

Marketers shed Dangerfield complex

By Joseph Bohn
Marketing Editor

Automotive advertising and marketing have definitely shaken their Rodney Dangerfield complex. They're getting more than the normal amount of respect from companies such as General Motors which are trying to come to grips with marketing in all of its ramifications and complexities.

Moreover, more advertising/promotional dollars are being pumped into various media as the domestic auto industry, particularly, strives to explain its updated products and the new high-tech image that goes with them.

With fewer sales stimulators, like consumer rebates and dealer incentives, required these days, auto companies also have more money to polish their images.

In 1983 the six domestic manufacturers (GM, Ford Motor Co., Chrysler Corp., American Motors, American Honda and Volkswagen) spent a hefty $1.6 million in advertising and promotional expenditures, about $200 million more than the previous year, according to Advertising Age estimates.

As usual, General Motors outspent everybody by pretty wide margins. GM's expenditures jumped 8.2 percent to $595.3 million in 1983.

Most of GM's expenditures rose fairly uniformly in the U. S., except for network TV. It jumped a sharper-than-average amount, reaching $201.4 million from $164.3 million the previous year.

Magazines recorded a modest gain to $89.0 million from $86.1 million in 1982, while newspaper expenditures jumped to $88.6 million from $82.0 million in 1982.

Among car divisions, Chevrolet increased spending to an estimated $178 million from $155 million in 1982, as it staged a strong comeback in the marketplace.

Chevrolet's biggest expenditure, network TV, jumped to $93 million from $76 million the previous year.

Buick outlays were similarly up, reaching $48.6 million in 1983 against $43 million the previous year. There were major increases in magazines (to $10.6 million from $7.9 million) and network TV (to $17.8 million from $13.7 million), according to Ad Age.

Oldsmobile's measured ad spending decreased to $45.5 million from $48 million in 1982. Declines came in every category except network TV which rose to $12 million from $9.6 million.

Pontiac's image-building campaign cost only slightly more—$55 million against $52.8 million in 1982. The largest gain was in spot TV which increased to $10.8 million from $8.9 million the previous year. Network TV dipped to $19.7 million from $20.5 million.

Cadillac ad spending increased slightly to $22.5 million from $21.6 million in 1982.

GM, of course, advertises through a number of other divisions such as the Truck & Bus Group, AC-Delco, Delco Electronics, GM Parts and GMAC.

At Ford Motor Co., Ford Division spent $210.9 million, up 39 percent from the previous year. Measured spending included $148 million on TV, up 38.3 percent. Magazine spending more than doubled to $19 million from $9.2 million, and spot radio dropped to $14.6 million from $17.6 million in 1982.

Lincoln-Mercury, meanwhile, increased spending by 34.5 percent to $74.8 million, TV showed the biggest increase to $53 million, up 33.5 percent. Magazines climbed 30.4 percent to $18 million.

At Chrysler Corp., network TV garnered $84.2 million of the budget, up from $68.2 million in 1982. Magazines grabbed the second-highest, $44.8 million, up sharply from $25.6 million in 1982. Newspapers came in third with $31.8 million compared to $29.6 million the previous year.

Volkswagen made magazines

Panel predicts rising sales in 1985

Composite forecast is 10.8 million cars and 4.0 million trucks

By Michelle Krebs
Financial Editor

New vehicle sales in 1984 are turning out better than expected and should be even better in 1985, according to top market analysts and economists surveyed by AUTOMOTIVE NEWS.

After analysts were caught being overly optimistic in their forecasts for 1983, the first year of the upswing, they appeared to play it more conservatively when asked about 1984 new vehicle sales in the U. S. at this time last year. All ultimately updated their 1984 forecasts during the year.

In September last year, estimates made by the panel of analysts and economists averaged out to a 13.8 million vehicle year—10.3 million car and 3.5 million truck sales.

The updated composite for 1984 now stands at 14.5 million —10.6 million cars and 3.9 million trucks.

The analysts say many of the factors that caused 1984 to be better than they anticipated will continue to play a major role in making 1985 an even better year.

For 1985 their composite forecast is for a 14.8 million unit year—10.8 million cars and 4.0 million trucks.

The analysts' forecasts range from a low of 13.8 million total units to 15.9 million. For car sales only, estimates range from 10.2 million to 12.0 million. The lowest estimate for trucks is 3.5 million while the highest is 4.5 million.

The analysts and economists agreed the general economy in 1984 rebounded more than they anticipated.

Perhaps most important, consumer confidence stands at its highest level in years.

"Consumers are feeling better about their employment situation. They are feeling better about committing to four years of monthly payments," said Harvey Heinbach, auto analyst for Merrill Lynch Pierce Fenner & Smith Inc.

Arthur G. Davis, auto analyst for Prescott Ball & Turben, agreed: "They've been employed again and have had time to build reserves."

Interest rates have remained relatively stable, with the ups and downs not seriously impacting monthly payments on car loans, and gasoline prices have dropped.

Keller

In addition, the rate of increase in the consumer's income has increased faster than the rate of car price increases, causing the real cost of an automobile to fall, said Philip Fricke, auto analyst for Goldman Sachs.

"The latent demand for automobiles from four years of a depression asserted itself stronger than anticipated," noted Arvid Jouppi, of Detroit's Arvid Jouppi Associates Inc.

Also, a strong truck market contributed to the rebound in the auto industry in 1984 and should continue in 1985.

The success of mini-vans, included in the truck segment, surpassed expectations and has prompted forecasters to up their prediction for future truck sales as more manufacturers enter the mini-van market.

Mini-vans, noted Davis, seem to have created a new niche in the market.

"The real test of mini-vans will be when GM's are on stream," he said. "If there's good market, this vehicle should expand the market as opposed to slowing down traditional truck sales."

Davis added the truck segment seems to be attracting a new kind of buyer. The consumer who previously purchased a high-performance, sporty car has turned to, for example, a four-wheel-drive truck, as the price of sports cars has soared.

Japanese manufacturers, who have been restricted on the number of cars they ship to the U. S., have focused their attention on the truck market.

They have initiated aggressive price promotions on light trucks, making the light-truck segment one of the few places in which there is serious price competition, noted Maryann Keller, a former auto analyst who now is a director for Vilas-Fischer Associates. Inexpensive light trucks have replaced subcompact automobiles as basic transportation, she said.

In addition, the truck segment has benefited from increased capital spending by corporations and small businessmen.

As for 1985, analysts and economists see the trends of 1984 rolling into the next year. They see little to veer the economy from the course charted in 1984—at least for the first half of 1985.

Fricke, of Goldman Sachs, said the consumer will play an even more important role in 1985 than in 1984. For the past two years, the commercial purchase of vehicles for fleets has accounted for the biggest portion of purchases, leaving plenty of room for the individual consumer in 1985.

Consensus of the analysts on voluntary import restraints on Japanese automobiles is that quotas will be lifted—either completely or, at the very least, liberalized substantially. All see the Japanese holding the line on the number of cars they ship to the U. S., since the threat of some kind of local content legislation will continue to loom large over the next year and would only be spurred along if the U. S. market were flooded with Japanese imports.

The analysts see Japanese auto makers shipping 200,000 to 300,000 additional cars to the U. S. next year, increasing Japanese imports to 2.1 million to 2.3 million a year and boosting market share a few percentage points to about 26 percent.

That means, with the addition of more Japanese companies producing cars in the U. S. along with increased imports, the traditional domestic auto companies may not necessarily enjoy the boom of 1985. Analysts predict Ford and, even more so, Chrysler, will be most vulnerable to losing market share to the imports.

Beyond 1985 there is little agreement among the analysts and economists.

Some are placing what they think is an inevitable downturn in the economy as early as the end of 1985, but certainly by 1986.

Others see the boom continuing a couple years beyond next year, though not to the degree of 1985, which all say will be the peak year.

Jouppi contends the simple fact that the American automobile fleet continues to be one of the oldest ever and the fact that baby boomers, growing older and more affluent, will be an even more important force in the market are reasons enough to believe the boom will not end after 1985.

For 1986 the analysts' composite forecast is for a year much like 1984 in numbers—a 14.3 million unit year with cars totaling 10.5 million and trucks at 3.8 million.

Forecasts range from a low of 13.1 million units to a high of 15.7 million total units. For cars the lowest estimate is for 9.3 million with the highest at 11.6 million. For trucks the low end of the range is 3.0 million to a high of 4.7 million.

Only four of the nine analysts and economists surveyed would venture beyond forecasting 1986.

The composite for 1987 was for 14.7 million total units with a composite of 10.8 million cars and 3.9 million trucks. Individual forecasts varied substantially from Maher's 13.9 million total (10.2 million cars and 3.7 million trucks) to Jouppi's 15.2 million total (11.7 million cars and 3.5 million trucks). □

Sales up 17 percent

New-car sales in the U. S. in the first eight months of 1984 numbered 7,185,408, up 17.59 percent from 6,110,701 in 1983. Domestic sales for those eight months were up 24.56 percent, to 5,533,924 from 4,442,778. Imports slipped behind '83 by 0.99 percent, to 1,651,484 from 1,667,923.

Ad spending

Continued from Page E-1

their dominant media with $37.9 million compared to $28.6 million the previous year.

Network TV was off slightly with $22.2 million against $23.0 million the previous year. Spot TV jumped to $16.9 million from $17.2 million in 1982.

Newspapers tallied $9.9 million, down from $16.0 million in 1982.

American Motors spending, which soared sharply to $100.8 million, included $51 million for network TV. That was nearly double the $26.0 million AMC spent on network TV in 1982. Magazines stayed about even with $15.6 million against $15.7 million in 1982. Newspapers were $8.3 million against $6.0 million the previous year.

American Honda expenditures included $41.5 million for network TV, up sharply from $29.9 million in 1982. Magazine spending also jumped sharply to $19.9 million from $15.5 million in 1982. Newspapers climbed to $8.0 million from $7.0 million the previous year. □

Import advertising spending continues to increase, though not at the rate it would if there were no Japanese car quotas in the U.S. See story on Page E-38.

Network TV cashes in

Pontiac pours 80 pct. of ad dollars into it

By Joseph Bohn
Marketing Editor

Network TV viewing may be off because of lackluster programming, competition from cable and a surfeit of sporting events—but some Detroit automotive divisions, flush with cash, are pitching more money into it nonetheless.

Pontiac is probably the extreme example of a division spending a disproportionate amount of ad dollars in network TV.

About 80 percent of the General Motors division's dollars are going into the medium. Charlene Curry, Pontiac advertising manager, believes TV's the most effective way to dramatize the sporty/performance "excitement" image Pontiac's seeking to promote.

It might be purely coincidence; but during the late '70s/early '80s Pontiac consistently spent a larger proportion of money in TV than its sister GM divisions—and its sales steadily worsened.

Last year it moved into print with Fiero in a big way, and had a very successful launch and a very good sales year.

Officials, though, are reportedly impatient with how quickly Pontiac's image transformation is going over, and feel TV will do it faster than other media.

It will be interesting to see how Pontiac's ad strategy pays off in terms of sales in '85.

Meanwhile, American Motors plans to become a "more consistent" network advertiser this fall with a solid slate of prime time and sports every week, straight through to January, according to David Kerr, director of advertising and marketing planning.

AMC at least partly is responding to criticism by dealers of its on again/off again TV advertising in the past.

• Detroit is churning out record profits this year. Generally everybody has more money to spend. And they're doing more image-polishing in contrast to the recent recessionary years where they had to focus on hard sell.

So TV, rather than print, which helped carry Detroit through its economic tough times, is getting the nod.

Chevrolet is a biggie that is delaying a lot of print in the fourth quarter. The GM division verbally ordered gatefolds and special units which it is delaying until late in the year or the beginning of 1985.

Chevrolet's delays are partly the result of extended buildout (and later introduction) of some smaller cars for CAFE purposes. Strike concerns may have also been a factor in their delay.

Chevrolet is shifting more money into prime time and ABC's "Monday Night Football," and cutting college football where it's been a traditional leader.

Chevrolet is cutting by half its sponsorsihp of ABC's telecasts of the College Football Assn., according to Lou Schultz, executive vice president and media director at Campbell-Ewald.

Chevy's buy on CBS's college games continues at four 30-second spots and halftime billboard sponsorship, but its dollar investment dropped sharply because the cost of college football time has fallen by over 50 percent.

In cable Chevrolet will have only about 50 percent of the college football investment it had the past several years, when

AMC: Bigger budget, more prime time TV

Variety of new ad programs boosts spending 10 to 15 percent

CJ-7 print ads rely heavily on skillful photography depicting rugged individualists in picturesque outdoor settings and use of a single line of copy: "Only in a Jeep."

By Joseph Bohn
Marketing Editor

SOUTHFIELD, Mich.—American Motors is stepping up advertising spending in '85 with a variety of new programs and a more consistent TV presence.

"We'll be a heavy prime time TV advertiser every week" between September and Christmas, noted David Kerr, director of advertising and marketing planning.

Heavier TV also includes ESPN Saturday night football, plus MTV. Magazine has been increased with a new college program. Meanwhile, AMC is also pumping lots of money into its dealer association co-op program.

All this adds up to a 10 to 15 percent increase in spending, Kerr said.

Generally, price/value are still the themes for Renault Alliance and Encore subcompacts. Jeep ads get a little feistier with more direct head-on comparisons, necessary because of increasing competition in that vehicle segment, Kerr said.

European technology and affordability are still key themes of Alliance. "Renault, the one to watch" is the signoff for all car advertising.

Consistency is important, Kerr noted, because "in the real world, Renault is a brand name that came out of nowhere" and therefore needs constant reinforcement.

One Alliance commercial is an image-builder. It shows the familiar bridge-over-chasm, with Alliance crossing over from high-priced technology to affordability.

A second commercial targets competitors in the under $7,000 class. A fulcrum, with four competitors at one end, tips toward Alliance at the other, as the voiceover says, "All cars under $7,000 are not created equal." Features like long wheelbase and standard electronic fuel injection underscore the point. The price-leader model's $6,161 tag is prominent in ads.

Encore has a sportier orientation. One commercial dramatizes, "You are what you drive" by having a brightly clad individual turning sideways and dissolving into an Encore.

"Imagine yourself as an Encore" says the voiceover, ticking off sales points such as European design, handling and efficiency.

Appealing also to a buyer group composed 40 percent of females, another Encore commercial shows a woman sitting on the floor "playing" with little cars that circle her. "We all play the small car game" when shopping, says the voiceover, listing Encore features.

The sporty Encore GS has been dominating IMSA races in its class, and AMC will tell that story in print that runs in several racing publications.

The new Alliance convertible, with a 10,000-unit first-year sales target, will be folded into multiline ads. Limited volume precludes solo support. AMC will continue to support Fuego in print. The Renault Sportwagon will not receive special creative because of its limited volume.

Jeep ads, except for Grand Wagoneer, all use the "Only in a Jeep" signoff, again to create consistency and reinforcement in an increasingly more competitive market segment.

CJ-7 ads take last year's buffalo commercial a step further. A macho rider gallops atop a buffalo into a sleepy town, sweeping a girl up behind him, riding off down main street and into the hillside, while raucous music blares an upbeat tempo. "There's a feeling you get only in a Jeep" are the only words in this strictly fun-and-excitement emotional appeal.

CJ-7 appears in print as well, with "Only in a Jeep" as the single copy line. Ads rely heavily on skillful photography, such as a rugged individualist shaving in his CJ, against a mountainous waterfall.

This collection of six print ads will be made into a calendar for sale on college campus bookstores, and included in dealer merchandising kits.

Among Jeep models, Cherokee emphasizes the "Only" theme by talking up Cherokee's sweep of 1984 "4WD vehicle of the year" honors from three magazines that create such competition, and other singular points, like its "shift-on-the-fly" capability in its standard full-time 4WD system.

Another commercial takes on Bronco II and Blazer S-10 with reference to Cherokee's higher ground clearance, new turbodiesel engine, five-passenger seating and other characteristics.

The more upscale Wagoneer hits wagon buyers with direct comparisons to Buick Estate Wagon (more luxurious leather interior), Volvo GLC wagon (larger standard engine and better mileage) and Dodge Caravan (more cargo space; four-door design).

Eagle ads continue their security-of-4WD-appeal. One commercial, for example, depicts a mother and daughter driving through rain to a ballet. "Luxury and confidence" are the words in the ad.

Eagle will be promoted regionally in snow belt areas, for example, where it has its big appeal, and with specialized print.

Grand Wagoneer will continue being promoted in print only, with testimonials from outdoor, RV-oriented people such as Brown Cannon Jr., chairman of the Colorado Outward Bound School.

The luxurious "creature comforts" that Grand Wagoneer gives outdoor life are stressed.

From a media standpoint, Ziff-Davis Publishing Co. is doing a 16-page advertorial entitled "Four Wheel Drive Just For the Fun of It" which prominently features Jeeps (and, in passing, acknowledges a few competitors). It features Cherokee, Grand Wagoneer and other models in various settings (beach, hillclimbing). It will run in Car and Driver, Boating, Skiing, Flying and Running magazines.

There are no major shifts in Jeep or Renault media strategy.

Renault kicked off on the U. S. Tennis Open and continues in NFL and other sports and prime time TV.

Nightly news on ABC and NBC has been heavied up.

In print, newsweeklies and special upscale demographic books, like Smithsonian and Omni, are on Renault's list.

Renault also runs in Ampersand, a college publication reaching 150 campuses, and the college Directory of Classes covering 75 schools. There is also a special "spring break" guide for vacationing students that is being specially edited with AMC the only sponsor.

Kerr said Renault has a higher percent of its sales among college students than Ford, Dodge and Honda, for example, and called its new campus effort "an investment in the future."

Overall, Renault's mix is 75 percent TV, 25 percent magazine.

Jeep kicked off Sept. 23 in prime time TV, with NFL football, cable TV (ESPN football, MTV), and other sports on the list. Specialized publications like Four-Wheeler and Off-Road comprise the print.

Overall the media mix is 70 percent TV, 30 percent magazine.

Kerr said AMC is using 77 magazines for Renault and Jeep in fourth-quarter 1984. He added that AMC's co-op program, begun in January, is drawing 90 percent of dealer association's funds. The unique program offers 50/50 co-op money on a year-around basis to associations using either national factory ads or special quarterly-prepared dealer association ads, from AMC's agencies.

Dealer groups can also get 40 percent of their ad costs picked up by using their own agencies.

Saatchi, Saatchi & Compton Advertising handles Jeep and Eagle.

Grey Advertising handles Renault. □

Tent event

Sales of new and used cars at a three-day tent sale sponsored by the Harrisburg (Pa.) Automotive Trade Assn. totaled 1,046. Eighteen dealers participated.

Split-personality state

Demographics reveal 'two' Californias

Stepped-up marketing programs in California by domestic manufacturers are the order of the day. But while Detroit may view the effort as concentrating on a single market, the Golden State is two different segments with differing demographics.

According to J. D. Power & Assoc., there are marked differences between Northern and Southern California, and some manufacturers may be missing the mark by skewing their efforts in one direction or the other.

In a recent newsletter from the Power organization, an update of the firm's California market survey shows "the Southern California market differs more dramatically from the United States as a whole, while Northern California more closely resembles their 49-state counterparts."

Demographics culled from the study reveal that Southern Californians are less home-oriented, more mobile, a little younger, better educated and paid more than those living in Northern California.

In addition to having a median income $2,400 higher than those living in the north, Southern Californians are more likely to be single, with only half the sample indicating they are married. The married percentage is higher in Northern California (62 percent) and compares to 66 percent nationally.

While 71 percent of drivers in the U.S. operate a two- or four-door sedan as their primary vehicle, only slightly more than half of Californians list them as their principal vehicle. Six percent of the state's population own compact pickup trucks compared to 2 percent nationally.

According to Power, "Utilitarian-type vehicles, such as station wagons and standard pickup trucks — which hold an attraction in the more mountainous and rural Northern California—are more frequently owned by automotive consumers in the northern part of the state. In fact, Northern Californians are twice as likely as Southern Californians to use a standard truck for their work and transportation needs (12 percent versus 7 percent)."

As for purchase intent, consumers from both regions in California are joining the shift nationally to four-door sedans, which the Power organization attributes to better design and functional advantages of these vehicles.

Although demand for compact pickups in Southern California will remain fairly stable, 12 percent of Northern Californians indicate that these small trucks figure in their future purchase plans; that's double the current ownership rate of these vehicles in the region. Similarly, in the sports/utility market, demand will more than double over current ownership rates, while demand will stay fairly consistent in Southern California.

"These shifts will have their greatest impact on the standard truck and station wagon segments and demonstrate that compact pickups are being accepted as practical, utility-oriented transportation among Northern Californians," the Power Newsletter states.

The firm said these findings imply there is much more to the Northern California market than the "cosmopolitan San Francisco consumer" and that manufacturers could be missing a bet by focusing primarily on that area than the entire northern half of the state.

"Similar to the country as a whole, the California market should not be viewed as one homogeneous, uniform market. Rather, it is comprised of submarkets with varying needs that should be addressed individually. Manufacturers and advertisers who recognize this will be most successful in reaching the California consumer, particularly the important Southern California market, the newsletter concluded. □

Pontiac polishing excitement image

Promotion strategy focuses on 'fun to drive' road vehicles

By Joseph Bohn
Marketing Editor

Pontiac is still polishing its excitement image, and Grand Am is the newest addition to its growing fold of performance-oriented models.

As such, the General Motors division's new coupe gets the bulk of advertising dollars in the fall quarter, according to Charlene Curry, Pontiac ad manager.

Grand Am and Pontiac 6000, followed by some Sunbird and Firebird later in the quarter, are the only ad vehicles for the introductory period.

Parisienne, Grand Prix and Bonneville are being print-supported only, according to current plans; Pontiac 1000 will get only dealer association support, with some help from special factory funding.

Overall Pontiac strategy continues to be promoting its cars as fun-to-drive, exciting road vehicles; officials feel that the motion of TV is the best way to showcase that.

As a result, Pontiac is swinging into about 80 percent TV and 20 percent other media — including magazine, some newspaper, outdoor, spot radio and direct mail.

The magazine list is way down. News weeklies, in fact, were dropped from the introductory schedule — in direct contrast to last year when print spectaculars were used for the very successful launch of the Fiero two-seat coupe.

Curry said one reason for the heavy TV load is, "We are trying to reach as many people with as much impact as possible" and TV action shots best demonstrate the "roadability and handling" of the autos which is Pontiac's main thrust

TV commercials return to the basics. There are no computer graphics or arresting visuals, like last year's road signs used to introduce Fiero.

Instead '85 commercials are what Curry describes as "simple, honest, straightforward," showing cars moving down highways with brief intercuts allowing viewer eye contact with the commercial's drivers.

The Pontiac crest, followed by singers promoting the familiar "We Build Excitement Theme" open and close each commercial.

Curry said Pontiac has been testing the commercials periodically since last November when work on them first began, and the "tests show we're on track."

Overall there are no celebrity spokespeople or other arresting eye-catchers. "We're letting the cars be the stars," she said.

TV includes NFL football sponsorships on CBS and a fairly heavy prime-time weekly series schedule aimed at the baby-boomer target audience.

Asked if baby boomers aren't normally considered the best-educated generation of Americans, given to a fair amount of reading and not overly heavy TV viewing, Curry conceded they are "in the lowest quintile of TV viewers" but that Pontiac's TV was carefully selected to tune into what they do watch.

Spot radio is being used to promote the Haulin' Oates rock concert tour which Pontiac is sponsoring. Pontiac is also looking at MTV for a sponsorship/promotional tie in to the group. ESPN is part of the cable buy.

Golf pro Jack Nicklaus is being used as a celebrity spokesman but only in limited fleet-sale advertising (talking as one businessman to another).

The magazine list has been abbreviated by omitting news weeklies and scaling back monthlies to a list of about 10 or 15 Curry estimated. Generally they are lifestyle-type books such as Skiing, Tennis and Runner's World. Regional (Sunset) and upscale (Metropolitan Home, Money) publications are also part of the Grand Am mix, for example.

"The New Pontiac Grand Am. One step ahead of the competition. Right in sync with your driving needs," says the headline of a double-page spread.

It is heavily geared to the "wants and needs" of the "discriminating individual who can truly appreciate responsive, exciting road machinery."

Ad copy is long on standard features such as special steering, suspension and engine/powertrain components.

"An exciting new driver's coupe from America's Road Car Company," says the headline of a single-page ad for Grand Am. There is no other descriptive copy other than naming the car and citing the theme.

A Grand Prix print ad talks about instrumentation under an "Aren't you glad we use dials? Don't you wish everyone did?" headline. It also touches on suspension and engine responsiveness.

The Pontiac 6000 STE headline dwells heavily on performance improvements with the multi-port injected engine offered in '85, and suspension improvements, as well as key standard features.

The latter ad runs in November issues of buff books.

D'Arcy-MacManus & Masius handles the account. □

Fighting child abuse

Bill Greig, right, Bill Greig Buick, Royal Oak, Mich., congratulates WBC Super Welterweight Champion Thomas Hearns, of Detroit, for his sponsorship of the first annual Thomas Hearns/Metro Automotive Child Abuse Golf Benefit, held in Lake Orion, Mich.

Philadelphia Auto Show: An annual event

Officers of the Automobile Trade Assn. of Greater Philadelphia sign an agreement with Liberty Productions, Inc., to annually produce the Philadelphia Auto Show. Due to the success of its inaugural year, 1984, a decision was made to continue the show as a yearly exposition. Standing, from left, are: J. P. Moore Jr., association treasurer; Daniel H. Polett, auto show chairman, and Bert Parrish, association executive director. Seated are: Robert D. Lilley, left, president and show director, Liberty Productions, and Joseph Reese, association president.

Talent boom

Grads go into sales

ST. LOUIS. — The recession of the early 1980s has resulted in an improved "quality of salespeople, many of them being college graduates," said L. E. Warner, sales manager of Ford Division's Central region.

Because of shakeouts in the computer, oil and energy fields, the personnel supply for dealerships has been "working out marvelously," Warner told Automotive News.

Warner discovered this favorable situation in Dallas, Houston and Kansas City, where he is based. He said that Ford has embarked on "a massive training and hiring program. Professionals are needed in our industry and many of the newcomers are management-type."

Not too many open points exist in his region, said Warner, whose territory spreads from the Canadian border to the Gulf of Mexico encompassing eight states and 1,350 dealers, including district offices here and in Kansas City, Minneapolis-St. Paul, Dallas, Houston and Omaha.

Many of his dealerships now deemphasize duals and are not too anxious to take on other franchises that aren't selling well, he said.

Ford is seeking salespeople because business is booming, Warner said. □

Golden Shovel Award

Ford Motor Co. honored Nari E. Conner, left, secretary-treasurer, and Eric K. Conner, president, Family Ford - Mercury, Boonville, Ind., with the Golden Shovel Award for the dealership's new facilities.

Spending despite quotas

Japanese importers boost ad budgets

By Joseph Bohn
Marketing Editor

Import advertising spending continues to increase, though not at the rate it would if there were no Japanese car quotas in the U. S.

Still, spending among eight importers surveyed by Automotive News jumped to $400.2 million in 1983, up from $376.1 million the previous year.

Magazine spending by the group reached $62.9 million, up from $55.7 million in 1983.

Spot TV still dominated since many of these brands like to pick their markets.

Spot TV reached $107.8 million, up modestly from $114.6 million the previous year.

Network TV also showed a categorical increase, reaching $97.5 million, up from $82.2 million in 1982.

Toyota and Nissan dominate the group with expenditures well in excess of $100 million each. However, the rate of increase for both has slowed down sharply from prior years.

Toyota's outlays were $113.6 million, according to Advertising Age estimates, up just marginally from $111.3 million the previous year.

Nissan, which has been outspending sales volume leader Toyota, had outlays of $122.6 million, up from $117.6 million in 1982, Ad Age estimates.

There were no sharp media shifts among the leaders, except for a big increase in Nissan's network TV to $33.6 million from $23.5 million the previous year.

Toyota magazine was up modestly at $12.4 million compared to $10.9 million in 1982. Nissan magazine jumped to $13.4 million from $12.7 million the previous year.

Spot TV at Toyota of $42.5 million was off from the $44.8 million of 1982; while Nissan escalated its spot TV spending to $37.7 million from $32.7 million in 1982.

Mitsubishi has been coming on strongly since its debut a few years ago. Its expenditures exceeded those of Isuzu last year, and are just behind BMW's and Volvo's.

Look for the Japanese group to become significantly more aggressive in their spending, once quotas get scaled back. □

Up 42 pct. to 2,307,582

7-month registrations hit an alltime high

Continued from Page 16

Group 1 count was 625,883.

The increases in this weight group since 1978 reflect the boost in sales of imported compact truck and the entry of a variety of small domestic trucks.

In Group 2, there were 915,242 tallies through July, a gain of 36.7 percent over last year's 669,432. The seven-month record of 1,406,110 was set in 1978.

The Group 3 count soared 168.3 percent to 22,695 units, compared with only 8,460 a year ago. The seven-month total six years ago was 24,430.

Through July, Group 4 trucks totaled 404, an increase of 123.2 percent over last year's 181 units. The 1978 total was 8,021. In Group 5, the Group 5 count was up 305.1 percent to 1,268 units, compared with 313 last year. There were 1,772 tallies in this group at the same time six years ago.

The sharp increase in the popularity of mid-range diesels has caused a vast swing in registrations of Groups 6 and 7 trucks.

• The Group 6 total through July was up 10.4 percent to 25,454 units, compared with 23,049 a year ago. In 1978, however, the count was 78,757, and that was far below the 124,479 units registered in 1973, the year before the first oil crisis had a big impact on the big-truck market.

Group 7 registrations through July totaled 36,386 units, a gain of 32.8 percent over last year's 27,390. In the same period six years ago, the Group 7 count was 20,810.

Seven-month Group 8 tallies were up 69.3 percent to 69,780 units, compared with 41,225 a year ago and 86,899 in 1978. The alltime high for the period was set in 1979, with 98,100 registrations.

New-truck registrations in July totaled 347,025 units, an increase of 34 percent over last year's 258,967. It was the sixth straight month in which the count has topped the 300,000 mark.

Ford increased its lead over Chevrolet by about 4,000 units during the month and was in front at the end of July by more than 30,000 tallies. Both Ford and Chevrolet, however, suffered losses of almost 3 percentage points in their share of total industry registrations.

Index of highway roughness proposed as world standard

ANN ARBOR, Mich. — University of Michigan researchers have developed a standard index of road roughness and propose that it be adopted worldwide to aid highway engineers in designing and managing road systems.

A standard index offers an international language to discuss road problems, experiments and advancements, and a base of information for managing and funding of road systems, said Thomas Gillespie, research scientist with the U-M Transportation Research Institute.

Gillespie and fellow researcher Michael Sayers wrote a manual for the World Bank describing how the standard index could be measured and applied in different countries. The World Bank lends money to less-developed countries for road construction.

The index itself is based on an 18-point scale. Very smooth roads and airport runways fall into the lowest ranges; roads without potholes or corrugations fall into the 2-3 range.

As roads deteriorate, developing occasional potholes and depressions, the values increase to 5. As roughness gets much above this level, drivers begin to decrease their normal travel speed. Very rough and deeply rutted roads, often found in developing countries, reach the top of the scale.

"Accuracy, simplicity, workability, practicality—those were the virtues we sought in developing the index," said Gillespie.

"Road-builders in Kenya or India must be able to use the index, just as in developed countries, and without having to send their raw data to Washington or Paris or Ann Arbor for computer processing."

He said rough roads increase transportation costs through increased fuel consumption, wear and tear on tires and suspensions, cargo damage and accidents. Researchers have reported losses in fuel consumption of up to 30 percent on rough roads, he said.

He also said road-roughness studies could help auto manufacturers develop better durability test tracks to imitate certain road surfaces.

Gillespie said many roads in the northern U.S., with its harsh winters, fall in the 3-5 range on the value scale—pavement is in the early stages of deterioration, marred by some patches or potholes. Roads in the South are smoother.

"Road roughness receives a high priority from highway officials throughout the U.S.," he said, "because road surface is one of the qualities by which the public judges the job being done by the highway departments, so they are sensitive to that issue."

The U.S. spends about $12 billion annually for highway maintenance, according to the U.S. Department of Transportation. Each state, though, has its own roughness code.

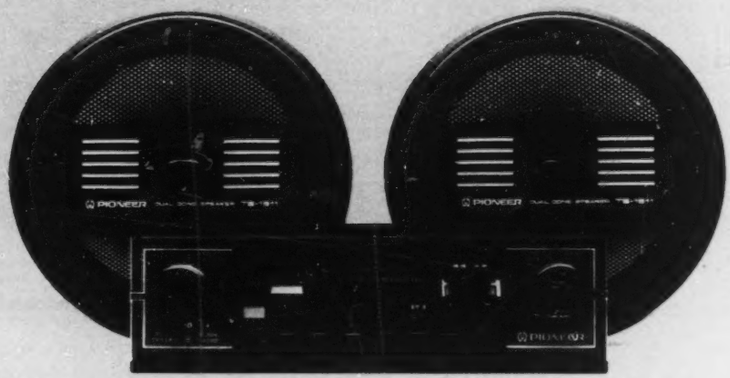
"Progress is impeded whenever we all have different sets of units," Gillespie said.

Braman buys deal in Denver area

DENVER. — Norman Braman, who holds 21 automobile franchises in the Miami area, has purchased Bob Hagestad Porsche-Audi in suburban Lakewood. The business will be called Prestige Porsche-Audi.

Braman said the 74 employes of the Porsche-Audi dealership will be retained, with John Hitt continuing as general manager.

WHY CONTEMPO HAS THREE TIMES THE POWER OF ORDINARY VANS.



You don't need to look under the hood to find more power.

Because Contempo Vans has put it in the dash, with the KE-A880 High-Power Supertuner™ III from Pioneer.

This AM/FM stereo cassette produces three times the power of standard car stereos. And Contempo pairs it with Pioneer's TS-1611 Maxxial™ Speakers, to get maximum power handling capability.

Contempo puts Pioneer in their vans because they know it will not only boost the music, it will also boost their sales.

PIONEER®
Because the music matters.

NHTSA crashes of Tercel, Prelude have good results

WASHINGTON. — Results from the last six 1984 models crashed by NHTSA for comparative occupant protection purposes found the Honda Prelude and the Toyota Tercel showing spectacularly good head and chest results. But two other Japanese cars—the Isuzu Impulse and the Mitsubishi Tredia—produced disappointing readings.

A Head Injury Criteria (HIC) of 1000 is acceptable in the 35-MPH barrier crash (one-third greater force than testing for compliance with the occupant protection standard).

NHTSA reported that the Honda Prelude coupe, weighing 2,780 pounds, achieved a HIC of 659 for the driver dummy and a HIC of 475 for the passenger dummy.

Using 60 Gs as acceptable chest deceleration, NHTSA reported the Prelude's results as 43 for driver and 31 for passenger. The forces on the femurs also clocked in very low.

The '84 Toyota Tercel four-door hatchback also did very well. Its HIC numbers were 658 and 492 for driver and passenger, respectively. The chest decelerations were 43 and 41 Gs for driver and passenger.

The Isuzu Impulse coupe had low chest Gs—46 and 49 for driver and passenger, respectively—but the HIC numbers were uncomfortably high—1769 for driver and 2454 for passenger.

The Mitsubishi Tredia exceeded acceptable levels on three of the four dummy readings: HICs of 1314 for driver and 1521 for passenger; 87 for driver chest Gs and 57 for passenger chest Gs.

The '84 Renault Alliance four-door sedan has a driver dummy HIC of 940 and data failure for the passenger side. Chest Gs were 55 and 42 for driver and passenger respectively.

The '84 Ford Mustang convertible produced these numbers: 894 HIC for driver and 1112 for passenger; 55 Gs for driver chest and 38 Gs for passenger chest.

NHTSA also reported on one crash conducted on a 1985 model—the Buick Park Avenue four-door. The data was consistently worse for the driver than for the passenger. NHTSA reported HIC of 1550 and 662 for driver and passenger, respectively and 50 Gs and 37 Gs for driver and passenger chest deceleration, respectively.

All vehicles were also tested to criteria of Standard 212 (windshield retention) and Standard 301 (fuel tank integrity). Despite the higher crash speed, all vehicles passed except the Ford convertible, on which the windshield loosened.

Honda dealer group names Krause president

LOS ANGELES.—The Honda Automobile Dealers Assn. of Southern California has elected Bill Krause, Bill Krause Honda, Los Angeles, president.

Treasurer is Steve May, Majestic Pontiac-Honda, Los Angeles. Other board members are: Bob Auth, Kaiser Brothers, Los Angeles; Lathrop Hoffman, Sierra Autocars, Monrovia; Guy Martin, Guy Martin Honda, Woodland Hills; Bob Quaid, Quaid Imports, Riverside, and Harry Sacks, Midway Honda-GMC, Fontana.

133,242 cars scheduled for week, but total is 'iffy'

Strike muddles production picture

By Louise Kertesz
Detroit Reporter

Estimates of U.S. auto production last week were shaky because of the General Motors strike.

Targeted production at GM was based on the assumption that a quick settlement could be reached.

When a tentative agreement was reached early Friday, GM set about getting its plants back to work. At presstime, only the Fiero plant in Pontiac was scheduled to work last Friday (Sept. 21). It was called back for the second shift and was also slated to work Saturday (Sept. 22).

Auto makers slated assembly of 133,242 cars last week, a decrease of 13.14 percent from the previous week's three-month high of 153,406. Last week's production was also 13.04 percent lower than the year-ago week's 153,234.

So far this year, 5,748,573 cars have been built, 20.77 percent more than the 4,759,830 assembled last year at this time.

Last week's expected production by company was as follows: GM, 48.30 percent; Ford Motor Co., 27.40 percent; Chrysler Corp., 18.24 percent; American Motors, 3.60 percent; Honda, 2.10 percent, and Volkswagen of America, 0.36 percent.

Saturday overtime was scheduled at Ford's Edison (N.J.), Kansas City and St. Louis facilities.

GM announced last week that its Tarrytown (N.Y.) plant will be down until Dec. 11 for conversion to A-car production. It had been building Citation X-cars.

Chrysler's Jefferson (Detroit) plant also worked two eight-hour overtime shifts Saturday.

A walkout by trim department workers at American Motors' Kenosha (Wis.) plant last Tuesday resulted in a production shortfall of about 200 vehicles.

The company's revised estimate for last week was 4,600 units.

AMC buys Canadian site for new assembly plant

By Richard Johnson
Detroit Reporter

American Motors has agreed to purchase roughly 250 acres in Brampton, Ont., as the site of an assembly plant that will turn out a new AMC/Renault mid-size car for the North American market in 1987.

The land, which is located about five miles from the company's existing Brampton assembly plant, was acquired by AMC from Bramalea, Ltd., of Toronto. AMC also purchased an option on another 100 acres.

AMC had earlier sought to buy a nearly 300-acre parcel owned by Bramalea, but ran into local opposition because 100 acres would have needed rezoning from agricultural to industrial use.

AMC accepted the developer's offer of an alternative parcel designated entirely for industrial development.

The new site has also drawn criticism from residents living west of the proposed factory grounds. However, an AMC spokesman said the company has successfully dealt with the opposition and said the project is "pretty well on track." A local public hearing on the proposal was slated for late last week.

Development of the site is due to begin Oct. 1 and the structure is scheduled to be completed by mid-1986. In June, AMC announced a total investment of $764 million (Canadian) in the new facility.

Company officials last week declined to state the purchase price of the land.

The Canadian federal and Ontario provincial governments will invest up to $121 million (Canadian) in the Brampton facility on a 50-50 basis, and will be reimbursed through royalties on each new car sold.

The remainder of the investment comes from AMC; from Renault, which owns about 46 percent of American Motors, and Canadian bank loans.

The facility is expected to employ 1,800 new workers and some 1,200 from the existing Brampton plant, where AMC now builds the Eagle. An estimated 4,200 jobs will be generated at supplier parts facilities.

AMC/Renault plans to build 150,000 cars a year when the new Brampton plant opens in the summer of 1987. The Eagle plant produces about 30,000 units a year.

AMC Chairman Paul Tippett has said the company will not build the Renault R-25 intermediate at the Brampton plant because of the time needed to convert the hatchback for the U.S. market.

He recently said that a new mid-size, front-wheel drive sedan designed by Renault with AMC input is currently in the works for the new assembly plant.

Truck production drops 8 pct. to 61,069 for week

The General Motors strike slowed the strong pace of domestic truck production, though it continues well above last year's.

Makers expected to complete 61,069 trucks last week, down 8.28 percent from the previous week's 66,582, but 15.42 percent higher than the year-ago week's 52,908.

Working Saturday were Ford Motor Co.'s Lorain (O.) plant and American Motors' Cherokee and Wagoneer lines in Toledo.

Car output jumps 24 pct. in Canada; GM, Ford gain

Canadian car production last week was up 24.75 percent over the previous week.

Return to normal work schedules after model changeover at General Motors and resumption of production at Ford Motor Co.'s Oakville (Ont.) facility contributed to the increase. The Oakville plant was down due to a shortage of engines.

Makers targeted completion of 19,953 cars last week, compared with the previous week's 15,995. Production was 9.94 percent better than the year-ago week's 18,149.

Year-to-date, 775,893 cars have been built, up 11.8 percent over 695,933 last year.

Last week's slated assembly of 18,104 trucks was 2.78 percent above the previous week's 17,615 and 45.27 percent higher than the year-ago week's 12,462.

This year, 588,062 trucks have been built, a 54.93 percent increase over the 379,575 completed at this time last year.

Chrysler Corp. built 2,358 Plymouth Voyagers, 2,346 Dodge Caravans and 936 Mini Ram Vans at its Windsor (Ont.) facility last week. The total of T-115s assembled this year is now 164,046.

Chrysler tags $9.5 billion for series of new models

By Dan McCosh
Detroit Reporter

Chrysler Corp.'s plan to increase capital spending to $9.5 billion over the next five years, a $1.5-billion increase over its plans just a year ago, includes an accelerated new-car program that means introducing a new car every six months.

The ambitious program means replacing all its domestically built cars between 1984 and 1988 model years, plus filling out its product line to span the subcompact to full-size range.

Chrysler's domestically built new-car plans, compiled from various sources, include:

1. 1986½—Introduction of the P-car, replacing the current L-body Omni/Horizon.

Described as "upscale" (higher-priced) from the car it replaces, it is designed to integrate the basic K-body floorpan and use compatible components, hence reduce production costs compared with the unique L-body with its imported engine.

2. 1987—Introduction of the J-body series.

Described as a "Cordoba-like" two-door specialty intermediate, the J-body is a sleek, aerostyled car based on the 1985 H-body platform. It will be launched as a convertible and a coupe. This is a departure from the recent industry practice of modifying an existing line for a convertible.

3. 1987½—Introduction of the C-body. Chrysler's answer to Ford's Taurus program due in 1986, the C-body will be a four-door sedan taking over the current rear-drive M-body slot, thus becoming Chrysler's largest sedan.

4. 1988—Introduction of a new K-body. Chrysler's bread-and-butter compact, reskinned in the 1985 model year, gets a major rework.

• In addition to Chrysler's domestic plans, it anticipates additional niches to be filled with various overseas projects.

A recent tieup with Maserati is expected to result in two high-priced specialty cars, with a two-seat, mid-engine Chrysler-powered car anticipated in about the 1987 model year.

Mitsubishi's Japanese affiliate, Mitsubishi Motors Corp., is still waffling on plans for a U. S.-built small car, but Chrysler still anticipates a new small car from that source to be priced lower than the P-body.

Chrysler also is negotiating with Korea's Samsung Group, which could supply it with its lowest-priced small car, sometime after 1987.

Chrysler's car/truck hybrid minivan is expected to add a "stretched" derivative when it goes into produtcion at a second plant in 1986.

Another major truck program is the new N-body minitruck due in 1986, which will be followed by a rework of Chrysler's "standard" pickups and van bodies, and likely a 4WD utility vehicle to compete with Ford, Chevrolet and AMC products.

The product plans demonstrate Chrysler's effort to reduce cannibalization of its own product lines to a minimum.

The M-body won't be offered in either a two-door version or

UAW urges members to approve GM pact

By Marjorie Sorge
Labor Editor

ST. LOUIS. — The UAW's 300-member GM Council last week overwhelmingly recommended that the union's new three-year tentative agreement with General Motors be sent to the membership for ratification.

UAW President Owen Bieber, who called the pact an historic, good and excellent agreement, said the ratification process would be over by Oct. 14. He said he is confident the agreement will be ratified.

"It's the first contract of its kind that talks not only current protection but protection for the future as well," Bieber said.

While the ratification process continues at GM, the union will return to Ford soon and pick up talks which were put on the back burner when GM was picked as the target company about three weeks ago. Bieber said he expects Ford to follow the pattern with a little tailoring.

Following completion of the Ford and GM negotiations, Bieber said he expects to approach Chrysler about reopening its pact which expires Oct. 15, 1985.

Contract highlights and analysis on Page 3.

Chrysler Chairman Lee Iacocca, while not totally closing the door to talking with the union, indicated he does not approve of the idea.

The GM Council met with the union's GM leaders here last week for about 6½ hours of explanation before recommending the contract. One of the most challenging portions to explain

Chrysler Corp.'s newest

Chrysler LeBaron GTS to debut

A five-passenger car on a 103-inch wheelbase, the new Chrysler LeBaron GTS is available with fuel-injected 2.2-liter 4-cylinder engine or turbocharged option. Story, other pictures on Page 32.

New Dodge touring sedan for '85

Dodge's version of the Chrysler Corp. H-body is the Lancer, a sporty four-door hatchback with luxury features. It will go on sale Jan. 3. Instrument panel has space-age look and added emphasis has been given to ride comfort and handling. Story, other pictures on Page 28.

Plymouth Caravelle joins the lineup

Plymouth has introduced a new nameplate to its lineup for 1985—the top-of-the-line Caravelle SE, a six-passenger, front-wheel-drive family car. Built on a 103.1-inch wheelbase, the four-door sedan is powered by a 2.2-liter (135-CID) electronic-fuel-injected engine. A base Caravelle will be introduced later in the model year. Story, other pictures on Page 33.

breaking news

Dedeurwaerder named AMC chief executive

SOUTHFIELD, Mich.—President Jose J. Dedeurwaerder, 51, has been elected chief executive officer of American Motors. He succeeds Paul Tippett, 51, who continues as chairman. Tippett also will serve as chairman of the executive committee of the board. Dedeurwaerder has been AMC president and chief operating officer since January, 1982.

Nissan to join two-seater club

TOKYO.—Nissan plans to introduce a sporty two-seater in the U. S. probably in 1987. The car is targeted for the $5,000 to $6,000 price range and is expected to attract young buyers.

Court prods NHTSA on tire grading

WASHINGTON.—NHTSA's proposed schedule for reinstating treadwear grading under the Uniform Tire Quality Grading standard is too dilatory, the U. S. Court of Appeals for the District of Columbia Circuit has ruled. The agency has until Oct. 11 to either reinstate the old requirements at once or submit to the court an accelerated schedule.

First Yugo to arrive in U. S. next spring

Bricklin inks $100 million contract

By John Russell
New York Staff Writer

NEW YORK. — A $100 million contract has been signed by Bricklin Industries and Zavodi Crvena Zastava, Yugoslavian manufacturer of the Yugo 55, and the cars are expected to arrive in the U. S. next spring.

According to an announcement made by Malcolm Bricklin, chairman of Bricklin Industries, which will be importing the cars, initial plans call for importing 35,000 cars in the first year.

In a prepared statement, Bricklin said the cars are undergoing testing to satisfy federal safety and emissions requirements, and he plans to market the car with a base price of $3,990.

Anthony Ciminera, senior vice president for Bricklin, recently returned from the factory. He told Automotive News hundreds of changes have been made to the Yugo 55 to make it conform to U. S. regulations and market demands.

The first cars to arrive will

In new $7-billion contract

Both GM, UAW get what they want

General Motors and the UAW walked away from the bargaining table this year with a $7 billion contract that gave both what they wanted.

GM is ensured of keeping its strategic plan of becoming more competitive worldwide. The UAW gets job security for its workers without destroying the company's competitiveness and has set itself as a model for other unions to follow.

News Analysis

On the face of it, $7 billion seems like a lot of money. But the agreement allows GM to improve productivity at least 5 percent in each of the three years of the contract, which is more than is usually allowed.

It increases labor costs by about 8 percent in the first year and six percent in each of the last two, raising the cost per hour from the current $22.95 to about $25.86.

Speculation had been that GM would try and buy off the union to gain unlimited outsourcing abilities or avoid a job security program for all its 350,000 UAW-represented workers.

It didn't happen.

The wage increases are moderate. Instead, the company and the union negotiated a six-year, $1-billion-plus job-security program which is the crux of the contract.

• Its basis is a "job bank," whereby laid-off workers earn their normal wages and benefits while being trained for other jobs at GM or outside the company.

One source said suppliers could be encouraged to take some of the retrained people if GM cannot place them. That would be a last resort. It is not yet known if those workers would be expected to be paid GM wages and benefits if they relocated in a supplier firm, the source said.

Some have worried that the $1 billion would not last the entire six years, but one source said GM has nothing planned in the next year to 18 months that would make much of a dent in that fund.

Also included in the pact is a golden handshake early-retirement program. Workers will be paid from $10,000 to $55,000 to give up their seniority rights. This is to encourage early retirement and pave the way for new hiring.

Normal early-retirement benefits also were increased.

It may seem like GM gave away the store. It didn't. Its major goal is to be more competitive in the world market. That isn't done by simply reducing or maintaining labor costs.

• GM is hoping many of its workers will opt for early retirement. About 40,000 will be eligible for early retirement over the three years of the contract.

GM is planning to spend between $6 billion and $7 billion per year for the foreseeable future to improve its plants and build more vehicles per hour. Often, new equipment and new technology mean fewer jobs.

GM is getting what it wants: Improved productivity in an attempt to become competitive with the Japanese by 1986. But it has proved it can do it in a humane way, not by casting aside its workers.

There also are other productivity improvements. The plants are allowed to create innovative wage agreements to become more competitive. The contract asks that management and union locals at each plant look into reducing the number of non-skilled wage rates and classifications, and that they work toward programs in which workers earn more money by learning more jobs.

Allowing the plants to make these moves also reduces the union's needs for limits on outsourcing. GM agreed to consult the UAW when it is contemplating outsourcing that would affect 25 or more jobs. The old agreement required notification if 100 jobs were affected. Under the new plan, those at each plant have a freer hand to make it more competitive and perhaps stop the outsourcing.

• Workers have a say in their future. GM, of course, must be careful to not abuse the new system.

In addition, GM and the UAW set up a $100-million fund to create new businesses to place the retrained workers. Under the GM reorganization, divisions can create subsidiary companies which are not part of the corporation but belong solely to a division. This could be one area of investment.

In addition, it would almost assure that the UAW would be the bargaining agent for these new companies.

GM also has made substantial investments in robotics and computer firms to advance its reorganization and diversify its

GM says it intends to spend more in U. S.

By Marjorie Sorge
Labor Editor

General Motors' long-term strategy is to remain a U.S. corporation, with a major portion of its facilities, people, spending and assembly capacity in this country, the company told the union in this round of negotiations.

In a letter that is part of the new tentative agreement, GM told the UAW it is "dedicated to achieving a competitive posture within a framework that contributes to the job security of its employes." The UAW has feared that GM has been moving to outsource numerous components and cut its workforce substantially.

While the new agreement does not prohibit GM from doing either, it does give the union more say in GM's outsourcing plans and provides job security through job-bank programs, in which laid-off workers are retrained for new work, either inside or outside the corporation.

GM told the UAW it intends to increase spending in the U.S. Those expenditures include:

1. The GM-10 scheduled for 1988. It is a replacement for the A-cars (Celebrity, 6000, etc.) and rear-wheel-drive G-cars (Cutlass Supreme, etc.) and will include seven assembly plants. The investment will be close to $7 billion.

2. The new 1986 E and K offering (Eldorado, Toronado, Seville, Riviera), the 1987 H (replacing LeSabre and Eighty-eight) and the GM-25 replacement for the X-cars (Citation, Phoenix) in 1986 also will be built in the U.S.

3. The Baltimore plant, which is now building the new mid-size M-van, will reach capacity of 175,000 units in 1985.

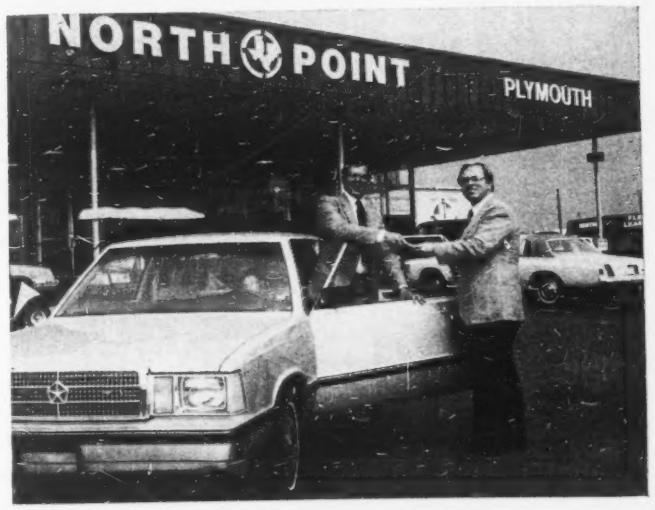
4. An investment of more than $2 billion in a new regular-size pickup, to be introduced in the fall of 1986. That project will employ more than 11,700 UAW members.

5. Investments in the production of multipoint fuel injection, direct-fire ignition systems and on-board computers for cars; the conversion of a diesel-engine facility to produce a new, high technology gasoline engine.

6. The Saturn project, which is a joint GM/UAW program to build a new small car from the ground up. GM promised to build it in the U.S. in the late 1980s.

In the letter, GM praised the UAW for its efforts to improve operational effectiveness. That helped GM make the commitment to invest more money in the U.S., the company said. Over the last five years, it has spent more than $24 billion in the U.S., representing more than 70 percent of GM's worldwide expenditures during this period.

Under the job security program, many workers will be retrained for jobs in the new facilities.



No complaints about Mexican K-cars

Buddy Hill, right, manager of North Point Chrysler-Plymouth, Houston, and Jack Sherman, sales manager, report that in the first eight months of selling Mexican-built K cars they have not received a single complaint from U. S. owners. Jerome B. York, director general of Chrysler de Mexico, announced recently that 3,000 '84 K-cars have been received by dealers in the U. S.

UAW-GM Contract Highlights

WAGES/ECONOMICS

The economic gains could be worth more than $13,000 to each of GM's 350,000 workers over the three-year agreement—$8,730 in wages, COLA, bonuses and $180 one-time-only payment; $3,000 in profit sharing and $1,500 in perfect attendance awards.

• One general raise of 9 to 50 cents per hour in the first year of the pact depending on straight-time rate.

• Performance bonuses of 2.25 percent of the previous year's straight-time earnings including COLA in the second and third years of the contract (estimated at $725 in October, 1985, and $750 in October, 1986, assuming 5 percent inflation).

• $2.99 of the current $3.04 COLA float folded into the base wage raising the hourly rate of a major assembler from $9.63 an hour to $12.82 (including the general wage increase of 20 cents). COLA is now figured on one cent increase for every 0.26 percentage point rise in the U. S. Consumer Price Index instead of the combined U. S. - Canadian CPI.

Of the COLA, 13 cents is diverted over the three-year life of the agreement (one cent in each of the first nine quarters and two cents in each of the last two) to help GM pay for benefits. Consequently, GM gets back about $91 million.

• Profit sharing continues and is expected to produce about $1,000 a year for the average worker. Profit sharing will be treated as wages under the UAW's dues structure.

• A one-time-only across-the-board $180 special payment for seniority workers and those laid off or on leave of absence but returning to work prior to Sept. 14, 1985. Also treated as income in the union's dues structure.

• A $50 payment in each quarter for perfect attendance and a $300 reward for perfect attendance for the entire year. This could result in an annual payment of $500 for workers with perfect attendance. Those with perfect attendance in three of the four quarters will get a special award of $150.

JOB SECURITY

• A $1 billion GM-paid Job Opportunity Bank (JOB) Security Program to pay the wages and benefits of workers laid off because of new technology, outsourcing, negotiated productivity improvements, some movement of work and production consolidation. Those workers are to be retrained and placed in new jobs at GM.

• If the JOB becomes too full, workers may be eligible for special programs. Those aged 55 to 61 with 10 or more

To put auto showrooms within the reach of more people

Ford develops satellite dealerships

By Richard Johnson
Detroit Reporter

The satellite dealer network being strung together by Ford Division may not be the wave of the future, but it could become an important complement to full-line retailers, according to company officials.

Secondary outlets are regarded by Ford as a means of putting automobile showrooms within reach of more potential customers. Although the jury is still out on the effectiveness of satellites, Ford is encouraged.

"Some of our research indicates some very tangible reasons for us to be optimistic," said Philip Novell, Ford Division general sales manager.

Satellites are fundamentally scaled-down sales offices placed in geographic areas which cannot support a complete-line dealership. The secondary stores are situated primarily in rural areas and are owned and operated by dealers based in adjacent small towns.

Ford also has five stores in large shopping malls, and satellites may someday be a marketing tool in dense urban areas where square footage is at a premium.

According to Novell, the satellite concept enables the company to maintain service in areas where dealers have closed, attract new customers not otherwise exposed to Ford products and possibly pave the way for eventual opening of a full-line store.

The division currently has 88 satellite dealerships around the

Domestic-car sales strong in mid-September

By Roger Rowand
Engineering Editor

Domestic car sales are closing out the warm-weather selling season with strong performances in almost every corner. They climbed a robust 32.81 percent in the Sept. 11-20 period to total 218,847 units versus 164,776 units a year earlier.

Only American Motors and Volkswagen showed declines in sales of domestic cars.

It was the industry's best mid-September performance since 1979 when 228,100 units were sold.

There were nine selling days in this year's period compared with eight days a year before.

Chevrolet Cavalier continued to reign as the nation's hottest domestic property with sales of 13,650 units. It was followed by Ford Escort with 11,036, Chevrolet Celebrity with 6,964 and Oldsmobile Cutlass Supreme with 6,783. Standard Chevrolet filled out the list of the five top-selling nameplates with 6,502 units delivered at retail.

Honda, with sales of 4,790 compared with 1,874 last year had the biggest percentage gain in the period, 155.60 percent.

The most recent daily selling rate averaged 24,316 cars for nine days, 18.06 percent ahead of the daily rate of 20,597 for eight days in the similar 1983 period.

Chrysler Corp. sales of 28,253 were up 31.83 percent from 21,431 last year (up 17.17 percent daily rate). General Motors sales were up 28.46 percent to 119,008 from 92,639 (up 14.19 percent daily sales rate).

Ford Motor Co.'s sales of 60,625 domestic cars were 44.62 percent ahead of the 41,920 sold a year before. Ford's daily selling rate was 28.55 percent above that in the 1983 10-day span.

• American Motors saw its dealers deliver 4,290 new cars, down 6.74 percent from 4,600 (down 17.04 daily rate).

Honda dealers sold 4,790 cars this year versus 1,874 in the similar 1983 period (plus 127.35 percent daily rate).

Volkswagen sales in the 10 days totaled 1,881 compared with 2,312 a year before, a fall-off of 18.64 percent (daily rate off 27.68 percent).

Ford Motor's performance earned it a share-of-market increase to 27.70 percent from 25.44 a year before. GM's share eased to 54.38 percent from 56.22 while Chrysler's inched lower to 12.91 percent from 13.01 percent.

Honda's share of market climbed to 2.19 percent from 1.14 percent last year.

Volkswagen's share dipped to 0.86 percent from 1.40 percent, and AMC's share slid to 1.96 percent from 2.79 percent.

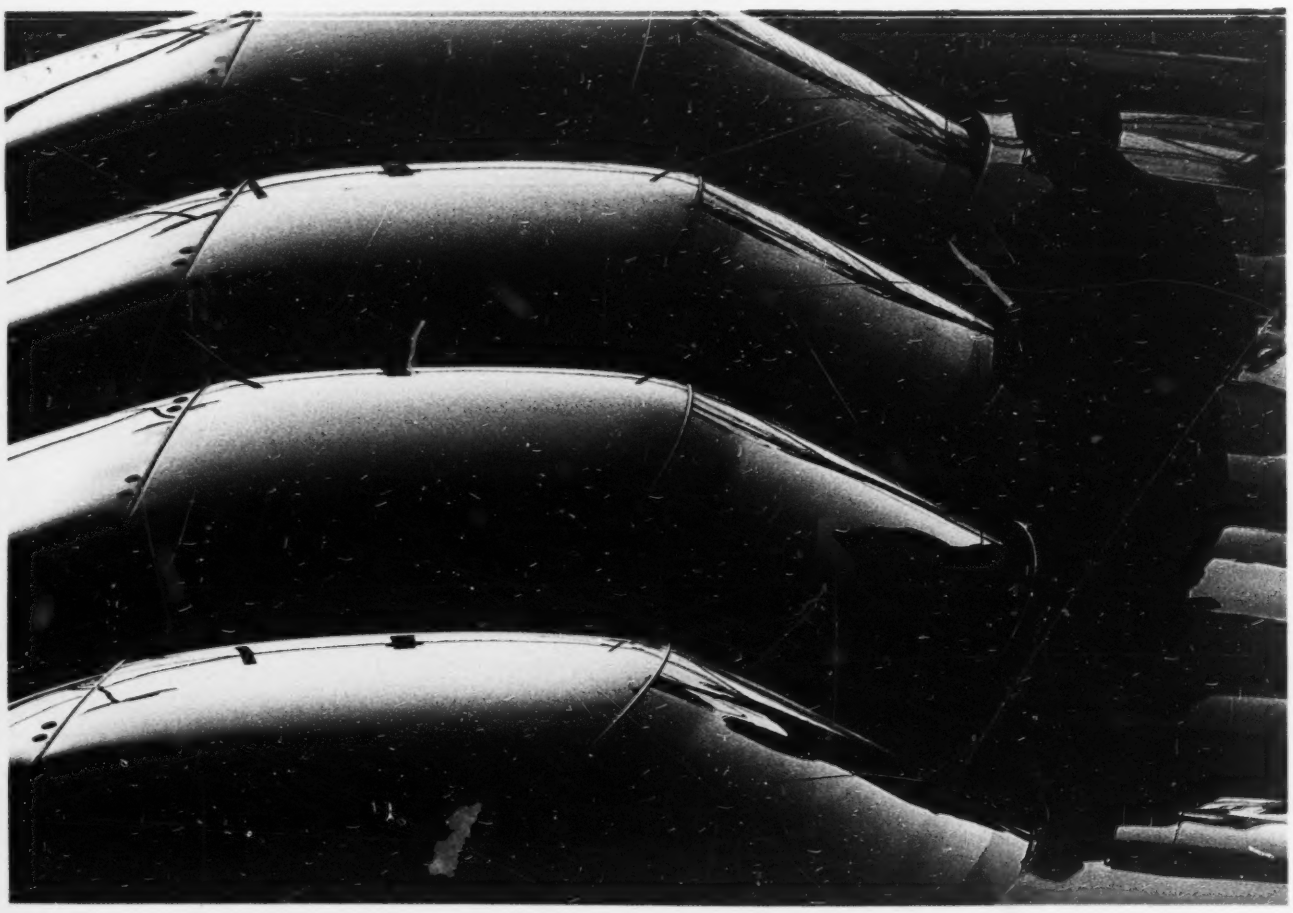
Sales tallies for the various domestic makes showed percentage increases for Plymouth of 26.10; Chrysler, 41.01, and Dodge, 27.92.

For Ford the gain was 48.17 percent while it was 46.74 percent for Mercury and 8.47 percent for Lincoln.

At GM, Buick's percentage gain in the period was 32.94, Cadillac's 18.50, Chevrolet's 37.74, Oldsmobile's 7.12 and Pontiac's 42.50.

AMC (Eagle) was down 56.52 percent, and Renault was up 5.71 percent.

AUTOMOBILE



Our policy is simplicity.

There are two kinds of insurance coverage for the business you're in.

One is the kind you have: most likely a patchwork of two, three or even more policies designed for businesses in general. You're paying for coverage you don't need. And you can't add coverage you want without attaching even more policies.

The other kind of coverage is ours. A specialized business insurance concept started in 1922. Our single policy offers all the coverage you need now with the built-in flexibility to add coverage without adding policies. You pay for the coverage you need now and no more until you need more.

Our policy works. Because our policy is designed specifically for the automobile dealership.

It's that simple.

The Specialists.

GM figures cost to stockholders of EDS purchase

By Michelle Krebs
Financial Editor

The earnings of General Motors will be diluted 99 cents per share for the next five years because of its proposed $2.55 billion acquisition of Electronic Data Systems Corp., according to proxy material mailed to shareholders of both companies.

GM showed in the proxy that if EDS had been a part of the auto company during the 12 months ended June 30, 1984, per-share earnings would have been reduced to $15.65 from $16.64.

The dilution of GM stock was more than analysts — some of whom have criticized GM for paying too much for EDS — had predicted.

GM said the $2.2 billion paid over the book value of the Dallas-based data processing firm would be "ascribed principally to the computer software programs developed by EDS, existing customer contracts and other similar assets." The $2.2 billion will be amortized over five years.

Auto analyst Maryann Keller said the dilution of stock was more than she had expected but was insignificant.

"You have to look at it in terms of what EDS will do for GM," she said. "It would cost GM more than that to hire EDS."

The proxy also confirmed that GM will transfer 10,000 GM employes to EDS, which will operate as a subsidiary of the auto company. In fact, the transfer of those employes already has begun (Automotive News, Sept. 24).

The proxy material was sent to GM's one million shareholders for authorization by mail of a new Class E common stock, which will be used to acquire EDS.

The 11,000 shareholders of EDS also received the proxy. A special shareholders' meeting will be held in Dallas Oct. 18 for voting on the proposed merger. GM already has approval of 47.1 percent of the stock.

As dealers strive to boost sales

There's always a new promotion

By Joseph Bohn
Marketing Editor

California continues to get a lot of special attention in factory promotions.

More than 18,000 people have signed up for Ford's Thunderbird Grand Prix series of amateur tennis tournaments in Southern California. Ford Motor and its Southern California dealers are sponsoring the event.

Grand prize is an '85 Ford Thunderbird Fila, named after the largest sports apparel firm in Italy, said Steven C. Taylor, Ford Division California marketing manager.

The tournament gives Ford a chance to reintroduce itself to community members, "many of whom haven't driven a domestic car for some time," Taylor said.

The weekend tournaments began early this year and lead up to the Master's Playoffs in mid-January, 1985.

Meanwhile, the "Top 30 Sales Rally," a 30-day advertising and promotion campaign developed by Skirboll & Garber Advertising, Pittsburgh, for the Super Grand Olds Gang produced a near-record month for the Pittsburgh Oldsmobile zone.

The 87-member Olds dealer group, covering an area from Sharon and Oil City, Pa., to Johnstown and Altoona, Pa., sold 2,740 new cars during a one-month period this summer.

Consumers are able to reach out and touch Toyota trucks in an "Opportunity Calling" promotion developed by AT&T in association with Toyota Motor Sales, U.S.A., and other companies.

Through the program, more than 25 million AT&T customers earn credits for making long-distance phone calls. They can apply the credits to specific savings on Toyota trucks and 60 other products.

Toyota estimates the venture will bring between 500 and 1,200 truck buyers to its dealerships.

• Dawson & Dawson Advertising, Chicago, in conjunction with Video Remote Services, Bloomfield Hills, Mich., produced a 30-second image spot that aired over 90 times during and around ABC's Summer Olympics coverage.

The image spot for Hanley Dawson's Chrysler - Plymouth, Cadillac - Datsun, Toyota - Saab and Mitsubishi dealerships was shot on location with amateur athletes from a local running club.

Doug Ekman, producer/director for Dawson and Dawson Advertising, Chicago, said, "We surprised some viewers who normally expect to see a harder-selling approach from dealers."

Dawson dealerships received calls and letters of support for its sponsorship.

Chrysler - Plymouth obtained promotional rights to the $3 million Breeders' Cup Classic, seventh and concluding race of the inaugural Breeder's Cup Series.

The thoroughbred racing event will decide championships in virtually every age, sex and distance division within the sport. Seven championships will be held Nov. 10 at Hollywood Park, Inglewood, Calif.

NBC plans a four-hour coverage of the event, to be broadcast nationally and internationally.

American Motors has made its Renault Alliance convertible the official car of next year's Miss America Pageant.

AMC will handcraft 21 of the cars for the Pageant and also will produce 30 Jeep CJs, appropriately painted red, white and blue.

Miss America entrants and officials will parade around Atlantic City in the new vehicles, valued at $800,000.

Several events, such as a caravan driveaway from Woodbury, N.J., to Atlantic City, have been planned around the event.

Two Iowa dealers saw sales take off this summer when they combined ad dollars and "slugged it out" in a friendly sales rivalry.

Dave Brown, Brown Ford-Mercury in Guttenburg, Ia., and Charlie Beckett, Beckett Chevrolet-Oldsmobile, Dyersville, Ia., competed in a four-week verbal sparring match billed as "The Main Event."

Chevy and Ford dealers seldom get together, but the two have been friends for many years. With a combined ad budget of $11,000 they saturated the northeast Iowa market for a month, drawing customers from nearby Illinois and Wisconsin as well.

Both had 30 percent sales increases.

• Dallas-area Ford dealers ran a Sell-A-Thon in Dallas' Market Mall. They called it the most successful private sale the Dallas FDAF ever has had.

Thirteen participating dealers sold more than 50 cars and trucks during the 20-hour event, and followups brought the total to almost 600 vehicles.

TaCito & Associates, a direct-marketing firm in Dallas, organized and conducted the direct-mail and facilities aspects of the event. A direct-mail piece to 250,000 Ford and competitive owners brought 3,000 customers.

Automotive tent sales are alive and well, Harrisburg (Pa.) dealers and others have discovered.

Five years ago, members of the Harrisburg Automotive Trade Assn. initiated what they thought would be a one-time outdoor sale. The "Harrisburg Ten Million Dollar Auto Tent Sale" was so successful it has been staged yearly since then, with increasingly better results.

The event also spawned others. A total of 60-plus carnival-like tent sales have been staged to date in cities like Reading, Wilkes-Barre and Philadelphia, Pa., Wildwood, N.J., and even Houston.

Liberty Productions, Inc., Harrisburg, puts together the tent events. From April through September this year, it said, total sales for the events were often 50 percent over what they were in 1983.

In June, for example, of 13 tent sales held—in Reading and Wilkes-Barre, Pa. — sales increases were 51 and 50.4 percent, respectively, according to Bob Lilley, president of Liberty.

Altogether, 111 dealers participated in these sales, an average of about nine per tent sale. Total number of units sold was 2,878, or about 221 per event. On average, each participating dealer sells about 25 units during the three-day sales, Lilley said.

Turbo mania

Millie Burget, Federal Way, Wash., won an '84 Cordia Turbo hatchback in Mitsubishi's national "Turbo Age Sweepstakes" promotion. Presenting the keys is Tito Roempk, owner of Auburn Valley Mitsubishi, Auburn, Wash. From left are Lynn Welfringer, vice president of Evergreen Mitsubishi, Everett, Wash., and Tim Coleman, general manager of Bellevue Mitsubishi, Bellevue, Wash.

Friendly fisticuffs

John Beckett, left, Beckett Chevrolet-Oldsmobile, Dyersville, Ia., and Dave Brown, Brown Ford-Mercury, Guttenburg, Ia., staged a friendly "Main Event" sparring match, churning up good sales for both. Radio Producer Bob Smtih, center, intervenes in their mock confrontation.

Corolla engine ads

Toyota is promoting its '85 Corolla GT-S with early TV and print ads like this three-pager. It focuses on the new twin-cam, electronic-fuel-injected, 16-valve, 4-cylinder engine, which gives it a 60 percent horsepower boost.

Sorenson signs

John Sorenson signs a Chevrolet sales and service agreement to become the dealer at Nylander & Sorenson, Dos Palos, Calif. Witnessing is R. F. Sobrero, Chevrolet zone manager.

Portlock signs Chevy

Ann Portlock signs a Chevrolet sales and service agreement to become dealer at Chevrolet Center, Winter Haven, Fla. Witnessing are R. J. Bresnahan, left, Chevrolet's Jacksonville zone manager, and C. W. DeWitt, assistant zone manager.

Continued on Page 48, Col. 3

Chrysler recognizes dealer's achievement

Chrysler Corp. Chairman Lee Iacocca, left, honors Herbert A. Abramson, president of Silver Lake Dodge, Wellesley, Mass., recipient of the annual Boston University Alumni Award for Distinguished Service to Alma Mater.

Bidwell is keynote speaker at Northwood auto show

MIDLAND, Mich. — Chrysler Corp. Executive Vice President Bennett E. Bidwell will be keynote speaker and member of a blue-ribbon automotive panel discussion that kicks off the 21st annual Northwood Institute Automotive Industry Show.

The panel discussion will follow the opening ceremony at 1:30 p.m. Friday, Oct. 5.

Speakers include Robert McElwaine, president of the American International Automobile Dealers Assn.; Robert D. Lund, General Motors sales and marketing vice president; Ken Harrigan, president of Ford Motor Co. of Canada, and Peter Guptill, U.S. sales manager of American Motors.

• Also on the roster are Larry Oliphant, Volvo-White Corp. sales vice president; Kenneth L. Rogers, president of Republic Parts and second vice chairman of the Automotive Service Industry Assn.; John J. Ferron, NADA executive director — industry analysis and dealer operations group, and William J. Symes, president of Symes Cadillac, Pasadena, Calif., and NADA first vice president.

The panel discussion will be in the college's Griswold Lecture Hall.

More than 400 cars and trucks will be displayed throughout the campus. An automotive parts show, in the Bennett Sports Center, will feature aftermarket equipment and computers.

The show is administered, promoted and conducted by students majoring in automotive and truck marketing, management and advertising.

Hours are Friday (Oct. 5), 1:30 to 5:30 p.m.; Saturday (Oct. 6), 11 a.m. to 5 p.m., and Sunday (Oct. 7), 11 a.m. to 5 p.m. Admission is free.

Ford sets up new sales unit for N. Pacific

MELBOURNE, Australia. — Ford Motor Co. has formed a North Pacific subsidiary with the aim of doubling car and commercial vehicle sales in the region, according to the company's Asia-Pacific Operations here.

The subsidiary, with headquarters in Tokyo, plans to enter the markets in Korea, China, Japan, Taiwan and neighboring countries.

Australia currently contributes the biggest share to the Asia-Pacific market, with sales of 225,000 cars and commercial vehicles totaling $2 billion last year.

The rest of the region offers considerable scope for Ford, said Alex Trotman, chief executive of Ford Asia-Pacific. "There will be rapid growth, for example, in Korea, which has a market now of about 200,000 vehicles a year and is likely to increase by at least 10 percent a year," he said.

He also indicated Ford would be interested in forming a joint venture in Korea, in which complete vehicles or major automotive components could be built and exported.

Corey's breaks ground

BINGHAMTON, N. Y. — Corey's Northgate Ford, Inc., here, has broken ground for a new 24,000-square-foot facility next to its existing Corey Mazda dealership.

25 years in Texas

James A. Tipton, right, Tipton Ford, Nacogdoches, Tex., receives a silver anniversary award from Ford Motor Co. Houston District Sales Manager Thomas B. Ryan Jr.

Auto output approaches normal pace

Overtime overcomes strike's effects

By Louise Kertesz
Detroit Reporter

The General Motors strike resulted in the lowest weekly auto production since mid-July.

During the week ended Sept. 22, 109,464 cars were built, the lowest output since 95,018 cars were assembled during the holiday week ending July 7.

Last week's slated production of 157,507 cars was a 43.89-percent jump over the previous week's low, but still 3.08 percent behind the year-ago week when 162,520 vehicles were completed.

Lingering effects of the strike last week included a dip in production at Chevrolet, due to the Van Nuys (Calif.) plant returning to work later than the other striking facilities.

Scheduled daily or weekly overtime at 15 auto plants last week contributed to resumption of normal production pace.

This year, 5,882,302 cars have been built, up 19.60 percent from the 4,918,134 assembled last year at this time.

GM plants working two overtime shifts Saturday (Sept. 29) were Arlington, Tex.; Fairfax, Kans.; Flint (Buick B and G lines); Framingham, Mass.; Lansing (Oldsmobile Line 1), and Leeds, Mo.

Working one overtime shift Saturday were Lansing (Oldsmobile Line 2); Orion, Mich., and Van Nuys.

Saturday overtime was also scheduled at Ford's Kansas City and Wayne (Mich.) assembly plants.

Last week, Chrysler's Belvidere (Ill.) and St. Louis No. 2 plants each worked two nine-hour daily shifts. The Jefferson Ave. (Detroit) plant worked two 8½-hour daily shifts.

Two eight-hour overtime shifts were scheduled Saturday for Chrysler's Belvidere, Newark (Del.), and St. Louis No. 1 and 2 facilities.

Framing operations for the production of the new H-cars began last week at Chrysler's Sterling Heights (Mich.) plant.

AMC is halting Renault Alliance and Encore production at Kenosha for one week starting today (Oct. 1) because of high inventories.

The GM Van Nuys facility went down today (Oct. 1) for model changeover. Production will resume Oct. 8.

Chevy chooses computers over model deproliferation

Continued from Page 8

tomer satisfaction," Burger said.

"We lost a lot of penetration over the last few years. But quality is improving. It is not what anyone wants at this time or what our customers expect," but it will continue to improve, he said.

"Aggressiveness cannot start without product leadership," and the division "has the opportunity and the resources and now the people and ability to achieve" its goal of continued sales leadership and 20 percent of the market, he said.

• Chevrolet is testing a toll-free number for customer communications. It began what it calls a Commitment to Excellence program that is being explained in dealership meetings.

It includes an exhaustive pre-delivery check of the car, a test-drive and gasoline fill-up of the new car at delivery time by the salesman and customer and follow-up literature and services that keep the dealer involved with the customer for two years.

In addition, Chevrolet surveys every buyer 60 days after the purchase on the car's condition, service and the sales process.

The program is just part of the retail-level changes that will match GM's internal reorganization in scope, Burger said.

Another prototype shown to reporters was the Dealer Communication Services (DCS) computer, developed with Reynolds & Reynolds. It will connect into the present Vehicle Locator System that allows a dealer to order from the factory or find a vehicle in another dealer's inventory.

It also will be a sales tool, complete with video disk graphics, that will allow the customer to compare Chevrolet products to the competition, price and equip a car, figure out tradein and payments — even deliver a sales contract for signature.

• A Reynolds & Reynolds spokesman said the company expects 1,200 to 1,500 of the largest Chevrolet dealers initially will buy or lease their own units; the remainder of Chevy's 5,000 dealers will be able to get telephone access to a central computer that will provide the same services. No price has been determined for the units, Chevy and R&R representatives said.

Truck production hits 64,783; best week since June

U. S. truck production has rebounded to normal schedules following the strikes at General Motors plants.

This means weekly output reached sixty-thousand for the first time since June.

Last week, production was pegged aat 64,783, 23.41 percent better than the previous week's 52,494 and 20.24 percent higher than the year-ago week's 53,878.

So far this year, 2,333,552 trucks have been assembled, 36.83 percent more than the 1,705,497 built at this time last year.

GM scheduled two overtime shifts Saturday (Sept. 29) at its Janesville (Wis.) and Lordstown (O.) facilities and one shift at the Pontiac coach plant.

Also working Saturday were Ford Motor Co.'s Kansas City and Wayne (Mich.) facilities.

Chrysler Corp.'s Warren (Mich.) plant worked two nine-hour shifts last week.

Car production in Canada nears 800,000 mark

Canadian car production maintained steady gains last week and is approaching the 800,000 mark.

Slated production of 22,646 cars was up 23.86 percent over the previous week's 18,283 and 19.86 better than the year-ago week's 18,893.

So far this year, 796,869 cars have been assembled, 11.43 percent more than last year's 715,159.

Makers expected to complete 18,099 trucks last week, an increase of 1.50 percent over the previous week's 17,831 and 42.64 percent better than 12,689 a year ago.

Chrysler's Windsor (Ont.) facility targeted assembly of 2,332 Plymouth Voyagers, 2,359 Dodge Caravans and 949 Mini Ram Vans last week. So far this year, 169,820 T-115s have been built.

60th year—$40 per year, $1.00 per copy

But dealers are less pleased with supply of cars

Optimism in good supply for 1985 season

By Richard Johnson
Detroit Reporter

While new model introductions this fall aren't raising dealership roofs with excitement, an AUTOMOTIVE NEWS survey of retailers around the country turned up plenty of optimism about the 1985 model year.

U.S. manufacturers have little in the way of new models to show customers—at least for the traditional new-car intro period. Buick, Pontiac and Oldsmobile have unveiled their GM20 cars, and AMC has introduced the U.S.-built Renault Alliance convertible.

But Chrysler's new intermediates, the Dodge Lancer and Chrysler LeBaron GTS, won't arrive until January, the Merkur XR4Ti being imported from Germany by Lincoln-Mercury isn't coming until early 1985, and the new Volkswagen Golf isn't due until later this fall.

As a result, the model year launch has lacked some of the drama and luster of years past. Furthermore, several retailers last week reported tight supplies of new '85s, especially the new vehicles figured to attract most of the early attention and generate showroom traffic.

But despite the low-key 1985 sendoff, dealers see no end to the sales boom. There is overwhelming confidence in the new models and the new model year.

"The intros have lost some of their magic," said Jim Barry, general manager at Broadway Chevrolet, Louisville. "It's not like 20 years ago when they covered up the new cars."

Supply problems are also stifling some of the new-car announcement enthusiasm, according to Gary McCaddon, of McCaddon Olds-Cadillac, Boulder, Colo., who decried a shortage of the new Olds Calais.

"Some dealers don't even have them out here in the West," he said. "It is a typical GM announcement—all screwed up."

But McCaddon said customers who have seen the one Calais sitting on his lot love it, and he predicted that the car will be a sales success.

Elmer Maxwell, general manager at Bill Davidson Buick in

Britain's 'Spridget'

Reliant SS-1 debuts

The Reliant SS-1 sports car, which will be displayed at Britain's International Auto Show this month, is sort of a cross between the MG Midget and the Triumph Spitfire. It was designed by Michelotti of Italy and uses Ford 1.3-liter and 1.6-liter engines. The SS-1 is scheduled to reach the U. S. in 1986.

breaking news

Ford's Benton to join British Car Auctions

LONDON. — William P. Benton, 60, Ford Motor Co. marketing vice-president, will retire Nov. 1 to become deputy chairman of British Car Auctions Group and chairman of the firm's U. S. subsidiary, Anglo-American Auto Auctions. British Car Auctions operates 15 auctions in the UK and 12 in the U. S. through Anglo-American. It also holds voting control of Group Lotus Car Co's., Inc. Ford named B. J. Coughlan executive director of the Marketing Staff to replace Benton. Coughlan has been L-M general sales manager.

Chevy Astro introduction delayed

DETROIT.—Chevrolet is running into supply problems on its new compact Astro van which will push back the introduction beyond Nov. 15. Only about 100 units have been built so far. Prices were slated to be released Oct. 12, but there may be a delay because of the production holdup.

Espace only first of new U. S. line for Renault

PARIS.—Renault Group President Bernard Hanon confirmed persistent rumors that the new Alpine sports car, due out within months, will be sold in the U. S. The Espace van, slated for the U. S. in 1986, will be just the first of a series of small-volume exports for the U. S., he said. A decision on importation of the R-25 sedan will be made at the end of the month, he said.

Yugo America selling stock

By John A. Russell
New York Staff Writer

NEW YORK. — Two million shares of Yugo America, Inc., worth $6 million, are being sold through private placement as the company begins the first phase of an overall financing plan which will eventually see it go public.

According to Malcolm Bricklin, chairman of the board, the private stock placement began last week and he hopes to have this phase completed by the end of this month.

Each share sells for $3 and the two million shares represent 20 percent of Yugo America. The name of the company has been changed from Yugo of America, Bricklin said.

The shares are being sold in $500,000 blocks and Bricklin anticipates eight to 12 investors.

Each person will be given a

Domestic cars post increase of 22 pct. for '84 model year

By Jenny L. King
Staff Writer

Again the record books were opened in 1984, this time by some of the domestic auto makers as they tallied their model-year sales and entered some impressive gains in the sales numbers columns.

The grand total for the industry, Oct. 1, 1983, through Sept. 30, 1984, was well above the 10-million mark. The six major U. S. makers combined for a 22.23-percent increase in sales; imports were up 6.57 percent.

Import penetration plunged more than 2.5 percentage points year to year. Imports captured 23.97 percent of the 1984 model-year total compared with 26.55 percent of the 1983 model-year total.

The 1984 grand total soared to 10,409,785, up 18.08 percent from 8,816,028 in 1983. Domestic sales climbed 22.23 percent, to 7,914,732 from 6,475,150. Imports signed in at 2,494,053 in 1984, up 6.57 percent from 2,340,878 the preceding year.

All the domestic makers came in above '83 sales levels except Volkswagen, which missed by only 0.09 percent. Ford Motor Co. enjoyed the largest Big Three gain, up 28.72 percent. General Motors was up 20.22 percent, Chrysler Corp. was up 15.55 percent, American Motors was up 9.98 percent and Honda sales exploded 261.69 percent.

• Humility was nowhere to be found among the U. S. auto makers. Oldsmobile and Buick engaged in a shoving match to get to the microphone to announce their model-year sales records. Oldsmobile dealers broke the one-million barrier and erased their 1977 record. The Olds total was 1,098,685 for 1984; in '77 it was 1,007,201.

Buick wasn't too far behind, with its record sales of 940,611. It was up 16.06 percent from 810,435 a year ago, the former record for a model year.

Pontiac claimed its 37.76-percent increase was "largest . . . of any domestic car division, and the best model year in sales for Pontiac since 1979."

AUTOMOTIVE NEWS' charts put AMC's Renault a short distance ahead of Pontiac, with the Renault Alliance/Encore increase at 38.24 percent in 1984.

Chevrolet was up 21.34 per-

Revolution delayed; Van Doorne blamed

CVT encounters host of problems

By Richard Feast and
Wim Oude Weernink

LONDON. — Production of the stepless CVT gearbox which was to revolutionize automatic transmissions has been delayed by a year. There are now serious doubts about whether the early hopes for the unit will ever be realized.

Ford of Europe and Fiat Auto, which planned to offer the option on their Fiesta and Uno models last June, will now be unable to do so until late next summer.

General Motors' Hydra-matic Division was to have launched its version in the middle of next year, but that, too, has been delayed by a year or more.

The problems stem from major difficulties at Van Doorne Transmissie, of Tilburg, Holland, which has been developing the current CVT principle for more than 12 years.

An early casualty at VDT was Dick Hamstra Pik, the managing director since the project began. He was forced to retire last March amid accusations of mismanagement. He was replaced by the former commercial director, Joep Van Ham.

The charge leveled at VDT is that while research and development on the CVT took place over more than a decade, when it was ready for mass production — this year — there were no facilities available to do so.

And yet VDT was sitting on component orders from Ford and Fiat worth around $30 million. VDT could not even start small series production, and clients were asked to wait.

A report by Bureau Berenschot, an independent management advisory team, was begun under Hamstra Pik. It continued under Van Ham. Its findings were discussed in mid-September by VDT shareholders, under the chairmanship of Andre Deleye, chairman of Volvo Car BV.

• Volvo Car is the major shareholder in VDT with 39.54 percent. Fiat Auto and Borg-Warner have 24 percent each, and

Incentives, rebates and low-interest programs launched

By Joseph Bohn
Marketing Editor

Chrysler Corp. will take 310 sales managers and their companions on a five-day/four-night trip to Super Bowl XIX as part of its continuing effort to hype sales. Cash awards of up to $1,500 are also being given.

Chrysler also is offering consumer rebates and dealer incentives on domestic trucks and an interest subsidy on imported trucks.

Elsewhere, Ford Division is paying cash incentives to sales managers on 1984 and 1985 Tempo and Escort models, and American Motors has adopted an interest subsidy program.

Dodge sales managers have been divided into 150 groups nationally under its "San Francisco Goal Rush" incentive with one winner slated for each group. Chrysler - Plymouth managers are divided into 160 groups under a corresponding "March to Goal" program.

Both trip programs run from Sept. 21 to Nov. 30. The Super Bowl is scheduled for Jan. 20 in Palo Alto, Calif.

There is a separate Sept. 21 to Dec. 10 cash award program that gives winning managers a chance to collect an extra $1,500, $1,000 or $500 in cash, depending on which of three flights they are assigned to.

Flights are based on the size of dealership sales objectives.

Sales objectives for the trips are based on all new and unused '84/'85 domestic cars and trucks, including dealer demos, sold or leased and delivered during the program period.

Managers earn double credit for delivering the new '85 Aries and Reliant K-cars. Chrysler tries to give them an extra boost.

All dealerships must sell a minimum of 25 units to qualify for trips. High-over-objective in each dealership group wins the trip.

Cash awards require a minimum sale of 15 units. They are based upon sales of '85 cars and trucks only. Managers must hit at least 100 percent of a separate cash award objective to win the money. Only trip winners qualify for cash.

No cash or other award will be made in lieu of any trip award.

• Chrysler's "Payload Payoff" on two-wheel-drive and four-wheel-drive D/W 250 and 350 pickups offers $300 consumer rebates on '84 model pickups sold and delivered from Oct. 1 to Dec. 31.

The rebates are fully funded by Chrysler and are paid directly to customers or may be assigned to dealers by the customers.

For '85 model D/W 250 and 350 models, Chrysler is paying dealers $250 per retail unit, after a one-unit no-pay qualifier.

On imported trucks, Chrysler has an Oct. 1-Dec. 31 program that offers 8.7 percent APR financing on '84 Ram 50 and Power Ram 50 trucks sold and delivered during the peri-

Chrysler expands warranty on two top-line models

DETROIT. — Chrysler Corp. has expanded and extended the warranty coverage on the rear-wheel-drive Chrysler Fifth Avenue and front-wheel-drive Chrysler New Yorker for 1985.

In addition to the 5-year/50,000-mile powertrain warranty, coverage on the models has been broadened to include the following major components: Air conditioning; front suspension; cooling system; brakes, fuel tank, pump and line; steering, electrical, and the electronic instrument cluster on the New Yorker.

For the Fifth Avenue, coverage on the additional components has been increased from 12 months/12,000 miles to 5 years/50,000 miles, whichever comes first, while the coverage for the New Yorker is for 3 years/36,000 miles. Under the new warranty, each repair visit carries a $100 deductible after 12 months/12,000 miles.

As with its past powertrain warranty, Chrysler told dealers that this additional coverage applies to the first retail purchaser, but the unexpired powertrain and major components coverage may be transferred to a second purchaser for a $25 fee.

Although warranty coverage on its other domestic cars is essentially the same as for 1984, Chrysler said coverage of policy adjustments on all domestic cars and trucks has been extended from 90 days to 12 months/12,000 miles for 1985.

Domestic trucks also have a 5/50 powertrain warranty and 5/50 outer panel rust-through protection for '85 (Automotive News, Oct. 1).

Front-drive Cadillac limo bows

Armbruster/Stageway, Inc., Fort Smith, Ark., has introduced a six-door limousine built on the 1985 Cadillac C-body chassis. The limo features three bench seats, dual heat and air conditioning systems, padded vinyl roof, matching interior appointments and numerous other standard features.

Turbo police package is Chrysler project

By Dan McCosh
Detroit Reporter

Chrysler insiders say the corporation is working on a special turbocharged police-special version of the 1986 E-body to replace the V-8 Police Package that will expire with the pending demise of Chrysler's rear-drive M-body.

The new engine will mark the end of a long series of V-8 Dodges and Plymouths long favored by lawmen. Chrysler sold 17,669 squad cars in the 1984 model year, the bulk of them V-8 powered, rear-drive cars.

The current Police Package features a 175-HP, 5.2-liter V-8 with a 4-barrel carburetor, heavy-duty suspension and two outside rear-view mirrors.

It is tentatively slated to be replaced late in 1986 by a special 160-HP turbocharged version of the 2.2-liter 4-cylinder engine in a specially equipped front-drive E-car.

The new engine will burn regular unleaded gas, a feature demanded by most police departments, thus will be slightly less powerful than some of Chrysler's production turbos, according to Chrysler sources.

In the lighter car, acceleration is anticipated to be superior to the current V-8 powered 3,553-pound Plymouth Gran Fury.

VW cuts some prices; other imports raised

Volkswagen raised some prices and reduced others as it placed the '85 stickers on most of its imported lines.

Still to be priced are the new Golf, which is made in the U. S., and the new Jetta, which is imported from Germany. They are due in November.

The Scirocco coupe and the Quantum wagon are down. The VW Cabriolet, the Quantum sedans and the Vanagon are up.

Volkswagen of America said the four lines are down an average $24.24, or 0.2 percent, on base vehicles. There's an increase of $14.61, or 0.1 percent on vehicles with average optional equipment.

The whole range of options is up an average of $39.02, or 3.4 percent. In addition, transportation charges have been raised $20.

The Scirocco carries an '85 sticker of $9,980, down $890 from last year. Radio is no longer standard equipment.

Also reduced was the Quantum wagon. It's $11,570, down $2,210 from last year's $13,780. However, a considerable amount of standard equipment has been removed for '85.

The deletions include the five-cylinder engine (a four-cylinder now is standard), radio, power windows, power door locks, power mirrors, alloy wheels, luggage rack and trunk luggage cover.

Quantum sedans have been raised $315. The gasoline model is $13,295 and the turbodiesel is $13,845.

There was a hike of $615 on the VW Cabriolet (formally Rabbit convertible). The '85 price is $12,595.

The seven-seat Vanagon is $12,290, an increase of $380.

Chrysler hike is $125 after option shifts

By John K. Teahen Jr.
Managing Editor

Chrysler Corp., like Ford Motor Co., had second thoughts about its preliminary prices for '84 cars and, like Ford, it managed to shave the average increase considerably.

Chrysler announced last week that its new cars will be up an average of $125, or 1.2 percent, over comparably equipped '84 models. Its preliminary boost was $181, or 1.7 percent.

Ford dipped from a preliminary hike of $225 to a firm figure of $153. General Motors played the game only once and posted an average increase of $292.

There were no boosts in destination charges for the Big Three, although Chrysler had planned a $12 hike when it announced its preliminary schedule. Dealer discounts are unchanged at GM and Chrysler; Ford cut dealer margin one percentage point on most small cars (Automotive News, Sept. 10).

The price increases are for comparably equipped models, and that is a mighty important term. When equipment is added for the new model year, the manufacturer adds the price of that equipment to the year-ago price of the car to produce a comparably equipped model.

It brings some strange results. For example, the '85 Dodge Shelby Charger is stickered at $8,995, up $462 from last year's $8,533. But Chrysler said the price is *down* $548 on a comparably equipped basis.

That indicates that $1,010 worth of equipment has been added to the Shelby Charger for '85. It includes a turbocharged engine and AM/FM/stereo.

Other examples of '85 prices are: The base Plymouth Horizon four-door is $5,999, up $177. Tinted glass now is standard. Chrysler said it is up $76, comparably equipped.

The Plymouth Reliant LE wagon is $8,378, an increase of $191. Chrysler said it is down $131 on a comparably equipped basis.

The Chrysler Laser XE coupe is $10,776, a boost of $240. Chrysler said it is up $146 comparably equipped.

The Dodge 600-ES Turbo convertible is $13,995, up $1,100. AM/FM/stereo now is standard. Chrysler said the price has risen $961, comparably equipped.

The Dodge 600 coupe now is $9,060, an increase of $692. Automatic transmission has been made standard. Chrysler said the price is up $172 on a comparably equipped basis.

Chrysler said there were no increases in option prices except for additions to accessory packages and trim upgrades.

Auto makers find it hard to plot course

Third-World market growing, but unsteadily

By Richard Johnson
Detroit Reporter

While new-car demand in developing nations is expected to increase significantly by the year 2000, U.S. Government analysts say political and economic uncertainties in Third World countries make it difficult for manufacturers to plan for growth in those markets.

Some estimates place completely new annual demand in new markets as high as 20 million units by the turn of the century. Most industry observers agree that future growth in Europe and North America will be restrained, and they foresee a sales shift to the developing world over the next 20 years.

"There is no question that that is where the growth in the world industry is," said a spokesman for General Motors' Overseas Operations.

But the size of the shift is uncertain and it is not clear who will benefit. A report issued by the Canadian Government's Department of Regional Industrial Expansion contends that medium-sized manufacturers throughout the world are in a position to compete effectively

Domestics gain; import market share dips

July registrations at 5-year high

By Jenny L. King
Staff Writer

July new-car registrations for the U. S. were the best for that month in five years and recorded the second highest total of the current calendar year as sales, especially of the domestics, continued at a fast pace.

Just two years earlier, the registrations total was at a 20-year low, 626,321, compared with a healthy 903,390 sum this July. The month was up 14.50 percent from the year-ago 789,016 total; it was down slightly—2.64 percent—from June's 927,849.

Record for the month was 1,103,143, set in the boom year of 1973.

Imports in July dropped 2.85 percentage points in market penetration, though their numbers were up 2.68 percent, to 224,103 from 218,264. Their share was down to 24.81 percent from 27.66 percent.

Domestic registrations of 679,287 were up 19.02 percent from 570,752 in July of 1983.

All four major domestic makers took advantage of the imports' lag, with each picking up an additional piece of the total market. General Motors was up 1.28 percentage points July to July, to 45.69 percent from 44.41 percent.

Ford Motor Co. was up 0.99 percentage points, to 18.38 percent from 17.39 percent. Chrysler Corp. gained 0.38 percentage points, moving up to 9.31 percent from 8.93 percent, and American Motors was up 0.21 percentage points, to 1.81 percent from 1.60 percent.

Miscellaneous domestic makes had no share of this July's market and 0.01 percent last year.

• Domestic new-car registrations in July were up 19.02 percent compared with the same month, 1983. They were off 3.50 percent from 703,901 in preceding month.

The July market-class breakout was imports at 24.81 percent, intermediates at 25.34 percent, compacts at 19.21 percent, subcompacts at 11.71 percent, standards at 11.02 percent and luxury models at 7.91 percent.

A year ago, imports claimed 27.66 percent, followed by intermediates at 26.36 percent, compacts at 17.08 percent, standards at 13.11 percent, subcompacts at 10.83 percent and luxuries at 4.96 percent.

Excluding imports, the July, 1984 market spectrum was: Intermediates at 33.69 percent, compacts at 25.55 percent, subcompacts at 15.58 percent, standards at 14.66 percent and luxuries at 10.52 percent.

Registrations for the first seven months of 1984 were up 14.98

Table on Page 67.

percent over the preceding year's total, and they were 34.38 percent ahead of the 4.4 million registrations for the like period, 1982.

The sum at the end of July, including domestics and imports, was 5,918,799, almost a million units up from 5,047,873 in 1983. Two years earlier, 4,404,430 new cars were registered through July.

The imports' share was off 3.87 percentage points, down to 24.03 percent from 27.90 percent. Imports totaled 1,422,531, up 1.00 percent from 1,408,451.

Domestic registrations January through July were up 23.54 percent, to 4,496,268 from 3,639,422. The total was up 44.05 percent from 3,121,398 in 1982.

GM and Ford were the big winners in the year-to-date total market, with GM gaining 2.39 percentage points and Ford up 2.09 percentage points. GM claimed 45.87 percent, up from 43.48 percent a year earlier, and Ford grew to 18.86 percent of the total from 16.77 percent.

Chrysler was off 0.23 percentage points, to 9.40 percent from 9.63 percent and American Motors dipped 0.37 percentage points, to 1.84 percent from 2.21 percent.

Miscellaneous domestics, with only 160 cars registered in seven months, slipped to 0.00 percent of the market from their previous toehold of 0.01 percent.

Oklahoma slates hearing on gray-market vehicles

OKLAHOMA CITY, — The Oklahoma Motor Vehicle Commission will conduct a hearing on gray-market vehicles Oct. 11. Import auto firms, auto dealers, representatives of automotive trade associations and members of the motoring public will testify.

The dealers and their manufacturers asked for the hearing to discuss the implied-warranty and safety-related problems.

Gray-market cars are those not normally imported into the U. S. by their makers because of U. S. safety and emissions regulations but which are brought in by independent importers or individuals who modify them to meet U. S. Government requirements.

New-car dealers oppose the practice because it takes sales away from them. Manufacturers oppose the practice because they frequently are left holding the bag if something goes wrong with the car.

Oklahoma is the first state after California to investigate the gray market, although California's efforts relate strictly to the negative impact on air quality (gray-market cars are not certified to the same stringent air quality standards as are vehicles imported by manufacturers).

The Oklahoma Motor Vehicle Commission hearing will be held in Room 419-C of the state capitol and will begin at 9:30 a.m.

Individuals, associations or firms that wish to appear before the commission and present testimony or documentation are asked to contact the commission at (405) 521-2375, or write to Jerry Cook, Executive Director, 4400 Will Rogers Parkway, Suite 215, Oklahoma City, Okla. 73108.

Green is silver

Bud Ward, distributor reach settlement

IAI deal becomes service point

By John Russell
New York Staff Writer

The world turns strangely for Bud Ward, president of Bud Ward Volkswagen, of College Station, Tex., an International Automobile Importer (IAI) dealer who asked to be terminated.

He changed his mind about termination after Gulf States Imports, Inc., the distributor for the Bertone and Pininfarina cars in his area, wouldn't buy back his parts and cars (AUTOMOTIVE NEWS, Sept. 17).

The distributor didn't have to buy them. In a letter dated Sept. 18, Ward asked that his request for termination be rescinded.

Gulf States would not agree. But it did offer to keep Ward as a warranty service center until another dealer is appointed in his area.

In a letter to Ward, John E. Trotman, general manager of Gulf States, said it would continue to authorize the dealership to do warranty work for 90 days.

Ward told AUTOMOTIVE NEWS that because Gulf States was not going to buy back his inventory, he felt that the warranty-only outlet status was the best move he could take under the circumstances.

Trotman said, "If we were further along we would have replaced him" altogether. Previously, he had told AUTOMOTIVE NEWS that the distributor was sorry to lose Ward as a dealer.

Trotman said the major problem confronting his distributorship is a lack of commitment by dealers. Dealers are not advertising or selling the cars, he said. Trotman also said Ward did not erect his IAI sign.

Gulf States towed a car from Galveston through Houston to the Ward dealership "in an attempt to satisfy both you and your customer," Trotman said in a letter to Ward obtained by AUTOMOTIVE NEWS. The car should have been taken to Houston, not to the Ward location, 90 miles further, he said.

Ward had cited problems with warranty claims in his initial complaint. Trotman said the complaint stemmed from this incident and a warranty claim that was improperly completed.

Trotman said the company has agreed to help Ward sell his cars and when another dealer is in place in the area, it will help him sell the parts.

Ward said that the fact that Gulf States does not want to reappoint him "is fine."

MIA extends coverage in new service contracts

ENCINO, Calif. — Mechanical Insurance Associates, Inc. (MIA) has introduced a new series of service contracts which it says includes "the most extensive coverage" it has ever offered to vehicle owners.

The service-contract program, called GEM, "is the most advanced available anywhere," David Walker, MIA president, said in announcing the new contracts.

According to Walker, MIA has taken "everything it has developed" since entering the service-contract business 27 years ago, "examined the coverage offered elsewhere and designed a program that covers more than any other plan anywhere for virtually every car domestic and import."

"GEM is a totally new contract from top to bottom," said MIA Vice President David Burkhart. "We've designed it to offer the most comprehensive breakdown coverage possible."

GEM's new-car coverage is said to include gasoline, diesel and rotary engines; transmission; front wheel drive; rear-wheel drive; cooling and fuel systems; steering; front and rear suspension; brakes; electrical system; air conditioning, and the exterior from the front bumper energy absorber to the trunk latch assembly.

• The electrical system coverage, Burkhart said, is the largest and most complete anywhere.

GEM provides electrical system coverage in some 45 categories, ranging from starter motor, voltage regulator and computerized mixture control unit to radio and speakers, electronic instrument cluster, electric mirror motor, turn-signal switches and electronic combination entry system, he said.

Towing coverage will pay any amount it takes to tow a car back to the selling dealer if it's within a 50 mile radius, Burkhart said.

MIA also will pay a maximum of $75 outside a 50-mile radius or if the car is towed to a location other than the selling dealer.

Car rental coverage has been nearly doubled, to $25 per day for seven days under GEM, Burkhart said.

According to Burkhart, GEM's new Class 1A coverage is for any manual transmission automobile with an engine of less than 1.8 liters, at a cost of $75 for a five-year, 50,000-mile service contract.

From this base, he said, the GEM program extends upward through Class 5 vehicles and includes such cars as the Corvette, Porsche, Maserati Biturbo and Audi Quattro.

Following test marketing in Texas, Colorado and Minnesota, Burkhart said, GEM was officially introduced recently in California.

"Illinois will be the next state where GEM will be offered," Burkhart said. "We intend to make the program available in all 50 states."

GEM coverage for used cars "on a similarly wide-ranging level, currently is being prepared for introduction," Walker said.

Miller to manage Metro Auto Auction

KANSAS CITY. — Richard Miller, formerly of Minneapolis Northstar Auto Auction, has been named general manager of Metro Auto Auction here. Assisting Miller is Nick Snow, formerly of Nashville Auto Auction.

Metro Auto Auction, Nashville Auto Auction and Minneapolis Northstar Auto Auction are members of the Anglo American Auto Auction group of 11 U. S. auto auctions.

New with Pontiac

James B. Wilson, Wilson Sales Co., Inc., signs a new dealer agreement with Pontiac in Council Grove, Kans. Looking on is Donald H. Fielder, Kansas City zone car distributor.

Ford says thanks to Virginia

Attributing recent Ford light-truck sales gains in Virginia partially to the state's "We Have It Made In Virginia" campaign, Ford Division Washington District Sales Manager Richard O. Davis, second from left, presented a plaque to Virginia Gov. Charles S. Robb, center, at a luncheon to kick off the campaign in northern Virginia. Joining in the festivities were C. S. Kortier, left, Ford Division Northeast regional sales manager; Senator John Warner, Virginia Republican, and Linda Wright, northern Virginia chairman of the Virginia products recognition program. Ford builds its F-150 pickup truck in Norfolk.

Beauty queens in 26 cities help AMC sell cars

ST. LOUIS. — American Motors is relying on pulchritude to help sell its new cars.

The Renault Alliance DL convertible was the official vehicle of the Miss America Pageant, which was held in Atlantic City.

Now, AMC is arranging special appearances by state beauties at 50 malls in 26 cities nationwide, through mid-November.

Among those, Miss Illinois, was on hand for a Renault show at the Alton Square shopping center, in cooperation with Hutton AMC-Jeep-Renault of Wood River.

In Missouri, Anna Maria Schell, Miss Missouri, joined in the AMC New Vehicle Show in the Jamestown Mall, North St. Louis County, in cooperation with Royal Oaks AMC-Jeep-Renault.

The public was collecting autographs as well as literature on the '85 AMC car line.

Diesel technology and timetables conflict

Soot problems are tough to solve

By Roger Rowand
Engineering Editor

LANSING. — Diesel power is selling like sand in the Sahara right now, but engineers around the world are going all-out to solve the problems the engine is having in meeting soot emissions standards.

Those problems could knock most diesels out of the U. S. passenger-car and pickup-truck markets, first in California, then the rest of the country.

In the 1985 calendar year, diesel cars sold in California must meet a particulate standard of 0.4 grams per mile, 0.2 gpm in '86 and one of 0.08 gpm by 1989.

In 1987, a similar federal standard goes into gear and the soot situation assumes critical proportions.

Right now, diesel technology in the U. S. generally can bring particulates to a 0.4 gpm level but, as a rule, diesel cars on the road emit 0.6 gpm, engineers say.

In the diesel game, they're saying they expect California to settle on a compromise of some sort.

"We're talking about that limbo land of 0.2 gpm in California and 0.4 gpm which we can do," said Ted N. Louckes, Oldsmobile chief engineer.

At a recent West Coast press preview, Mercedes-Benz was scheduled to introduce a system it said will meet the California rule for '85.

It consists of a ceramic honeycomb trap coated with a chemical that oxidizes the soot as the car is driven.

That development appears to put the German luxury car maker well ahead of its competitors.

Louckes, for example, said General Motors does not expect to have anything capable of meeting the increasingly tough standards before 1989.

It is expected that other diesel engine makers, including GM, will use trap technology as well.

Such traps generally collect particulates until exhaust back pressure becomes critical. Then, particulates are either burned up spontaneously or touched off by an ignition system.

All the while, of course, the emissions standards must be met.

Volkswagen has developed a trap and additive system it says is promising and GM appears to be taking the same route.

"You almost have to have an additive to get the incineration on a reasonable basis. We don't want to fire up very big without it," Louckes said.

GM will put its additive into the fuel tank in a maintenance dose technique.

"We have to sense how much fuel we add to the tank and then how much additive we'll need per fill and meter out the proper amount," Louckes said.

"It's no small task."

Still another sensor will tell the system when exhaust gas back pressure is built up and ignition has to occur reliably.

"All this for 50,000 miles without anything going wrong," Louckes said.

"We're exploiting a great amount of technical resources to address this. It's a lot like what we went through in earlier eras of passenger-car emissions.

"In a situation like this, you're pressing your technological capabilities."

All that is coupled with changing standards, the moving target, an aging bugaboo of emissions control scientists and engineers.

"There's a lot of risk in it to our customers and we're not going to take that risk," Louckes said.

• "If we can't give him something we know is tested and reliable and that will do everything he wants it to — with no excuses — then, by God, we won't sell it.

"We're working very hard to do it. We have both a technical and a timetable shortfall right at the moment.

"In the meantime, we have a very aggressive program to make the diesel more competitive in the future," he said.

That program will lead to a quieter, smoother engine with more specific output and further fuel economy increases, he said.

"It's a very resource-rich activity. You've got to put a lot of heavy-duty people on it and there aren't many in the world who know passenger-car diesel technology," Louckes said.

As one of the lingering effects of Oldsmobile's widely publicized diesel engine problems and an increase in the federal tax on diesel fuel GM isn't selling many of the power plants.

Only 3.50 percent of Cutlass Cieras sold are fitted with the power and, division-wide, only 2 percent of cars sold have diesels.

"It's certainly not encouraging," Louckes said. "For '85 we've priced diesels at the same price level as gasoline engines. That is an important incentive.

"We've literally tried to put it on an equal footing so those who want a diesel can opt for a diesel engine. But, I'm afraid the tendency in the market is just not there.

"Diesel sales for the entire industry are way down and I don't see a recovery in diesel engine sales unless there's a change in national energy policy," Louckes said. "Nothing is being done to encourage the diesel. On the contrary, everything is being done to discourage it."

Ninth year-to-year improvement

Sept. sales rise 5 pct.; imports' gain bigger

By Jenny L. King
Staff Writer

September marked the ninth consecutive month this year in which new-car sales have been up over 1983 and the 19th one since the recession lifted for the industry back in early 1983.

Domestics were up 5.27 percent, to 566,672 from 538,307. Imports moved up 6.67 percent, to 176,968 from 165,899. They accounted for 23.80 percent of the month's market, up from 23.59 percent in 1983.

Industry total in September was up 5.60 percent, to 743,640 from 704,206.

Domestic year-to-date sales pushed to 6,100,590, up 22.48 percent from 4,981,085 in 1983. Import sales for the nine months were up 4.66 percent, to 1,915,885 from 1,830,657. The industry total was up 17.69 percent, to 8,016,475 from 6,811,715. Imports claimed 23.90 percent, down from 26.88 percent in 1983.

In September, General Motors, feeling the effects of the UAW strike, reported a 2.90-percent sales decline, down to 305,203 from 314,315. Volkswagen also was off, down 34.21 percent, to 4,814 from 7,317, as Rabbit sales limped along prior to the introduction of the new Golf later this year.

Ford Motor Co. sales were up 17.67 percent, to 157,021 from 133,442. Chrysler Corp. sales of 74,530 were up 16.34 percent from 64,061. American Motors missed its 1983 level by 4.72 percent, dipping to 13,439 from 14,105, and Honda more than doubled its total, going to 11,665 from 5,067.

GM plunged to 53.86 percent of the domestic market from 58.39 percent. Ford was up to 27.71 percent from 24.79 percent. Chrysler claimed 13.15 percent, up from 11.90 percent. AMC dropped to 2.37 percent from 2.62 percent, VW was off to 0.85 percent from 1.36 percent and Honda earned 2.06 percent compared with 0.94 percent.

With 24 selling days this September, the domestic daily rate was 23,611.

Import sales included records for the month for BMW, Peugeot, Mercedes-Benz, Mitsubishi, Saab and Volvo.

Third-quarter domestic sales were up 12.64 percent, to 1,854,247 from 1,646,131 last year. Imports were up 0.76 percent, to 594,178 from 589,722.

Model year closes with 10.4 million sales; U.S. slice up

Continued from Page 1

cent for the model year, Cadillac was up 12.91 percent.

At Ford Motor Co., Ford was up 26.67 percent, Mercury was up 33.79 percent and Lincoln was up 29.84 percent.

Chrysler was up 29.47 percent, Dodge climbed 14.53 percent and Plymouth was up 4.75 percent.

The domestic model year was pieced out in this fashion for 1984: GM earned 58.88 percent, Ford had 24.09 percent, Chrysler had 11.96 percent, AMC had 2.54 percent, VW had 1.05 percent and Honda claimed 1.48 percent.

In 1983 the breakout was as follows: GM at 59.86 percent, Ford at 22.88 percent, Chrysler at 12.65 percent, AMC at 2.83 percent, VW at 1.28 percent and Honda at 0.50 percent.

• The five major Japanese imports combined for a 17.47-percent share of the total 1984 market. A year earlier the big five — Toyota, Nissan, Honda, Mazda and Subaru — held 18.21 percent of the total.

In 1984, Toyota was up 4.67 percent, Nissan declined 9.25 percent, Honda was 28.87 percent ahead of its '83 import sales, Mazda dropped 3.61 percent and Subaru missed by 1.86 percent.

European imports accounted for the difference when the Japanese were down. Audi was up 47.26 percent, BMW was up 18.01 percent, Mercedes was up 41.0 percent, Volvo was up 21.77 percent and Volkswagen imports were up 40.37 percent.

Six weeks ahead of last year

Makers build 6-millionth car of '84

By Louise Kertesz
Detroit Reporter

The six-millionth car built in 1984 was completed on Oct. 4, six weeks ahead of the 1983 pace, as total auto production for this year climbed to 6,053,887.

But 2.96 percent fewer cars were built in September than August (542,585 vs. 559,137), and last month's total trailed last September's output of 663,210 by 18.19 percent. The General Motors strike was a major factor.

Targeted production of 165,475 cars last week held steady at 1.14 percent above the previous week's 163,616 and 0.93 percent over the year-ago week's 163,949.

The year-to-date total of 6,053,887 cars assembled was 19.23 percent higher than last year's 5,077,298.

Companies' share of last week's slated production was: General Motors, 55.65 percent; Ford Motor Co., 24.97 percent; Chrysler Corp., 17.04 percent; Honda, 1.80 percent, and Volkswagen of America, 0.54 percent.

AMC stopped production of Renault Alliance and Encore at Kenosha last week to adjust inventories. Production resumes today (Oct. 8).

Two overtime shifts were scheduled for Saturday (Oct. 6) at GM plants in Flint (Buick B and G lines), Lakewood (Ga.), Lansing (Oldsmobile Line 1), and Oklahoma City. One shift was scheduled for Oldsmobile Line 2 in Lansing.

Ford Motor plants working Saturday were Edison (N. J.), Kansas City, Wayne (Mich.) and Wixom (Mich.)

Chrysler plants working two nine-hour daily shifts last week were Belvidere (Ill.), Newark (Del.) and St. Louis No. 1 and 2. The Jefferson (Detroit) plant worked one 8½-hour daily shift last week. All five plants worked two eight-hour shifts last Saturday.

GM's Janesville (Wis.) facility is down until Oct. 16 for model changeover.

GM's Van Nuys plant, originally scheduled to resume production on Oct. 8 following model changeover, is down until Oct. 15.

LewBar Imports builds

SPRINGFIELD, Mass.—LewBar Imports, a Mercedes-Benz dealership here, is building a showroom and service center in suburban West Springfield at a projected cost of $450,000.

AMC, Chrysler Corp., Ford launch incentive programs

Continued from Page 3

od. Vehicles must be financed through Chrysler Credit to qualify for the lower interest rate.

Ford Division launched an Oct. 4 to Dec. 3 sales managers' contest on '84/'85 Tempo and Escort, with retroactive payments.

Managers receive payments on units sold and delivered, based on percent of accomplishment, in the following amounts: 0-50 percent pays nothing; 50.1-70 percent pays $10 per unit; 70.1-120 percent pays $20 per unit and 120.1 percent and over pays $30 per unit.

If managers hit the $20 payoff level, they earn that amount retroactively to the first unit they sold. If they hit the $30 payoff level, they receive that amount retroactively back to the first unit. There is no retroactive payment at the $10 level.

The AMC interest program offers 10.9 percent financing on '84 and '85 Encore and Alliance models bought out of stock and retailed from Oct. 3 to Oct. 31.

Dealers participate through American Motors Credit Corp. or local banks. AMC buys down the contracts.

New with Pontiac

MANHATTAN, Kans.—Leroy Elkins has signed a Pontiac sales agreement for Elkins Motor Co. here.

Auto production in Canada passes 800,000 for 1984

Canadian car production for the year topped 800,000 last week, four weeks ahead of last year's pace.

And the 67,957 trucks built last month were an alltime record for September.

The year-to-date total of 817,845 cars assembled is 11.41 percent higher than the 734,054 units built a year ago.

Makers targeted assembly of 23,160 cars last week, 13.19 percent more than the previous week's 20,462 and 22.07 percent better than the year-ago week's 18,972.

September production of 70,335 cars was down 1.34 percent from August's 71,287 and also down 3.70 percent from last September's 73,038.

Eagle production was halted at American Motors' Brampton (Ont.) plant last week to adjust inventories. Production resumes this week.

The industry slated production of 16,347 trucks last week, down 9.19 percent from the previous week's 18,002, but 43.77 percent over the 11,370 trucks built during the same week a year ago.

The September record total of 67,957 trucks built was 6.71 percent higher than August's 63,683 and 30.63 percent better than last September's 52,021.

Total Canadian truck production for the year now tops six hundred thousand (622,138), well ahead of 1983's total of 560,864 for the full year.

Chrysler's plant in Windsor, Ont., targeted completion of 1,955 Plymouth Voyagers, 1,960 Dodge Caravans and 785 Mini Ram Vans last week, a slower production schedule due to the Thanksgiving holiday.

Truck production for September is highest since '78

Completing 236,756 units, U. S. truck makers had their best September since 1978, when 300,115 trucks were built.

But the month's production was down 9.58 percent from August's 261,835.

Makers slated a build of 66,731 units last week, 0.08 percent below the previous week's 66,786 but 15.06 percent above the year-ago week's 57,999.

Year-to-date, 2,402,286 trucks have been assembled, 36.12 percent more than the 1,764,845 built last year at this time.

General Motors scheduled two overtime shifts Saturday (Oct. 6) at its Janesville (Wis.) and Lordstown (O.) plants.

Ford Motor Co.'s Lorain (O.) facility also worked Saturday.

Sales to crest in '84; Outlook sees downward trend for '85

By Michelle Krebs
Financial Editor

The new year will be ushered in on the sales crest of 1984, but the pace will slow dramatically by year's end, according to the latest Automotive News World Outlook.

The quarterly service of Data Resources, Inc., (DRI) and AUTOMOTIVE NEWS shows U.S. new-car sales in 1985 matching this year's 10.6 million level. However, the gangbuster level of sales in January will be drastically different from that at the end of 1985.

"While the year as a whole looks good, the year will start out at 11 million and fall to 10.2 million by year end," said John Hammond, DRI's North American economist.

"So while the 1985 annual number looks wonderful and looks like another good year, the pattern of sales will be down fairly significantly," he said.

That also means 1986 will be off to a slow start bringing U.S. sales to about 10.6 million for the year.

With sales volume tapering off next year, the battle will be for market share, and the squeeze will be put on the traditional domestic auto companies.

The World Outlook calls for voluntary import restraints on Japanese automobiles to be lifted or, at the very least, liberalized, and Japanese imports will increase from 1.85 million to about 2.1 million.

The European auto makers, whose sales were restricted in 1984 by the six-week German metalworkers' strike which cut production by 300,000 units, will not have that situation to contend with next year. They should enjoy further sales increases though not like those they have experienced in the past few years.

• DRI predicts a U.S. "growth recession" in 1985; that is, growth will continue but at more normal levels than the phenomenal advances of the past year. As a result, car demand will drop, Hammond said.

"All the things that made the consumer feel good will stop," said Hammond, who expects some segments of the economy to suffer a recession. "Consumers will become apprehensive of where things are going and will

Dream car at Paris

The Quasar by Peugeot

It doesn't look like other Peugeots, but the French firm displayed this Quasar dream car at the Paris Auto Show. It uses carbon Kevlar and carbon fiber body construction and has a twin-turbo version of the company's 16-valve, 350-HP competition engine. Peugeot said it has no plans to produce the Quasar. Stories, other Paris show pictures are on Pages 2, 45 and 46.

NADA elects Symes to succeed Jennings

WASHINGTON. — William J. Symes will become president of NADA following the dealer group's convention in San Francisco next January.

Symes is president of Symes Cadillac, Pasadena, Calif. As head of NADA, he will succeed James P. Jennings, a Chevrolet dealer in Glenview, Ill.

James B. Woulfe, president of Shamrock Ford-Chrysler-Plymouth, Dublin, Calif., was elected NADA first vice president to succeed Symes.

Jack T. Price was elected secretary of NADA for 1985, and Anthony Ursomarso was re-elected treasurer. Price heads University Volkswagen, Albuquerque, and Ursomarso is president of Union Park Pontiac, Wilmington, Del.

Symes has been a new-car dealer and NADA member since 1952. In addition to his duties as NADA first vice president, he is also chairman of the NADA Industry Relations Committee.

He has served as treasurer of the association and as a member of the Public Relations Membership and Finance committees.

Woulfe has been NADA director for Northern California since 1970 and is currently an NADA regional vice president. He is a past secretary of the association.

Price is serving his second term as NADA director for New Mexico. He is a past president and vice president of the

Assistant Managing Editor

Strikes against General Motors took their toll on U.S. car inventories last month, dragging the total down to the lowest level since November, 1983.

But the stockpile of new U.S.-built cars at factories and dealerships was better balanced at Ford Motor Co., Chrysler Corp. and Volkswagen of America.

That meant improved sales at Chrysler and Ford — so much that they offset the sales-rate loss at GM and turned around the industry sales rate which had been declining since May.

On Oct. 1, there were 1,266,201 U.S. cars in inventory, a decline from the Sept. 1 level of 1,277,484 and the sixth straight monthly decline. On Oct. 1, 1983, there were 1,195,755 cars in stock.

The latest figure is the equivalent of 54 selling days' worth of domestic cars, compared with 57 days a month earlier and 55 days a year earlier.

Honda's stockpile of Ohio-built Accords is worth more than a mention: It had only one day's worth. But that apparently didn't deter its sales force: The sales pace for that model picked up during the month.

As noted in the import-inventory article this week, Honda's import stockpile wasn't much better: Eight days. Combined, Honda had a seven-day supply of cars in dealer and port inventories.

• At GM, only Pontiac improved its inventory level and was able to maintain its sales rate. Once again, Buick, Cadillac and Oldsmobile sales were

breaking news

GM to anounce joint venture

LAS VEGAS.—A joint venture between General Motors and a European firm is expected to be announced by the auto maker today at the SEMA show here. Reportedly, the limited partnership will be involved in the performance market.

R&D cooperation approved

WASHINGTON. — U.S. automakers were ostensibly put on the same footing as their Japanese counterparts in the area of R&D last week as President Reagan signed legislation permitting competing companies to join in research and development projects without fear of violating antitrust laws. The measure makes it easier to form a joint venture, puts a limit on antitrust penalties resulting from such ventures and tires to keep frivolous antitrust suits from being filed by allowing a defendant to collect attorney's fees from the plaintiff if the suit is frivolous.

He'll develop, coordinate French firm's strategy in North America

Tippett has major role in AMC-Renault program

By Richard Johnson
Detroit Reporter

American Motors Chairman W. Paul Tippett said last week that it will be six months to a year before a new organization that will implement Renault's long-range plans for North America begins to take shape.

Meanwhile, Tippett, who was recently handed the task of developing and coordinating Renault's North American strategy, said he has entered the "collection mode" of his new job, studying the French auto maker's diverse operations on this continent.

Tippett is continuing as chairman of the AMC board and will serve as chairman of the Executive Committee of the board, replacing former AMC Chairman Roy D. Chapin Jr. in that post.

Jose Dedeurwaerder, a longtime Renault executive and AMC's president and chief operating officer since 1982, has been elevated to chief executive officer at AMC.

In the late 1970s, Renault acquired 46 percent of AMC. Five of the corporation's 14 board members are from Renault.

Tippett, AMC's chairman since January, 1982, said the time was right for him to step away from the day-to-day helm at the country's fourth largest car maker and devote a substantial chunk of his time to serving as "senior advisor" of North American operations for Renault.

"Renault has a major commitment in North America and they believe we could be useful in helping them develop the strategy," said Tippett. "They are, I think, pleased with the job we've been able to do at American Motors and thought maybe we could help them in other areas.

"Now that was a big enough job that I really couldn't do it part-time, one hour a day," he said. "We and the board felt it was important to go public with the fact that we are taking this job on, and at the same time relieving me of some of the day-to-day decisions.

• "We concluded it was best to make Jose chief executive officer, staying as president, so that he can make all the decisions," Tippett added.

"He's the top executive officer on decisions that don't have to be referred to the board. I'll still be chairman of the board so, obviously, I'll stay close to American Motors and have input into important decisions at board level. But Jose has done such an outstanding job it was time to kind of give him the

Yugo price worries Mich. Congressman

By John A. Russell
New York Staff Writer

NEW YORK. — The $3,990 price tag of Malcolm Bricklin's Yugo 55 raised the hackles of Rep. Dennis M. Hertel, Michigan Democrat, who last week requested the International Trade Commission (ITC) to launch an investigation "to prevent possible market disruption."

But Hertel's staff apparently did not do its homework as sources in the ITC said that they do not start investigations of any sort at the behest of a single congressman and under normal circumstances the product has to be landed and sold before dumping investigations are started.

Hertel's Detroit-area district has a concentrated population of people who work in the domestic auto industry. However, Brian O'Malley, the congressman's legislative assistant, denied that this was an election-year gambit on Hertel's part.

As for Bricklin, he termed the announcement "a great thing to happen to us (Yugo America, Inc)," and he said he may even use the congressman's quote of a "too-good-to-be-true" price in his advertising.

The tempest in a teapot started two weeks ago when a member of the congressman's staff saw an article about Bricklin in a national newspaper.

Christine Bricker, one of the congressman's aides, said the price of the Yugo 55 made the congressman suspicious, so he sent a letter requesting the investigation to the ITC.

According to a prepared statement, Hertel expressed disbelief in the price.

The statement said that auto maker Zavodi Crvena Zastava, the Yugo manufacturer, "is completely controlled by the Communist government of Yugoslavia and since the price of this auto appears to be lower than fair value, it indicates either massive subsidies or the use of slave labor."

O'Malley claimed the congressman meant "forced labor" while Bricker termed it a "purely rhetorical phrase."

Hertel claimed the manufacturer was government-controlled, which, according to the Yugoslav Chamber of Economy Trade Promotions, is untrue and companies in Yugoslavia are permitted to negotiate their own contracts (AUTOMOTIVE NEWS, Aug. 27).

Hertel's staff was also not aware that Yugoslavia has "most favored nation" trading status with the U. S.

O'Malley said Hertel wanted an investigation since the ITC has broad investigatory powers.

Sources at the ITC said that they do not have such powers. A spokesman in ITC Chairman Paula Stern's office said the agency would not launch a "lower than fair value" or dumping investigation unless it was petitioned by a company or the workers of the industry affected.

This is a formal legal proceeding which requires "standing" or vested interest in the case. Hertel does not have this.

The ITC does do a probe called "Section 332" investigation which analyzes impact on an industry. This is not binding and can be equated with a market study.

The ITC spokesman said "no single congressman" can re-

Import stocks trimmed; 24-day supply on hand

By Kathleen Hamilton
Assistant Managing Editor

The inventory of imported cars fell to 179,171 on Oct. 1, the lowest level since AUTOMOTIVE NEWS began tracking import inventories in mid-1981.

It was the third month-to-month decline. On Sept. 1, there were 184,513 new imported cars in stock at importers and dealerships. On Oct. 1, 1983, the total was 199,339.

The widespread shortages resulted in sales declines during September. Because days-supply figures are computed using sales rates, the days' supply of imported cars rose slightly for the month, to 24 from 23½ on Sept. 1.

Sales of German cars began returning to normal as supplies filled out after the German metalworkers' strike, but this time Jaguar's stocks were depleted by a strike, leaving it with only eight days' worth of cars.

Sales increases accounted for the lower days-supply figures for Audi, BMW and Volkswagen imports.

Among the other European makes, Renault's sales slump and continued shipments accounted for its high figure. Saab's inventory level returned to nearer normal after model changeover, but its September sales clearly were hurt by shortages.

And International Automobile Importers — importer of the Bertone and Pininfarina sports cars — reached an estimated two-year supply on the basis of slow sales.

Mitsubishi's 17-day supply of cars — compared with 63 days' worth a month earlier — was the result of a 50-percent sales-rate increase and no new shipments landing during the month.

The Oct. 1 shares by country of origin were Japan, 61.17 percent; Germany, 22.33 percent, and other European countries, 16.50 percent.

One month earlier, the shares were Japan, 61.38 percent; Ger-

SERVICE INDEX
110.3*

	Aug., '84 vs. Aug., '83	8 mos., '84 vs. 8 mos., '83
Gross Profit on All Labor and P&A Sales	+14.3%	+18.1%
Repair Orders Written	+ 5.3%	+ 8.0%
Total Labor Sales (Customer & Warranty)	+13.3%	+17.8%
Shop Parts Sales (Customer & Warranty)	+13.5%	+23.2%
Sales of All Parts and P&A	+ 8.5%	+18.2%

*—Survey by Automotive News shows that dealers' service and parts business in Aug., 1984, was 110.3 percent of business in Aug., 1983. Service business in the eight months of 1984 was 116.5 percent of business in the corresponding period in 1983.

Shop business climbs again

By Francis J. Gawronski
Service Editor

Service and parts business done by new-car dealers recorded another solid advance in August, although the growth rate was not as robust as the increase achieved in July.

According to the Automotive News Service Index, August's service and parts volume amounted to 110.3 percent of the business done by dealers in the same month of 1983. The July increase in shop volume over the year-earlier month was 15.1 percent.

Although the growth rate dipped in August, the increase was the 18th consecutive in which parts and service volume in dealership shops has topped the comparable year-earlier month.

August also was the 16th straight month that all five indicators used in the Service Index showed gains.

Gross profit on all labor, parts and accessory sales — the most important indicator from the dealer's viewpoint — recorded the highest increase in August, 14.3 percent, over the profit for the same month a year ago.

Shop parts sales (those used in both customer-paid and warranty work) were up 13.5 percent in August, barely topping total labor sales (customer-paid and warranty) which were up 13.3 percent over the year-earlier month.

Sales of all parts and accessories were up 8.5 percent for August, while repair orders written climbed 5.3 percent above last year's total.

Figures used in the Service Index are averages compiled from reports on shop operations from a cross-section of the nation's dealerships.

All five indicators also registered healthy gains for the first eight months of 1984.

Shop parts sales topped all indicators with a gain of 23.2 percent, followed by sales of all parts and accessories, up 18.2 percent, and gross profit, up 18.1 percent.

Labor sales were up 17.8 percent for the January-August period, while repair orders written advanced 8.0 percent.

Chrysler UAW Council votes to reopen pact

By Marjorie Sorge
Labor Editor

The 250-member UAW Chrysler Council voted last week to seek a reopening of the Chrysler-UAW contract which is scheduled to expire Oct. 15, 1985.

UAW President Owen Bieber has informally mentioned a possible reopening to Chrysler Chairman Lee Iacocca and has indicated publicly that the union intends to try to reopen the Chrysler contract once negotiations are concluded with Ford and General Motors.

"He didn't fall off the chair, he didn't jump out the window, he didn't say yes and he didn't say no," Bieber said when questioned about Iacocca's reaction.

Iacocca has said the union and the company already have a contract and he expects it to be honored until its scheduled expiration date.

The union, however, has noted Chrysler resurgence. The company, which lost $3.27 billion from 1979 to 1981, earned a record $1.51 billion in the first half of 1984. During the 1979 to 1981 period, the UAW-represented workers made concessions worth more than $1 billion to help the company avoid bankruptcy.

The UAW wants to reopen the Chrysler pact early not only because of Chrysler's improved financial condition but also because the UAW wants to get Chrysler back on schedule with Ford and GM, with all contracts expiring at the same time.

Chrysler currently enjoys a labor cost advantage over Ford and GM of a little less than $1 an hour.

Getting Chrysler back on the pattern would probably mean the union would want the Chrysler workers to be paid the same as Ford and GM workers.

Tighter standards due for survivors

Study sees supplier ranks thinning

By Geoff Sundstrom
Washington Reporter

WASHINGTON. — By 1990, original equipment manufacturers will use 20 to 30 percent fewer suppliers and will impose even more stringent quality and performance standards on those they retain, according to a wide-ranging supplier-industry forecast released by Arthur D. Little, Inc.

The study, The New U.S. Automotive Industry — Opportunities for Suppliers, said OEMs will come to rely increasingly on suppliers' research, design and engineering expertise from the time the vehicle is conceptualized, right on through actual production. For this reason, the study said, suppliers must understand all aspects of the vehicle systems as they relate to their specific components and must make investments necessary to upgrade facilities, quality control, data processing and in-house design capability.

The study predicted steady cyclical growth through the end of the decade in North American passenger-car sales. This growth is estimated at 2 percent per year from 1983 to 1990, with 12 million units expected to be sold in 1990.

Cyclical variations of plus or minus 1.3 million units around the trend line are expected to occur every four or five years, the study said.

• Projections of auto industry sales into the next century call for a slower overall growth of about 1.3 percent per year as the number of cars per 1,000 population nears the saturation point in the U.S. This number is less than half the 3-percent growth rate experienced in the last 10 years, A.D. Little said.

"The North American fleet will thus increase from 132 million units in 1980 to 150 million in 1990 and 170 million in the year 2000," according to the study.

"The proportion of small- and medium-sized cars in the fleet will increase at the expense of the large-car segment over the next 10-15 years," the study said.

Growth in the aftermarket will remain about constant with revenues projected at roughly $20 billion per year at the supplier level, the study said. The real change will be in the distribution of this market, as OEM suppliers gain market share due to the increased use of high technology and as owners rely more on auto dealers for repairs.

The study estimated that by 1990 the OEM aftermarket share will increase from 21 percent to 34 percent, although 25 percent

GMC dealers welcomed to Philly

Philadelphia Mayor W. Wilson Goode, seated center, welcomes two new GMC light-truck dealers to Philadelphia, James V. Cataldi, left, president, Jim Cataldi Buick-GMC Truck, Inc., and Daniel H. Polett, right, president, Wilkie Buick-GMC Truck-Subaru Co. GMC officials taking part are, from left, C. N. Contor, Washington zone heavy-truck manager; Donald B. Buechler, Washington zone manager; Larry T. Bowles, Eastern Region sales manager, and Duncan A. Brodie, truck sales director, GMC Truck & Coach Operation.

Dealers report gains in truck-park sales

Truck-parts sales volume has increased this year over a year ago, according to almost all truck dealers responding to an AUTOMOTIVE NEWS survey.

Among heavy-truck dealers, 79 percent said business was up, 11 percent said business was down and 10 percent said business was the same as last year.

Three-fourths of the light-truck dealers reported business was up, while the remainder of dealers said volume was about the same as last year.

The largest gain in parts sales, 62 percent through June, was reported by an Eastern International dealer who said: "Construction work has dump trucks and associated trucks busy on two shifts. Some operate seven days a week."

This dealer anticipated strong parts sales for the next year.

More than 40 percent of the heavy-truck dealers said increased business was related in some way to improved economic conditions, but only 12.5 percent of light-truck dealers linked the economy to increased parts sales.

Two dealers said increases in parts sales were due to an upturn in service business.

A Northwest International dealer said "owners are repairing their vehicles at a faster pace."

A Midwest Ford dealer said he picked up a fleet account, and a Southwest Ford outlet reported that it took another truck line which has increased its parts sales.

A Midwest International dealer, whose parts business volume was about the same as last year, said "the parts market is very competitive. Price cutting is rampant. I believe many dealers do not know costs or their help doesn't."

Seventy percent of all truck dealers said the most effective method of maintaining contact with outside customers is to have salesmen call on them.

An International dealer in the Midwest said "outside salesmen are the most expensive way (to keep in contact with customers), but is the only way to maintain market share."

A Northeast Mack dealer said: "Our parts personnel call on customers directly. These are the same customers we see almost daily, but our people get out on the road for contact and goodwill."

• An International dealer in the Midwest, whose business is up 30 percent this year, called phone calls the best contact and

GAC plans to buy facility in Ohio from Rockwell

ANN ARBOR, Mich. — General Automotive Corp. announced that it has reached agreement with Rockwell International covering the purchase of Rockwell's facility in Marysville, O.

A spokesman for GAC said the transaction, which is subject to several contingencies, is expected to be completed early in 1985.

GAC, international manufacturer of specialty vehicles, purchased the Flxible bus operations in Delaware and Loudonville, O., from Grumman Corp. in 1983.

Although plans for the Marysville facility were not released, GAC said the transaction was unrelated to the Flxible business and was not expected to have a significant direct effect on those operations.

Caterpillar extends 3208 Economy ratings

PEORIA, Ill. — Caterpillar Tractor Co. has introduced four new 2,200-RPM Economy ratings in its 3208 diesel truck engine. The new 3208s include 165 and 215-HP 49-state ratings, and 175 and 200-HP California ratings.

Caterpillar said the engines have "virtually unlimited application for private and for-hire delivery users." The company also said tests showed that its 215-HP engine achieved from 6.8 to 13 percent better fuel economy than competitive diesels.

truck industry news

Sales second-highest ever; Ford is No. 1

'84 models close to record

Retail sales of new trucks of all types in the U.S. were the second highest ever in the 1984 model year, with significant increases in all three major market segments.

Franchised dealers and factory outlets retailed 3,919,594 units in the period starting Oct. 1, 1983, and ending Sept. 30, 1984, according to preliminary factory reports.

The 1984 model total was 35 percent higher than the 2,903,867 trucks retailed in the 1983 model year and 2.7 percent below the alltime high of 4,028,294 established in the 1978 model year.

Ford dealers sold 1,150,474 new trucks in the 1984 model year, more than 42,000 units ahead of second-place Chevrolet. The total was 28 percent higher than the 898,648 Ford sales in the 1983 model year.

The model year ended on a record note with sales of 310,147 units in September, an increase of 11.7 percent over the year-earlier 277,600. In the first nine months of 1984, retailers sold 3,074,522 vehicles, up 34.6 percent from last year's 2,284,404 units.

Sales of light trucks in the 1984 model year were 34.3 percent higher than the previous year, rising from 2,727,452 units to 3,664,148. The Chrysler minivans and the downsized Jeep Cherokee and Wagoneer sparked the gains in light-truck deliveries.

• Heavy trucks made a big comeback in the 1984 model year with the strong upturn in the general economy.

Dealers and factory outlets retailed 200,507 Class 7 and 8 vehicles in the 12-month period, an increase of 54.6 percent over the year-earlier 129,698 units. Model-year sales of the mediums were up 17.6 percent, from 46,717 units a year ago to 54,939.

Light-truck sales in the first nine months of 1984 were up 33.7 percent to 2,869,897 units, compared with 2,146,502 the previous year.

Sales of the heavies soared 59 percent, from 100,880 a year ago to 160,357. Mediums retailed through September totaled 44,268 units, an increase of 19.6 percent over the previous year's 37,022.

During the 1984 model year, dealers retailed a record 1,573,897 compact trucks, an increase of 53.5 percent over the previous high of 1,025,404 units established in the 1983 model year.

In the first nine months of 1984, sales of the compacts totaled 1,286,260 units, an increase of 57.4 percent over last year's 817,024.

Through September, the domestic compacts accounted for

Continued on Page 60, Col. 3

Big increase is seen for trucks in Class 7

The need for single-axle tractors to move trailers in the city and twin trailers on the highway, as well as demand for larger straight trucks for city delivery, will boost Group 7 truck sales some 54 percent in the last half of the decade, according to Martin B. Labbe, director of the Transportation and Logistics Service at Data Resources, Inc.

Increased competition, as a result of deregulation, will force truck users to buy the more flexible Group 7 vehicles, Labbe told a recent DRI vehicle-outlook seminar in Detroit.

Labbe predicted average annual sales of Group 6 through 8 vehicles, including buses, will climb from 223,300 per year at this time to 329,700 by the end of the decade.

Sales of Group 4 and 5 trucks also will increase now that the excise tax has been lifted, he predicted.

As a result of deregulation, Labbe said he anticipates that large truck fleets, those with over 200 trucks, will get larger. Mid-size fleets, he said, would get "squeezed," and fleets with less than 20 vehicles will remain stable as "niche players."

• Owner/operators, he added, will thrive, but they will work under long-term contracts to carriers and shippers.

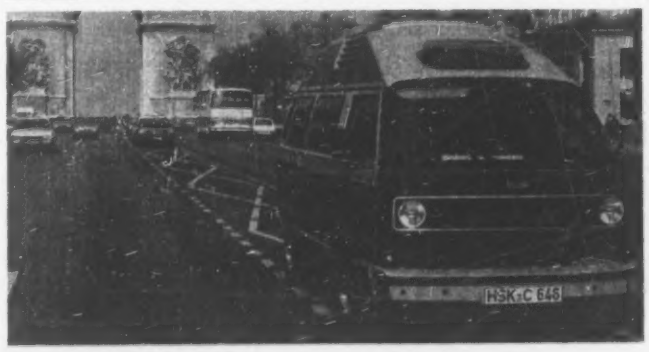
Labbe also predicted:

Private carriers will replace their single-axle tractors with dual axles to increase flexibility for backhauls.

Truck aerodynamics and fuel economy will continue to be important, but those truck operators with high-powered rigs, 350 HP and above, will continue to buy high power.

Antiskid-brake regulation will return because of the success of newer systems now in use in Europe.

Piggyback transportation by rail will make gains on truck transportation, but truck transportation will make even greater gains on boxcar transportation in the short term.



German land yacht

Volkswagenwerk and Dehler Yachtbau, the German boat builder, have combined to produce this high-roofed pleasure or business vehicle called the Profi. A drag coefficient of 0.39 is claimed. That low number is the result of modern manufacturing methods, optimum utilization of space, slick finish and highly efficient aerodynamic shape, Dehler says. Several rooflines and interior setups are being sold in Germany. At least one U.S. converter is eyeing the vehicle, VW says.

Peterbilt offers Cummins L10-300 in some models

NEWARK, Calif. — The new 300-HP Cummins L10-300 and Formula L10-300 diesels are now offered in a number of Peterbilt models.

Peterbilt Motors Co., which said it is the first manufacturer to offer the new engines, noted that they cost and weigh less, and are more fuel-efficient than any 300-HP engine on the market.

The diesels are available in Models 353, 359 and 362, and will be offered in Model 349—both construction and highway series—"soon after October," a Peterbilt spokesman said.

He said the L10-300 Series is the first of the L10 family to feature Cummins' "optimized aftercooling system," providing improved fuel economy and increased power and torque for better driveability.

"In this system, also known as low-flow cooling, the temperature of the coolant leaving the radiator is dramatically lower than in traditional systems," he said.

"The coolant is piped directly to the turbocharger aftercooler, which provides significantly lower intake-air temperature and results in superior combustion efficiency and engine performance," he added.

With a dry weight of 1,930 pounds, the L10-300 is as much as 700 pounds lighter than other engines in the 300-HP range, the spokesman noted.

The L10-300 is rated at 300 HP at 2,100 RPM with a peak torque of 950 foot pounds at 1,300 RPM, for a 27 percent torque rise. The Formula model develops 300 HP at 1,900 RPM with a peak torque of 950 foot pounds, for a 15 percent torque rise.

Togliatti plant accounts for half of Russia's car production

By Richard Feast
European Editor

For more than two centuries there was a township at Stavropol, 650 miles southeast of Moscow on the Volga River. Its 15,000 inhabitants lived a rural life as farmers and fishermen.

Their world changed in 1950, when construction began on a huge hydroelectric power station on the Volga. Stavropol disappeared under the lake created by the dam, as cheap electricity from the Lenin power station attracted chemical, cement, machinery and electrical equipment industries to the area.

When the power station was completed, there was manpower and construction equipment on the spot. On July 20, 1966, the Soviet Union decided it needed to build another passenger car plant. Forty regions angled for the project. That same year, in another world, Italy's Fiat 124 was voted European Car of the Year.

Fiat collaborated with the Soviets to build a car plant where Stavropol had been. Fiat planned the factory and provided the basic designs for the sedan it was to produce. The factory, widely known as Togliatti after the Italian Communist Party's most famous leader, is officially the Volga Automobile Associated Works, or VAZ for short.

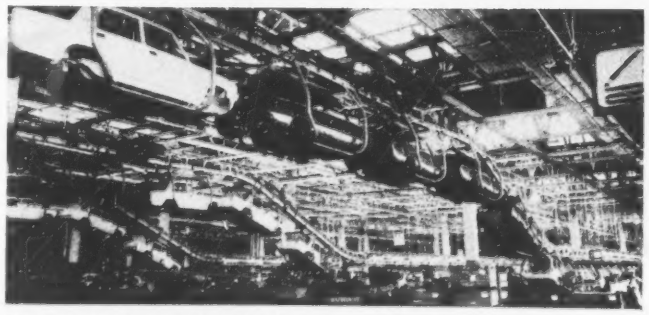
The first production car emerged on April 19, 1970. Within 3½ years it was working at capacity — 660,000 annually, 2,200 daily or one every 22 seconds. It has continued to do so ever since. The investments are said to be approximately $1.2 billion.

Togliatti's products are adaptations of that Fiat 124 design. They are known in the east as the Zhiguli, after a range of hills by the Volga, and in the west as the Lada, an old form of sailing boat which traded on the Volga.

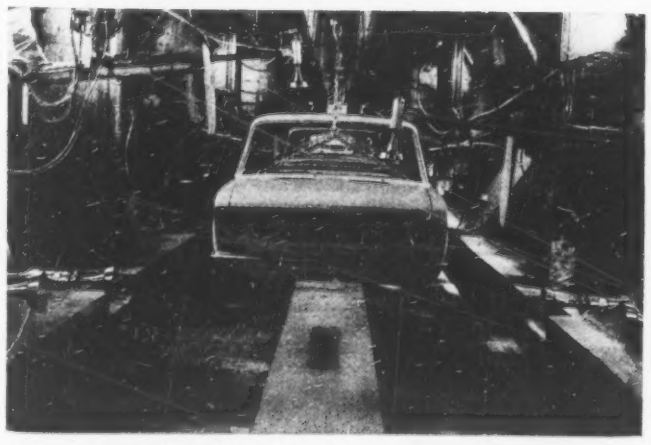
Since 1978 VAZ has produced — on a separate line — the Soviet-designed Niva 4x4. Next year the factory's planned output is 717,000, including 75,000 Nivas. This amounts to one in every two passenger cars made in the Soviet Union.

These huge volumes, combined with the depth of production, make some impressive statistics. VAZ employs some 150,000 people, 80,000 of whom are direct production staff. It covers 6.15 million square yards, 2.75 million of which are covered shops. Each of its three final assembly lines is over one mile long.

It has five main production shops: For sheet metal presswork; iron and aluminum foundries; mechanical component section; body assembly; and die and toolrooms. In addition, satellite plants have sprung up within a few miles. These supply components, as well as factory maintenance, service and catering. The task of providing meals for a single shift -- 40,000 people — in a 15-minute timespan creates its own special problems.



Making Ladas at Togliatti.



VAZ body painting line with robots.

Almost half the labor force—48 percent—are female, with the greatest concentration in final assembly. The average age in the area is only 29. As in the rest of the Soviet Union, children begin nursery school at 1½ years, freeing both parents for work.

The kindergartens, like the hotels, sports halls, health care centers, theaters, clubs and colleges, are part of the integrated VAZ works. There is no private enterprise. The factory supports the requirements of the employes. That is why the proportion of direct labor employed in the factory is only just over half the total payroll.

The average monthly wage is the equivalent of about $245. Between five and 10 percent is for living accommodations. This low rental is for space which is meagre by western standards but includes services like heating, lighting and for a nominal fee, telephone. Retirement for men is 65, for women 55. Retirement payments are about 60

Continued on Page 37

Lotsa Ladas

Below are the main markets in Western Europe where Ladas are sold. The figures include the Niva 4x4 and a handful of other Soviet products. While the overall average is about 1 percent for market share, the 24,000 sales in France means a market share of 1.2 percent, while almost 10,000 in Finland amounts to a slice of 8.2 percent. Statistics are from national associations, Lada Cars (GB) and Automotive Industry Data, Lichfield, England. □

Where Ladas are sold in Western Europe

Country	1980	1981	1982	1983	6 mos., 1984
Austria	2,555	2,596	2,059	1,639	863

world news briefs

Ford Escort: Turbocharged for international motor sports.

An Escort with urge

Ford is to build 5,000 turbocharged versions of its European Escort in order to qualify for the Group A category in international motor sports. The Escort RS Turbo has 132-HP, a quarter more than the XR3i on which it is based. The turbo is a Garrett AiResearch T3, and the result is a 125-MPH flyer. Use of a limited slip differential as standard is claimed to be a world first for a front-drive production car.

Opel improves

Net earnings at Adam Opel last year rose more than threefold to DM 299 million ($98 million). Sales revenues rose by 15.5 percent to DM 14.7 billion ($4.8 billion). At 955,000 units, production was down slightly, though overall in Europe, Opel (and Vauxhall) sales reached a record 11.1 percent. Setbacks in the first half of this year (metal workers' strike) should be overcome by 1985, believes chairman Ferdinand P. Beickler.

Double-deckers for U. S.

British - style double - decker buses may be assembled by Gillig Corp., Hayward, Calif., following discussions with BL's Leyland division. Leyland believes there is the potential for up to 10 percent of the 50,000 single-deck city bus market to be replaced by double-decker vehicles. The model selected by Gillig is the Olympian, now built at Workington in northern England.

AC into action

British sports car maker AC recently changed hands and, now located in Scotland, is to supply 200 vehicles a year for the next 10 years to a newly formed U. S. distribution company. It put a value of more than $31 million on the deal. Over the longer term, managing director David MacDonald talks of replacing the current ME3000 model with a new vehicle aimed specifically at the U. S. market.

Swedes favor Brazilians

Thirty percent of Ford's Swedish registrations in the first eight months of this year originated in Brazil. The recent South American sourcing for Escorts allowed Ford to move just ahead of VW-Audi as the leading importer in Sweden.

Engine changes

The Ford Sierra is to get a 1.8-liter engine option, mid-way between the 1.6 and 2-liter. Austin Rover's MG Maestro hatchback is to have the 2-liter fuel injection engine already seen on the Montego sedan.

BCA buys again

The British Car Auction group's expansion into the U. S continues. It has acquired, through its American subsidiary, Baltimore-Washington Auto Exchange Inc. and Brookdale Associates. It is BCA's 11th U. S. business.

GM marketing men change

Herman Vermeebergen has been appointed Opel marketing director in Belgium and Luxembourg. He succeeds E. van Loo, who has taken up a similar appointment at GM-Spain. Before his Belgium appointment, Vermeebergen was based in Athens, where he looked after American exports in Europe and the Middle East.

Change brewing at Lotus

A further change in the distribution of shares in Group Lotus is being discussed. Hazel Chapman, widow of the founder, may sell her shares, amounting to about 20 percent. Most likely purchasers would be David Wickins' BCA, which already has 25 percent, and/or Michael Ashcroft's Hawley Group, which has a minority stake in Lotus already.

Good July in Germany

Vehicle production in West Germany in July was 271,900, an increase of 20 percent over the same month one year earlier. The explanation lies in the fact that after the seven-week metal workers' strike in May and June, work continued during the vacation period in some plants on a voluntary basis. On a cumulative basis, the seven-month production total (2,172,-500) was 10 percent lower than one year earlier.

Confirmed

Perkins Engines has confirmed that the projected collaboration with Land Rover to produce a diesel V-8 for the Range Rover has been abandoned. But Land Rover is still looking for a suitable diesel power unit to broaden Range Rover's appeal.

Cosworth expands

Cosworth, the British engineering company which developed the 16-valve cylinder head for the new, sporty Mercedes-Benz 190, has opened a factory to specialize in precision casting of aluminum components. It will supply Daimler-Benz with up to 7,000 heads a year. Other auto companies — including some in the U. S. — are also in deep discussion with Cosworth.

Roadrunner arrives

Leyland Vehicles' Roadrunner truck, aimed at the 6.2 to 10 tonnes range, has been launched. Managing director Les Wharton acknowledges it will be a make-or-break truck for Leyland, a heavy loss-maker since the slump in demand for commercial vehicles. □

The old and the new

Compared with the old Renault 5 in the rear, the new R5 in the foreground is a little longer and wider but not as tall. Renault plans to build 525,000 annually at plants in Belgium, Spain and Portugal.

Can Superfive regain European crown for its maker?

Renault banks heavily on new R5

Continued from Page 22

lion ($420 million) investment has been spent.

The car will also be built at the Brussels, Belgium, factory, and at the Renault plants in Spain and Portugal. Lower range models will be assembled at Billancourt, the island factory in the Seine where Renault was founded.

Over the longer term Renault would like to wind down manufacturing at Billancourt, replacing it with an environmentally more acceptable engineering and training center.

By early next year Renault will be building R5 at the rate of 2,000 a day, though 2,500 a day is a more likely forecast in view of the sales ambitions for the car.

The aim is to return to the 5 percent-plus of the European new-car market that the R5 enjoyed during 1980-81. At current rates that means annual sales of 525,000. Renault believes it was still leader in the category last year, even though its share was down to 3.6 percent. It estimated its nearest rivals were the Ford Fiesta at 3.25 percent, Fiat Uno with 3.04 percent and the Opel Corsa/Vauxhall Nova and Austin Rover Metro with about 1.7 percent each.

The supermini category itself has been steadily growing, from 17.6 percent of total in 1978 to approximately 22 percent — 2.2 million cars — last year.

Renault has reduced the number of production hours required to build the car. It lists 20 hours today — a time that will decrease, it promises — compared with 24 hours for the old R5.

The new car is a little longer and wider, but not quite as tall as the old model. Wheelbase is 62.4 inches, and length 141.4 inches. There is substantially more interior space, with front shoulder space increased by 2.7 inches to 53.6 inches, for example. Fuel tank and trunk space are increased, too.

Weight-savings were made all around. The most basic version weighs some 1,532 pounds compared with 1,587 pounds for the equivalent old model. The body in white is 26 pounds lighter at 486 pounds.

Together with a lower drag-coefficient, this adds up to useful fuel consumption gains on what was one of the most economical models on the market According to Renault calculations, on the 550 mile drive from Brussels to Lausanne, the most economical R5 would average the equivalent of 51.1-MPG (U. S.). Using the same test on its rivals' most economical models, Renault came up with 49.0-MPG for the Peugeot 205, 48.9-MPG for the Fiat Uno, 47.1-MPG for the Metro, 45.9-MPG for the Ford Fiesta, 43.0-MPG for the Opel Corsa and 39.6-MPG for the VW Polo.

While power units are carry-overs from the old model, they are now mounted transversely. This requires the use of the R9/11-type gearbox. Torsion bar front suspension has been replaced by MacPherson struts. Torsion bars are retained at the rear, but occupy less space. Anti-sway bars are used at both front and rear, though Renault has retained the soft, long travel suspension of the old one. On the road, the new car has far less pronounced body roll. It is more European than French.

Initially, four equipment levels, three types of gearbox and five different engines combine to produce a 10-model range. Power units range from a 42-HP gasoline to a 72-HP gasoline. Plans are in hand to produce a limited number (5,000) of special Turbo Coupe models, powered by a 115-HP engine from the R9.

Sales to taper off through 1985

Continued from Page 1

start to save instead of spend in case they are laid off."

In addition, there is less pressure from pent-up demand than has been the case since 1983, despite the aging of the U.S. car fleet, which now averages 7.5 years. The aging fleet will not be enough to bypass a slowdown, Hammond said.

"The problem of the aging fleet provides a foundation for increased car sales but in and of itself doesn't create a surge one year and a recession the next year," he said.

"It prevents a recession from being severe and makes a boom year a record year," he added. "All it really does is push in the direction already established. Since the trend will be downward, it won't let car sales fall through the floor, but it isn't strong enough to stave off a temporary downturn."

Yet, that downturn won't be anything like the last recession and actually may be good for the economy, Hammond noted.

The economy needs a breather from its break-neck pace to put it back into balance, he said. "Otherwise the economy would suffer exaggerated downturns. If it doesn't slow down in 1985, we'll pay serious consequences later," Hammond warned.

• For the longer term, the traditional U.S. domestic companies have serious problems with which to contend. Though 1990 is expected to be a record 11.8-million-unit year, the traditional domestic companies may not benefit.

The Japanese will gradually increase imports to the U.S., though they will be cautious, as will the Europeans, because of threats of trade restraints or local content legislation, Hammond said.

Japanese and European imports will gobble up to 40 percent of that record 1990 U.S. market, according to DRI, meaning the traditional domestics will have only a 7-million-unit year, compared with this year's 8.2 million.

That's an important fact for suppliers and dealers, especially smaller ones, to realize, Hammond cautioned, and they must change the way they do business.

"They must try to penetrate new production from the Japanese and get a piece of the growing Mexican market," he said. "They can't sit back and rely on the fact that car sales will be increasing—or they'll be eaten up."

European auto makers, at the same time, will continue to enjoy some growth because their fundamental market—the 35-to-40-year-old buyer—will become more and more affluent.

However, at home, the European auto makers will be faced with challenges of their own.

The World Outlook has been downgrading European demand throughout the past year. Demand for 1984 now stands at 10.35 million units compared with the 10.43 million predicted last May and the 10.44 million forecasted a year ago.

European growth throughout the decade will be modest, peaking at 11.5 million in 1990, according to the forecast.

• While U.S. auto makers have earned huge profits through increased volume and cost controls, the European auto makers as a group will report losses for the fifth consecutive year, John Lawson, DRI's London-based economist, noted.

In the coming years, the Europeans will have to take drastic cost control measures as Detroit's auto companies have in the past few years. At the same time, they must find ways to finance huge capital spending programs for new products, Lawson said.

Lawson expects some cost-control measures to take the form of cooperative ventures, either between European companies or between European and Japanese companies. The European companies also may follow the pattern of U.S. car makers and increase outsourcing.

In addition, there is pressure on the European auto makers for price harmonization, the effect of which for the short term will be to reduce car prices but will cause further erosion of the manufacturers' revenue base, Lawson said.

Also, European nations are contemplating emission control standards. Germany already has passed a law requiring new vehicles to use lead-free fuel by 1989. Other nations probably will follow suit. That translates into more capital spending for those already-strapped companies.

The strong U.S. dollar, which has created a money machine for European car makers exporting to the U.S., is bound to weaken sometime during the decade, Lawson said, further complicating the plight of the European car companies.

STATEMENT REQUIRED BY THE ACT OF AUGUST 24, 1912, AS AMENDED BY THE ACTS OF MARCH 3, 1933, JULY 2, 1946 AND JUNE 11, 1960 (74 STAT. 208) SHOWING THE OWNERSHIP, MANAGEMENT AND CIRCULATION OF

Automotive News, published weekly at Detroit, Michigan, for October 15, 1984.

1. The names and addresses of the publisher, editor and managing editor, are:

Publisher: Keith E. Crain, 1400 Woodbridge, Detroit, Michigan 48207.

Editor: Robert M. Lienert, 1400 Woodbridge, Detroit, Michigan 48207.

Managing Editor: John K. Teahen Jr., 1400 Woodbridge, Detroit, Michigan 48207.

2. The owner is: (If owned by a corporation, its name and address must be stated and also immediately thereunder the names and addresses of stockholders owning or holding 1 percent or more of total amount of stock. If not owned by a corporation, the names and addresses of the individual owners must be given. If owned by a partnership or other unincorporated firm, its name and address, as well as that of each individual member, must be given.)

Crain Communications Inc., 740 Rush St., Chicago, Ill. 60611.

3. The known bondholders, mortgagees, and other security holders owning or holding 1 percent or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.)

None.

4. Paragraphs 2 and 3 include, in cases where the stockholders or security holder appears upon the books of the company as trustee or in any other fiduciary relations, the name of the person or corporation for whom such trustee is acting; also the statements in the two paragraphs show the affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner.

5. The average number of copies of each issue of this publication sold or distributed through the mails or otherwise during the 12 months preceding the date shown above was: Total copies printed—65,964; sales through dealers and carriers, street vendors and counter sales—235; mailed to subscribers—60,775; total paid circulation—60,990; free distribution—2,555; total copies distributed by mail—63,545; office use, left over, unaccounted, spoiled after printing—2,165. Actual number of copies of single issue published nearest to filing date, (September 24, 1984)—Total copies printed—63,900; sales through dealer and carriers, street vendors and counter sales—247; mailed to subscribers—61,426; free distribution—852; total copies distributed to readers by mail—62,525; office use, left-over, unaccounted, spoiled after printing—1,119.

(This information is required by the act of June 11, 1960 to be included in all statements regardless of frequency of issue.)

I certify that the statements made by me above are correct and complete.

JACK H. LOWRY, business manager.

1,000 Volvos sold

Greg Peterson, of Park Ten Volvo, San Antonio, has become a member of the Volvo Hall of Fame, an honor gained by selling 1,000 new Volvos.

Second-highest model year total on record

Truck sales climb past 3.9 million

Continued from Page 16

64.9 percent of the industry's total, compared with 55.9 percent a year ago. This year, sales of the domestics totaled 834,999 units, up 82.9 percent from last year's 456,483.

New-truck sales by Big Three dealers in September totaled 241,191 units, up 7.2 percent from last year's 225,000. The nine-month count was 28.7 percent higher than a year ago, 2,362,595 versus 1,836,212.

No. 1 Ford reported that its dealers retailed 94,583 vehicles during the month, a gain of 9.9 percent over the year-earlier 86,035. Through September, the total was 875,862, up 2.1 percent from last year's 717,346 units.

In September, Chevrolet dealers sold 78,856 new trucks, down 20.5 percent from the year-ago 99,206. The nine-month total of 847,527 units was 17.1 percent higher than last year's 727,774.

Dodge and Chrysler-Plymouth dealers retailed 41,135 vehicles during the month, an increase of 98.7 percent over the year-ago 20,700. The January-September count was 392,803, up 97.1 percent from 199,304 in 1983.

GMC dealers retailed a record 26,617 units during the month, a gain of 39.7 percent from last year's 19,059 and 11.9 percent higher than the previous mark of 23,779 set in September, 1976.

The nine-month total was up 25.9 percent to 246,403 units, compared with 195,788 in the like period a year ago.

• September sales of Jeep four-wheel-drive vehicles totaled 11,624, an increase of 89.8 percent over the year-earlier 6,123 units. Through September, the total was 110,363, up 107.8 percent from last year's 53,107 units.

Only eight of the discounted Volkswagen front-drive compact pickups were retailed in September, compared with 324 a year ago. The nine-month count was 387, down sharply from last year's 4,310 units.

Toyota dealers retailed a record 14,165 compact trucks during the month, an increase of 15.3 percent over the year-earlier 12,286, the previous high. Through September, the total was 195,693, up 48.8 percent over last year's 131,507 units.

During the month, Nissan-Datsun dealers sold 13,010 small pickups, a decline of 19.2 percent from last year's 16,106 vehicles. The September count included 5,240 units assembled in Nissan's plant in Tennessee.

Sales through September, however, were up 42.6 percent to 153,924 vehicles, compared with 107,941 in the like period a year ago. The nine-month count included 70,229 pickups built in the U.S.

Mazda sales in September were 100.5 percent higher than a year ago, 10,425 versus 5,200. The January-September total of 91,061 sales was 74.4 percent higher than last year's 52,224.

Isuzu dealers retailed 4,321 compact vehicles during the month, a gain of 82.6 percent from the year-ago 2,366. The nine-month count was up 77.5 percent, from 17,874 units in 1983 to 31,718.

September sales of small Mitsubishi trucks totaled 1,513 units, an increase of 74.1 percent over last year's 869. Through September, the count was 11,531, up 87.1 percent from the year-earlier 6,163 units.

As he steps away from day-to-day helm

Tippett eyes AMC-Renault shuffle

Continued from Page 1

full package of responsibilities."

However, Tippett said, there will be a few areas which will continue to flow directly to him as chairman — principally governmental affairs.

"I'll be speaking out on some issues that affect the company and the automotive industry," he said. "You know me well enough to know that I have some points of view and I would expect to express them both as my personal point of view and the company's point of view when it is appropriate."

Tippett said Dedeurwaerder's background in manufacturing and product planning is one of "two or three" reasons why he is the right person to assume CEO responsibilities at AMC.

With introduction last year of the downsized Jeep Cherokee and Wagoneer models, and plans set for a compact Jeep Comanche pickup next year, Tippett said the company is moving into its passenger-car phase.

"The major thrust of our plans is with passenger cars, cooperating with Renault," he said. "He (Dedeurwaerder) is the ideal person to honcho that because he knows both American Motors now and Renault. So as we move into the passenger-car phase, I think it's perfect for him to be where he is. He'll take a lot of liaison with Renault in Europe."

Renault recently confirmed that it will sell the upcoming rear engine, two-passenger replacement for the Alpine 310 sports car in the U.S. In addition, Renault's Espace minivan is slated for the U.S. in 1986 and a final decision on whether to bring over the R-25 sedan is scheduled to be made shortly.

• A major restyling of Alliance —the so-called X-52 project— is reportedly underway for the 1987 model year, with most of the redesign work being handled by Renault. A Renault-designed midsize car to be assembled at AMC's planned new assembly plant in Brampton, Ont., for the 1988 model year is currently under joint development.

There have also been reports that replacements for Fuego and the R18 sedan and wagon may be coming from Europe for the 1987 model year.

Tippett said the company is still reviewing a decision on the R-25, but declined comment on other long-term product plans.

Tippett said he is proud of AMC's recent turnaround, and said the success of the Alliance and the downsized Jeeps made possible the realignment of responsibilities.

"If you take the first six months of 1984 and compare them with the first six months of '83 for continuing operations, we've improved profits in one year by $175 million," he said. "I don't think that's too shabby. If we hadn't done a reasonably good job, I don't think our friends would be asking us to see if we can't do some other things."

Tippett said his first duty as senior advisor of North American operations for Renault is to "make sure I know everything that is happening." His responsibilities will encompass both auto and non-auto operations in the U.S., Canada and Mexico.

"Renault has lots of things going on in North America besides American Motors," he said. "They're in the robotics business, the heavy truck business, the laser joint venture business. They have a big engine plant in Mexico, and they are negotiating some agreements with International Harvester, mostly relating to Europe at this point.

• "For example, Renault supplies engines to Winnebago for motor homes," Tippett said. "I've got to know what the current state of affairs is before we can jump on to what we do next. It can't be a full-time job because I've still got to be chairman, I'm not leaving American Motors."

Tippett said that under the new format, Renault's CEO in Mexico will continue to report to corporate officials in France. But, he said, formulating an "optimal organization" will be among his tasks.

He said he will review the complexity of interchange of supplies and sales with an eye toward reorganization. As an example, he noted that AMC is currently making Alliance parts and stampings in Kenosha for Renault de Mexico. Meanwhile, he said, there is considerable parts shipment from Mexico to France, and some of those parts come back from France to the U.S.

"All that must be looked at to see what is the best way to organize it, what is the best way to develop strategy," he said. "That's what we are going to be doing here in the near term."

Tippett said he doesn't yet know what form his North American Renault organization will take, nor precisely when it will be operational. But he predicted that formation of the group will require 6-12 months.

"People ask if we are going to have a big organization... like NAAO at Ford," he said. "The answer is I don't know because I don't have the information yet."

The new duties will likely result in the AMC chairman spending a bit more time in Europe.

Import inventories trimmed; days' supply steady at 24

Continued from Page 3

many, 24.19 percent, and other countries, 14.43 percent.

Import-truck inventories for individual makes changed considerably during the month. The stock of trucks climbed from 75,352 on Sept. 1 to 78,770 on Oct. 1. One year earlier, the truck inventory had been 51,375.

Biggest change was at Toyota, where sales returned to a more normal rate after a blockbuster August and inventories nearly doubled. The result: 40-day supply — still below the 60 days considered ideal for imports, but certainly better than Toyota's 11-day truck supply on Sept. 1.

The combined car-truck import inventory on Oct. 1 was 257,941, down from 259,865 on Sept. 1, but up from 250,714 on Oct. 1, 1983.

The Oct. 1 import-vehicle stockpile was good for 27 selling days, compared with a 25-day supply on Sept. 1 and a 30½-day supply on Oct. 1, 1983.

• On Oct. 1, there was a 19-day supply of Japanese cars. The breakdown by line and days' supplies: Honda (imports only; there also was a one-day supply of domestic Accords), 8 days; Toyota, 12; Subaru, 14; Mazda and Mitsubishi, 17; Chevrolet's captive Sprint by Suzuki, 22; Nissan, 24; Isuzu, 52, and Chrysler's captive imports, 69.

Of the Chrysler captives, there was a 66-day supply of Plymouth Colts, 65 for Dodge Colt, 126 for Plymouth Conquest, 154 for Dodge Conquest, 63 for Plymouth Vista and 60 for Dodge Vista.

There was a 39-day supply of German cars, broken down this way: BMW, 6 days; Mercedes-Benz, 22; Porsche, 29; Volkswagen, 38, and Audi, 40.

The days' supply of other imports averaged 58; Jaguar, 8; Maserati, 40; Saab, 41; Volvo, 47; Peugeot, 49; Alfa Romeo, 59; Renault, 217, and International Automobile Importers, 638.

The 39 days' worth of import trucks (including the U.S.-built Nissans) broke out this way: Mazda, 14; Mitsubishi and Toyota, 40; Nissan, 44, and Chrysler and Isuzu, 55.

Supply of domestics falls to 54 days

Car inventories dip to year's low

Continued from Page 1

constrained the most by supply.

And because of the late model-year changeover for GM J-cars, Chevy's supply of its best-selling Cavalier fell to a mere 36 days as its sales rate picked up. A 45-day supply is generally considered ideal for domestic cars.

Ford Motor Co.'s sales rate picked up and its stockpile declined slightly during the month. Every model carrying the Ford name increased its sales pace, as did nearly every Mercury model. Sales of all Lincolns declined.

Most noteworthy of the Fords was LTD, whose Sept. 1 stockpile of 71 days was nearly halved to 42 days on Oct. 1 thanks to increased sales.

Chrysler fared best of the Big Three last month: Its inventory climbed and its sales rate climbed even more — and across each line and model. It opened October with a 64-day supply of cars, compared with 74 days a month earlier.

• AMC's inventory increased during the month, as sales of Alliance and Encore fell.

VW continued to trim its U.S.-car inventory, but its sales rate fell, too. Its domestic stockpile amounted to 44 days, its imports, 38 days, for a combined average of 40 days.

Domestic inventory shares on Oct. 1 were: GM, 48.32 percent; Ford, 30.22 percent; Chrysler, 16.78 percent; AMC, 3.93 percent; VW, 0.70 percent, and Honda, 0.05 percent.

The Sept. 1 shares were: GM, 49.16 percent; Ford, 30.20 percent; Chrysler, 15.26 percent; AMC, 3.56 percent; VW, 1.07 percent, and Honda, 0.75 percent.

• Subcompacts accounted for 21.35 percent of the U.S.-car inventory on Oct. 1; compacts, 25.23 percent; intermediates, 28.56 percent; standard-size autos, 15.49 percent, and luxury models, 9.37 percent.

A month earlier, shares were: Subcompact, 21.47 percent; compact, 26.63 percent; intermediate, 28.52 percent; standard, 13.89 percent, and luxury, 9.49 percent.

The Oct. 1 days' supplies by size class:

Subcompact — U.S.-built Honda Accords, 1; Fiero, 33; Chevette, 43; Rabbit, 44; Escort, 61; Turismo, 63; Pontiac 1000, 69; Charger, 72; Lynx, 72; Omni, 73; Horizon, 77; Daytona, 80; Alliance, 82; Laser, 82; Encore, 91, and EXP, 96.

Compact — Cavalier, 36; Skyhawk, 43; 2000 Sunbird, 47; LeBaron, 54; Mustang, 54; Tempo, 54; Firebird, 56; Topaz, 57; Firenza, 61; Cimarron, 63; Aries, 67; Reliant, 70; Camaro, 72; Capri, 95, and Eagle, 118.

Intermediate — Cutlass Supreme, 33; Marquis, 33; Cutlass Ciera, 34; Century, 36; Omega, 38; Skylark, 40; Pontiac 6000, 41; LTD, 42; Regal, 42; Celebrity, 48; Monte Carlo, 53; Cougar, 55; Bonneville, 56; New Yorker E-Class, 59; Grand Prix, 60; Dodge 600, 69; Phoenix, 74; Thunderbird, 77; Caravelle, 85, and Citation, 20.

Standard — Olds 88, 41; LeSabre, 46; Gran Fury, 64; Crown Victoria, 67; Grand Marquis, 67; Chevrolet, 71; Diplomat, 78, and Parisienne, 91.

Week's total dips slightly

Auto output holds above 160,000

By Louise Kertesz
Detroit Reporter

Slated domestic production of 163,921 cars last week dipped 1.49 percent from the previous week's 166,395.

Contributing to the slowed pace was buildout of the 1984 Chevrolet Cavalier, which cut the previous week's output of 9,427 units almost by half. Less overtime at Chrysler cut that company's build by 16.83 percent from the previous week.

Last week's estimated production of 163,921 cars was 1.85 percent higher than the year-ago week's 160,938.

Year-to-date, 6,218,728 cars have been completed, 19.40 percent more than the 5,208,432 assembled at this point last year.

Last week's production was shared as follows: General Motors, 54.06 percent; Ford Motor Co., 24.93 percent; Chrysler Corp., 15.65 percent; American Motors, 2.93 percent; Honda, 1.81 percent, and Volkswagen of America, 0.62 percent.

Two new lines have entered the production picture: Chrysler's LeBaron GTS and Dodge Lancer are now being assembled in Sterling Heights, Mich.

A second shift has been added at GM's Bowling Green (O.) facility to build Chevrolet Corvettes. Line speeds will be 12 per hour.

GM's Lordstown (O.) facility will be down until Oct. 17 for model changeover, and the Leeds (Mo.) plant will go down for model changeover on Oct. 17 until Oct. 22. Both plants produce J-cars.

GM scheduled two overtime shifts Saturday (Oct. 13) at these plants: Pontiac (Fiero); Flint (Buick G-line); Doraville, Ga.; Leeds, Mo.; Linden, N. J., and Willow Run, Mich.

One Saturday overtime shift was scheduled at GM plants in Wentzville, Mo., and Orion, Mich.

Chrysler scheduled two nine-hour daily shifts last week at plants in Belvidere, Ill.; Newark, Del., and St. Louis (No. 1 and 2). The Jefferson Ave (Detroit) facility worked two 8½-hour daily shifts.

VW aims for 275,000 sales led by new Golf and Jetta

Continued from Page 61

a Volkswagen," is being continued for all '85 lines.

VW ads highlight the prices of all its cars, and generally stress value, durability, driver control, German engineering and driving excitement. Versatility is the key with Golf.

In its magazine ads, VW ties its cars to each individual publication.

For example, a Ms. magazine ad uses the headline, "Finally. A centerfold Ms. readers can appreciate;" a W magazine ad says, "Volkswagen's in W" and a Vogue ad says, "Can you believe Volkswagens in Vogue?"

Other magazine ads play heavily on affordability, such as a multi-page ad that says "You could always buy a German road car. Now, you can afford one."

Magazines account for 41 percent of VW's media mix; network TV for 55 percent; newspapers for 3 percent and outdoor for 1 percent.

TV highlights Golf's versatility with a 60-second commercial comprised of six 10-second segments. As the announcer progresses, he becomes less and less sure of what the best feature of the new Golf is.

"The best thing about Golf is it's German-engineered handling . . . actually, best thing about German-engineered Golf is it's exceptional space . . . come to think of it, the best thing about Golf is it's remarkable durability" and so forth.

Arresting TV commercials for Jetta have a couple motoring from Frankfurt to Paris, under a "Getting there is half the fun; coming back is the other half" theme.

There is also a spot opening on the highway with an elephant with a "L. A. or bust" sign around its neck being invited into Jetta to demonstrate roominess. The car stops, half its chassis extended over a cliff, to demonstrate braking.

And, finally, a driverless car spot has the vehicle automatically shifting, steering and opening its doors to demonstrate its features.

Doyle Dane Bernback is VW's agency.

H&E names Fykse

CINCINNATI. — L. Dean Fykse Jr. has been named regional sales manager, Hess & Eisenhardt Co. Headquartered near Philadelphia, Fykse will be responsible for the marketing of Hess & Eisenhardt vehicles in the Northeastern U. S.

Truck production highest of year; 67,017 assembled

U. S. truck makers projected their best weekly build for 1984 last week: 67,017 units. The previous high for the year was 66,834 units completed during the week ended June 23.

Last week's expected output of 67,017 trucks was a 6.11 percent increase over the previous week's 63,161 and 17.97 better than the year-ago week's 56,808.

Year-to-date, 2,465,733 trucks have been completed, 33.61 percent more than the 1,845,410 assembled at this point last year.

General Motors scheduled overtime Saturday (Sept. 13) at its Pontiac facility (No. 5).

Ford Motor Co. also scheduled overtime Saturday at its Lorain (O.), Louisville (Ky.) and Wayne (Mich.) plants.

Holiday trims week's output in Canadian plants

The Thanksgiving holiday slowed Canadian car production last week, though it remained well ahead of last year's.

Also reflecting holiday schedules, the past two weeks' truck builds were the lowest since the week ended Spt. 8.

Makers pegged completion of 19,404 cars last week, down 12.36 percent from the previous week's 22,138, but 27.07 percent better than the 15,270 built the same week a year ago.

Year-to-date, 836,227 cars have been built in Canada, 11.49 percent more than the 750,059 assembled last year at this time.

Builders targeted assembly of 14,279 trucks last week, 2.75 percent behind the previous week's 14,683, but a 40.46 percent jump from the year-ago week's 10,166.

Chrysler's Windsor (Ont.) plant expected to complete 1,955 Plymouth Voyagers, 1,960 Dodge Caravans and 785 Mini Ram Vans last week, bringing the T-115 total this year to 178,436.

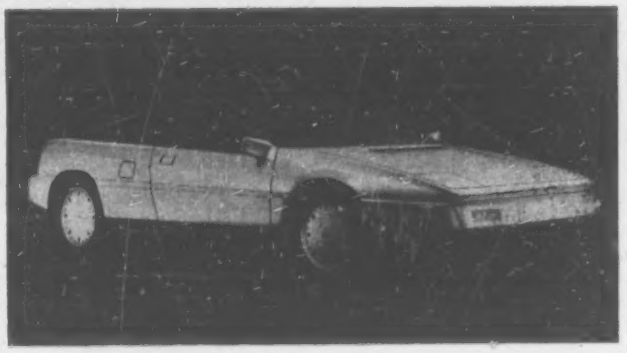
Panther Solo debuts at show

Solo is the name of Panther Car Co.'s new mid-engined two-seater which was unveiled last week at the International Motor Show in Birmingham, England. Pilot production will begin next year. Story on Page 20.



Lotus concept is a star

This mid-engine V-8 concept car by Group Lotus is one of the star exhibits at the International Auto Show at Birmingham, England. Designed by Ital's Giorgetto Giugiaro, the car "is not a runner, but is produceable," a Lotus executive said. Story on Page 3.

breaking news

Chinese want Audi, too

WOLFSBURG, West Germany — The Chinese have informally asked to assemble the Audi 100 (called the 5000 in the U. S.) on a trial basis in 1985, a Volkswagenwerk AG spokesman said. The Chinese are very interested in beginning assembly of 100 CKD kits next year in preparation for an annual output of 1,000 per year beginning in 1986, he said. A similar CKD trial plan was used in preparation for Chinese assembly of the Santana (Quantum).

Mercedes first to get simplified Japanese certificate

TOKYO.—Mercedes-Benz has become the first manufacturer to receive a type certificate from the Japanese Ministry of Transport under simplified import procedures for imported cars. The new procedures, adopted by Japan last August, require the maker to submit only one sample car and a set of documents. Mercedes-Benz will begin marketing its 190-E in Japan in November under the new procedure.

China buys 20,000 vehicles from Toyota

TOKYO.—Toyota has won orders from China for about 20,000 vehicles, according to the Japan Economic Journal. The paper said most of the vehicles involved are trucks, but a small quantity of cars to be used as taxis is included. Shipments are to be completed by early next year.

Canadian walkout costing company $100 million a week

Strike perils GM in U.S.

Marjorie Sorge
Labor Editor

TORONTO. — A strike called by the Canadian UAW against General Motors of Canada will close nine U. S. assembly plants by today (Oct. 22) and could cost the parent company about $100 million a week at the start.

A strike will stop production of full-size rear-wheel-drive cars at Flint; Detroit; Fairfax, Kans., and Wilmington, Del.; full-size front-wheel-drive cars at Orion, Mich., and Wentzville, Mo.; compact cars at Willow Run, Mich.; N-cars at Lansing, and van production at Lordstown, O. Those plants build some of GM's most popular cars including the new FWD C-bodies.

If the strike continues, it will also dramatically affect at least 14 other GM locations as well as GM suppliers.

"If you don't reach a settlement in 10 days and you walk away from bargaining, then you can be locked in for a long time, and I want desperately to try and avoid that," said UAW Vice President Robert White, director of the Canadian region.

Analysts estimate the strike could cost GM as much as $100 million a week. The one-week selective strike in the U. S. last month cost the company $125 million, analysts said.

The UAW called the strike last Wednesday (Oct. 17) after the parties failed to reach an agreement covering 36,800 GM workers.

Earlier in the week, GM presented the union with a final offer which White said was a "rubber stamp" of the contract recently ratified by the union in the U. S. But, he said, the offer provided less money than the U. S. pact and was "not ratifiable" in Canada.

"This is a General Motors strike," White said. "They are trying to fundamentally change the collective bargaining strategy and the collective bargaining program that has served us well for 25 years. That is a program based on annual improvement wage increases going into the base rate and cost-of-living."

The GM offer, like the U. S. contract, provides an average 2.25 percent wage increase in the first year, based on job classification, and 2.25 percent lump-sum payments in the second and third years.

Since early this year, White has said the Canadian UAW wants a Canadian agreement.

Rod Andrew, GM director of industrial relations, said the offer did address the Canadian situation and had "numerous changes" that were different from the U. S. pact. He said the proposal addressed wages, COLA, sickness and accident insurance, income security and time off the job differently. He would not elaborate.

According to White, the company offered an additional 8 cents an hour above the 2.25 percent average increase in the first year, but wanted the UAW to divert 9 cents more from COLA than was required in the U. S. The U. S. workers lost a total of 24 cents in COLA

Ford, UAW to team on Alpha small car

By Marjorie Sorge
Labor Editor

DETROIT. — Ford Motor Co. and the UAW will begin working together to create a new small car from the ground up, and Ford has vowed to spend more than 50 percent of its worldwide capital outlays in North America during the next six years, according to the new labor agreement.

In 1983, Ford's worldwide capital expenditures were $2.3 billion.

The new small-car project, coded the Alpha Project, will be headed by Henry Nida as general manager, and will allow the company and the union to work together on the total development of a new small car. If the efforts are successful, the car will be built in the U. S., the contract said.

The Alpha Project is Ford's version of the General Motors Saturn Project announced a year ago. In its pact with the UAW, GM promises to build the Saturn car in the U. S.

According to the contract, Ford will make use of its new Protected Employe Program (PEP) to retrain workers for the Alpha Project. The PEP program retrains laid-off workers for new jobs either inside or outside the corporation.

In a letter in the agreement, Ford told the union it was committed to having manufacturing presence and employment in North America. But, the company reminded the union that it must have flexibility to be competitive in a worldwide market.

"Ford's product mix is more heavily weighted to smaller cars than its major domestic competitor," the letter said. "The company has been and continues to be reluctant to engage in a higher level of offshore vehicles and component sourcing in the hope that it can become a competitive producer of small cars."

Ford has already decided to build the new front-wheel-drive Taurus and Sable in the U. S. for a fall, 1985, introduction. The investment in that program will be close to $3 billion, the letter said. Ultimately, more than 12,000 Ford UAW members will be employed in producing those vehicles.

During the last five years, Ford said, it has committed more than $8.3 billion in capital expenditures in North America for rennovation, modernization, and construction of its domestic manufacturing base. This investment represented more than 60 percent of Ford's worldwide expenditure during the period, the letter said.

Ford to shut down some parts depots

Chevrolet streamlines field setup

By Joseph Bohn
Marketing Editor

Chevrolet is closing down some zone offices and scaling back district and regional staffs in the largest realignment of its field sales operation ever undertaken by the division.

There are no indications of other GM divisions following suit. Some, like Pontiac, have gone the other way, reinstating regional managers eliminated during the depths of the recession, for example.

Chevrolet, though, was clearly due for a major realignment, according to dealers and factory people.

"We have the same structure as 20 years ago," said one Chevrolet source.

"With today's communication links and travel capabilities, many organizations have gone through a process of improving the way they do business like this," he added.

Indeed, even as Chevrolet concentrates on its field operations, Ford plans to streamline its parts distribution system over a four-year period by eliminating more than half of its parts depots and modernizing the rest.

Chevrolet confirmed plans to close its Long Island (N. Y.) and San Diego zone offices by Jan. 1, consolidating them with its North Jersey office in Parsippany, N. J., and its Los Angeles office, respectively.

It will have 39 zone offices by the first of the year, still a large number compared with 29 for Ford Division, for example, and 27 for Pontiac.

Observers feel that more will be closed.

• "They have zone offices in small, out of the way places like Fargo, N. D., which they've had for years," said one Ford zone manager. "We used to have a

Eminence displayed

Lotus is displaying the Eminence, a luxury sedan study, at the International Auto Show, Birmingham, England. The company has released this sketch and technical specifications, but it seems more like a 1990s car than one for this decade.

With Etna, new V-8 and limousine

Lotus display heralds comeback

By Richard Feast
European Editor

HETHEL, England.—The mid-engine concept car named Etna, the powerful V-8 engine and the limousine project known as Eminence are clear signs of a returning confidence at Group Lotus.

The three are currently among the star exhibits at the International Auto Show at Birmingham, England (Oct. 20-28).

With so many high-tech developments spilling out of the group, it decided not to display the joint Lotus-Toyota X100 sports car at the show. Instead, that car will debut at the Birmingham show in 1986 — by which time it will be in production and on sale across the world, including the U. S.

The Lotus Etna is a sleek piece of design by Ital's Giorgetto Giugiaro. It features Lotus' light alloy V-8 engine, a non-steel monocoque construction chassis and the company's patented active suspension system which dispenses with conventional springs and dampers.

The Etna is slated to go into production in 1988.

The public display of the V-8 powerplant — it has been an open secret for several years — is an indication that Lotus has found a volume production customer for it.

No one at Lotus is saying just who that buyer is, but in view of Toyota's shareholding in the company (16.5 percent), it must be considered one of the possibilities. Chrysler Corp.'s name has also been mentioned in connection with the V-8.

• Lotus Chairman David Wickins is the man behind the Eminence four-door limousine project. It was conceived as a high-performance, secure six-seater for heads of state.

Lotus publicity material makes specification comparisons with vehicles like Rolls-Royce, Mercedes-Benz 500-SEL, Daimler limousine and Cadillac Fleetwood limousine.

The X100 exists in running prototype form. While it was planned for exhibition at Birmingham this year it was never intended for production until 1985 at the earliest.

Now, production is planned for the fall of 1986, and—a first for Lotus — a simultaneous worldwide sales launch is in preparation.

Around 1,500 will be made in the first full year of production, rising to just over 3,000.

The front-engine/rear-drive two-seater will be made in cabriolet and coupe form. It will use Toyota's 16-valve four-cylinder engine, together with Japanese transmission and suspension components.

Giugiaro's ideas for the Etna are for a wedge shape with softly rounded edges. The upper section of the body is a composite skeleton frame clad entirely with dark, tinted panels. The glass roof section is removable and photo-sensitized to reduce light and heat transmission.

• Front and rear moldings are from reinforced urethane, but the main body/chassis construction uses new concepts.

Upper and lower moldings manufactured by the Lotus VARI (Vacuum-Assisted Resin Injection) process include integral foam-filled beam sections which, when bonded into a unitary structure, provide the dynamic and safety strengths. Carbon fiber and Kevlar reinforcement are used in load-bearing areas.

The company's so-called active suspension, which uses microprocessors to "read" road surfaces and adjust wheel movements accordingly, is used. Anti-lock brakes, also microprocessor controller, are used.

The fully trimmed car weighs 2,600 pounds. It has a length of 168 inches and sits on a wheelbase of 99 inches. Height is 45 inches.

Power unit, mounted centrally and driving the rear wheels, is the 4-liter V-8 with four valves per cylinder.

Eminence, the limousine project, is at a much earlier stage of development. The company has released a sketch and technical specifications, but it would seem more like a 1990s car than one for this decade.

• Much of the Etna is carried over: The V-8 engine, non-steel monocoque body/chassis and active suspension. Electronic selection of two- or four-wheel drive is promised.

The six-seater design has an overall length of 215 inches and a wheelbase of 140 inches.

After a difficult period in the early 1980s—DeLorean development, Inland Revenue tax claims, Colin Chapman's death, a sales famine and company restructuring — Lotus now has "cash in the bank," according to Wickins.

Within two years, he said, it could have a turnover of up to $62 million compared with $16 million last year.

It made pre-tax profits last year of 275,000 pounds ($340 million) compared with a loss the previous year of more than 2.1 million pounds. First-half results for this year were also encouraging.

Contract provides a moratorium on plant closings

UAW Ford Council OK's new pact

By Marjorie Sorge and Michelle Krebs

The UAW's 160-member Ford Council voted overwhelmingly last week to recommend approval to the membership of a new three-year contract which basically follows the pattern set at General Motors.

The Ford agreement will cost the company about 30 percent of the GM pact because of the smaller workforce. The cost of the GM contract has been estimated at $7 billion.

Unlike the GM pact, the new Ford agreement provides a moratorium on plant closings during the life of the agreement and seniority protection for workers laid off for any reason. It also makes some changes in health care. The GM contract raised the amount of co-pays in vision care while Ford's stays the same.

The ratification is expected to be completed by Oct. 28.

"It is an excellent agreement that meets our needs not only for the present but the future as well," UAW President Owen Bieber said after the Council meeting in Detroit last Thursday.

• Bieber said the contract's basic ingredient is job security, but it also includes pension increases, protection of health-car benefits without the employes contributing to the cost and a "reasonable and realistic wage increase."

The job security program at Ford is called the Protected Employe Program and has a $280 million investment from the company. Workers laid off because of outsourcing, new technology, productivity or transfer of work will be retrained to take jobs in other locations inside or outside Ford.

There is also a Golden Handshake for workers with 10 years or more seniority who are at least 55 years old which gives them a lump-sum payment from $10,000 to $55,000 to give up their seniority when they take early retirement.

In addition, there is a $30 million new venture fund which allows the company and the union to seek out new business possibilities.

While the moratorium on plant closings protects workers from future cuts, the union was unsuccessful in getting Ford to reconsider closing the eight parts plants it had already announced.

Under the outsourcing agreement, Ford has promised to consult with the UAW when its decision will affect 25 or more workers.

Ford is bringing cars in from the European operations. The Merkur is being imported for the 1985 model year and the Granada will be here by 1987.

• As in the GM agreement, workers get an average 2.25 percent wage increase in the first year of the pact and a 2.25 percent lump-sum payment in each of the next two years.

As at GM, $2.99 of the $3.04 accumulated cost-of-living-adjustment (COLA) was folded into the base wage raising the average rate to $12.83. GM' is $12.82.

Pensions were also increased from $935 a month for early retirement to just over $1,200 a month by the end of the agreement. Regular retirement benefits would increase $3.85 a month per year of service.

There is also a COLA diversion of 13 cents per hour over the three years which will be diverted to the company for certain benefits. That is worth about $29.6 million to the company. The 11-cent COLA travel, the money accumulated in COLA since July, was eliminated for a total COLA loss of 24 cents per hour.

In addition, the union got a prepaid legal services plan, a one-time-only $180 cash payment and a $20 million increase in the Guaranteed Income Stream (GIS) bringing the GIS total to $65 million. The GIS provides laid-off high-seniority workers with paychecks if they are laid off due to outsourcing.

Honda to ship Accord from U.S. to Canada

MARYSVILLE, O. — Honda plans to send about 1,000 Accords built here to Canada during the 1985 model year, and up to 3,000 per model year thereafter until Honda's Canadian plant begins production in 1987.

The U. S.-built Accords will supplement Japanese-built Hondas that are limited by quotas to what is expected to be about 53,000 units this year, said Ralph Luciw, Honda Canada vice president - national automobile advertising. About 45 percent of Honda's Canadian sales have been Accords.

Honda Canada may not receive the maximum allotment from the U. S. because of strong demand for Accords in the States, he said.

A spokesman for American Honda said the 1,000-unit allotment for this calendar year represents about two days' production at Marysville.

Its first-year output of 19,000 Accords is scheduled to rise to 40,000 units by 1989 when the Civic line will be added. Initially, all Canadian-built cars are scheduled to be sold in Canada.

Taking potshots at Henry Ford's business and personal life

Iacocca complains and explains in his life story

By Marjorie Sorge

Lee Iacocca complains and explains in his book Iacocca: An Autobiography (Bantam Books, $17.95).

It is one man's view of his place in automotive history and is, of course, comprised of his personal memories.

It went on sale Oct. 16, his 60th birthday and the sixth anniversary of his joining Chrysler Corp. after his much publicized firing as president of Ford Motor Co. by Henry Ford II.

It is that chapter that most readers will turn to first to find out what Iacocca says really happened.

Iacocca's firing was reported first by AUTOMOTIVE NEWS.

According to Iacocca, he was fired simply because Henry Ford II didn't like him.

"We've just made a billion eight for the second year in a row," Iacocca told Ford. "That's three and a half billion in the past two years. But mark my words, Henry, you may never see a billion eight again. And do you know why? Because you don't know how the (expletive deleted) we made it in the first place!"

Throughout his autobiography, Iacocca takes shots at Ford's personal and business life. In one case, he says Ford asked him how much income tax he paid. Iacocca replied no matter how he cut it, he paid 50 percent of his income.

Ford said he was worried since that year he had to pay $11,000, the first time he'd paid taxes in six years. When Iacocca asked how Ford did it, he said his lawyers took care of it.

"Look," Iacocca said, "I'm not against using whatever loopholes the government allows us. But the guys who work in our factories are paying almost as much as you are! Don't you think you should be paying your way? What about the national defense? What about the Army and the Air Force?"

Such a statement is self-serving as is much of the book and are most autobiographies.

But, still, the book is good reading. It has a bit of everything a book needs to be a best seller—intrigue, mystery and a few telltale lines about the life of the very rich.

Those tales are interesting especially since they are seen through the eyes of a man whose father lost everything during the Depression and had to build it up again. That's similar to the Chrysler situation.

Throughout the book, it is those memories that seem to play a part in many of the de-

THE JAPANESE

Everything's coming up rose-colored

Photo by Joe Wilssens

When Japanese eyes are smiling,
Sure, 'tis like a morn in spring.
In the lilt of Tokyo's laughter,
You can hear the Shintos sing.
Ancient Japanese folk song.
—Anon.

Ah, faith and tempura! Sure, and 'tis been a fine winter, spring, summer and fall this year in the land of cherry blossoms and auto plants.

It's no surprise, then, that Japanese eyes are truly smiling, for—as 1984 winds down and 1985 c r a n k s up—everything's coming up rose-colored in the Land of the Rising Sun's adventurous auto industry.

Thanks in part to a bustling U. S. e c o n o m y, and helped rather than hindered by U. S. import quotas on their cars, Japanese auto companies are hauling in dollars hand over fist, and are gazing anxiously ahead to next spring when their voluntary restraint agreement (VAR) ends and some 1.9 to 2.3 million Japanese cars a year are ready to rush into the U. S. (Page E-16).

With that thought tickling their marketing fancies, the Japanese are injecting h e a v y doses of high-tech into products they are preparing to export to the U. S. next year, thereby seeking to enrich the appeal and profitability of cars and trucks sent here (Page E-2).

Other trends are t r a c e d in this special Automotive News Extra on "The Japanese":

They are becoming increasingly aggressive in global plans to build factories in major vehicle markets and form joint operations with overseas rivals (Page E-6).

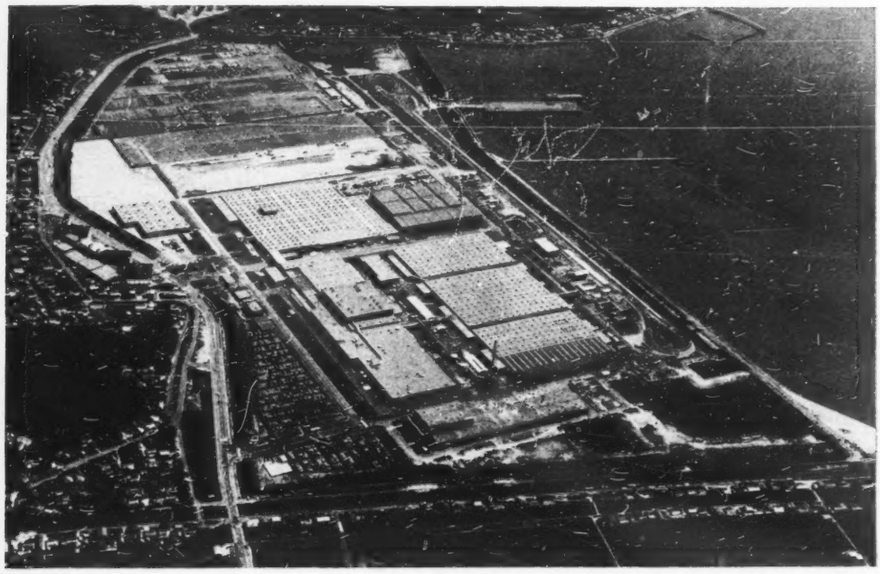
They are continuing to dominate g l o b a l manufacturing, turning out 11.1 million vehicles last year, good for 27 percent of all vehicles produced worldwide, while topping the U. S. and European Economic Community for leadership the fourth straight year (Page E-8).

They are preparing to send a giant wave of big vehicles — medium and heavy-duty trucks, and diesel equipment—to U. S. shores in the near future (Page E-20).

The ranks of Japanese car-making facilities in the U. S. are swelling as Honda and GM-Toyota step up the action, and a Nissan Sentra model gets ready to go into production in Tennessee next April (Page E-26).

Wrapping up this section are a rundown on Japanese vehicle exports (Page E-30) and a study of Japanese labor rates and practices throughout the world (Page E-28).

—Al Fleming, Industry Editor



Newest plant in Japan is Mazda's sprawling assembly operation for its 626 car line at Hofu.

Vehicle production giant

North America is Japan's largest market

By John Hartley
Staff Correspondent

With a total production of 11.11 million vehicles, Japan built 27.8 percent of all vehicles produced worldwide last year. For the fourth successive year, output exceeded that in either the U.S. or the European Economic Community. This year, output is expected to increase slightly.

Although Japan produces a large number of passenger cars, it is also a big producer of light trucks in the one- to three-ton capacity class. Thus, last year, passenger car production amounted to 7.15 million, while 3.96 million trucks were built. It also has a substantial heavy-duty truck industry, which apart from Mitsubishi and Isuzu consists of Hino, affiliated to Toyota, and Nissan Diesel.

Interestingly, 90 percent of Japan's passenger car production is for autos with engine capacities of 551-2,000 cc. Midgets of less than 550cc account for 2.9 percent, and cars of over two liters only 6.9 percent. However, in Japan, sales of autos in the 2.0-3.0-liter class are relatively strong, an indication that it is in the lower classes that the Japanese have established their export markets. They are still unable to sell their more luxurious models overseas in worthwhile volume.

In total, Japan exported 3.8 million passenger cars and 1.86 million trucks last year, and the largest exporters of passenger cars are: Toyota, 1.069 million; Nissan, 953,000; Honda, 603,000; Mazda, 590,000; Mitsubishi, 302,000; Fuji (Subaru), 142,000; Daihatsu, 63,000; Isuzu, 44,000, and Suzuki, 37,000.

Despite voluntary restraint, North America still remains the largest market by a substantial margin, with 2.447 million units last year. Exports to Europe have increased from 956,000 to 1.27 million in the period 1979-83, while exports to the Middle East have increased by about 50 percent from 389,000 to 623,000 in the same period. Southeast Asia took 539,000 vehicles, and Oceania, which includes Australia, 346,000 units. Exports to South America and Africa are running at over 200,000 units each.

Toyota, despite being by far the biggest producer and exporter of built-up units is not the biggest exporter of KD sets. Nissan is the biggest with 211,000 sets (8.5 percent of production), followed by Mazda with 174,000 sets (14.8 percent) — including many sold to Ford—followed by Honda with 139,500 (13.5 percent). Then comes Toyota with 139,000 sets (4.2 percent). Mitsubishi shipped 67,000 sets (6.8 percent in 1983, while Isuzu's business seems to be dwindling. In 1983 it shipped 28,600 sets (7.3 percent), down 38 percent from 1982.

The Japanese are blessed with a large domestic market. Passenger car sales amounted to 3.03 million units last year, which although small compared with the 7.7 million in the U.S., is 50 percent bigger than West Germany's 2.15 million or France's 2.05 million.

A profile of each company follows in the tables below. Total employment in each is small. One reason for this is the undoubted efficiency of the plants, but another important factor is that the Japanese produce far fewer components in-house than their American and European rivals. For example, whereas there are 59,000 employed by Toyota, the main subsidiaries employ another 40,000, without taking into account Nippondenso, the component supplier in the Toyota group, which employs another 27,000 people.

In the Nissan group, employment by affiliates is greater than that by the parent company, and in all cases there are many small companies which rely almost exclusively on one of the auto companies for the bulk of its business. Thus, when it comes to employment and the operations performed, the auto companies themselves are just the tip of the iceberg of the Japanese auto industry. □

Overseas plants	Truck plant, Smyrna, U. S., Motor Iberica (subsidiary) truck complex, Spain, engine and body assembly in Mexico, plant planned in UK, and many KD plants

Mazda Motor Corp.

Chairman, age	Masaji Iwasawa, 71
President, age	Yoshiki Yamasaki, 70
Number of employes	27,300
Total production, 1983	1.17 million (861,000 passenger cars, and 309,000 trucks and buses)
Main plants:	
Body assembly	Hiroshima, Hofu
Number of employes	22,463 2,521
Engine/transmission plants	Hiroshima, Miyoshi
Employes	See above, 414
Main subsidiaries and affiliated companies (employes)	Kurashiki Chemical Co. (700)
Overseas plants	Many KD plants

Mitsubishi Motors

President, age	Toruo Tojo, 70
President, age	Toyoo Tate, 64
Number of employes	25,000
Total production, 1983	984,549 (530,096 passenger cars, 454,453 commercial vehicles)
Main plants:	
Body assembly	Nagoya, Okazaki, Mizushima
Number of employes	2,700 1,600 5,900
Engine/transmission plants	Kyoto, Shiga
Employes	3,700 170
Main subsidiaries and affiliated companies	Tohoku Mitsubishi Automotive Components, Kureha Motors Corp., Japan Automotive Engineering Corp.
Overseas plants	KD plants in 24 countries, mostly joint ventures or locally owned. The company also has a small stake in Hyundai Motors, Korea, which produces mechanical units under license, and is about to start to produce a front-wheel drive auto based on Mitsubishi design, and is involved in a similar way in the Malaysian auto project.

Daihatsu Motors

Chairman, age	Sakae Ohara, 67
President, age	Tomanaru Eguchi, 63
Number of employes	10,500
Total production, 1983	530,132 (184,088 passenger cars, 346,044 commercial vehicles)
Main plants:	
Body assembly	Ikeda, Kyoto
Number of employes	2,853 1,416
Engine/transmission plants	Shiga
Employes	1,512
Main subsidiaries and affiliated companies	Kanbishi Electric Manufacturing, Asano Gear, Akashi Kikai, Aoi Machining Industry, Fuji Seat Co., Daihatsu Metal Industry, Daihatsu Auto Body

Isuzu Motors

Chairman, age	Kenjiro Sano, 64
President, age	Kazuo Tobiyama, 59
Number of employes	15,199
Total production, 1983	390,701 (116,184 passenger cars, 274,517 commercial vehicles)
Main plants:	
Body assembly	Fujisawa, Kawasaki (commercial vehicles)
Number of employes	8,380 4,000
Engine/transmission plants	Fujisawa, Kawasaki, Tsurumi, Tochigi, Hokkaido
Employes	See above 240 920 80

Overseas plants	Vehicles built from KD kits in ten countries, including Spain, India, Pakistan, the Philippines and New Zealand

Japanese car makers are in the money

Nearly 80 percent of their profits come from the U.S.

By Michelle Krebs
Financial Editor

Thanks to a booming U. S. economy, and motivated by voluntary import restraints, the major Japanese auto companies are making more money than ever. And they're doing so with little change in sales volume.

Nearly 80 percent of the Japanese auto makers' latest fiscal-year profits came from the U. S., where they currently are restricted to total sales of 1.85 million passenger cars a year, said Mori Matsumoto, vice president of institutional sales of Yamaichi International (America) Inc., New-York-based unit of one of Japan's major securities firms.

"It's a little recognized fact that Japanese auto profits right now are at record levels in the U. S. with the quotas," said auto analyst Maryann Keller, a director of Vilas-Fischer Assoc. She estimates Japanese auto makers collectively made one trillion yen (more than $4 billion at current exchange rates) in the U. S. this year.

The Japanese companies' overall profits, however, were offset by losses in their home market, where demand has been weak, as well as other countries.

The Voluntary Restraint Agreement (VAR) has allowed Japanese companies to upgrade their product mix and increase prices, adding to profitability. The current agreement expires next April.

Toyota Motor Co. and Nissan Co. Ltd. enjoyed record dollar sales this year, although unit sales were up only marginally.

The only substantial gain the Japanese companies made in unit sales were in CKD kits, cars with less than 50 percent Japanese content and assembled in other countries. Toyota's CKD exports increased about 25 percent, Nissan's were up almost 40 percent.

Toyota showed the biggest increase in unit sales with a five-percent gain. On that, the company rang up sales equivalent to $25 billion, up 11 percent from the year before.

Nissan, which celebrated its 50th anniversary in 1984, recorded sales of nearly $15 bilion, up 8.5 percent from the preceding year, on unit sales that were up only 1.5 percent.

Nissan's net income showed a 26.1 percent decline, because, the company said, the yen was stronger. (The yen has fluctuated from 220 to 245 per dollar, down from about 277 two years ago.) Nissan's ventures in Spain, Italy and Mexico, where heavy capital investments were made, also have not been as profitable as its U. S. operations.

Honda Motor Co., which celebrated its 35th anniversary, set a new sales and income record, mainly because of the strong U. S. market.

Japan's smaller car producers, however, are not sharing in the wealth. Since the allocations under VRA are determined by the company's market share prior to the restraints, the smaller companies virtually have been frozen out of the U. S. market, Matsumoto said.

Small companies had geared up for greater production capacity, anticipating an increase in exports to the U. S. As it turned out, however, Isuzu, for one, is operating at less than 40 percent capacity after building a new facility, noted Ted Sullivan, analyst for Data Resources Inc.

Moreover, the smaller producers' predicament may not be cured simply by lifting or liberalizing import restraints, as is expected to happen.

Analysts believe Japanese car companies will continue to show export restraint, even if quotas are lifted next spring, because they want to protect profit margins and ward off attempts to institute U. S. protectionist policies.

Japanese exports to U.S. in '85 forecast at 1.9 to 2.3 million.

Analysts currently are forecasting Japanese exports to the U. S. in 1985 at anywhere from 1.9 to 2.3 million units.

Matsumoto, who expects U. S. sales of Japanese cars to increase by 10 percent in 1985, wonders how Japanese producers will fare if restraints are lifted.

The future of the U. S. economy is an enigma, many analysts predicting a downturn by late 1985. Thus, Matsumoto questions whether U. S. consumers will continue to pay premiums for Japanese automobiles, especially as U. S. car companies polish their products' image.

Martin Anderson, an independent consultant in Massachusetts, takes a different tack. He sees room for the smaller companies because their products sell well and at high prices. In addition, they don't need huge volume increases to gain profits, he points out.

"The Mazda 626 is selling for as much as $2,500 over sticker price in the Boston area, so there's plenty of room for Mazda to do well," Anderson said.

The biggest problem for smaller producers, Anderson said, will be the lack of a large enough dealer network.

A number of trends are emerging among Japanese auto companies, analysts note.

For one, their per-unit costs are rising for the first time, mainly because of a richer product mix in their car lines.

"It's a fundamental change in strategy. They're joining the ranks of European and U. S. auto companies of offering loaded vehicles," said Anderson.

In addition, Anderson detects a divergence among Japanese companies. Previously, they all moved in the same direction, but now they are developing individual philosophies.

Honda is the favorite Japanese auto maker among the analysts interviewed because of its aggressive international strategy.

"Honda is absolutely brilliant," said Anderson. "They should be written up in a textbook on how a small company should go international."

Despite heavy investments in plants outside of Japan, Honda's balance sheet remains strong. In addition, the company's management has been particularly adept at understanding other cultures, "which is more important than just putting up a factory," Anderson said.

Honda also is Matsumoto's number one pick. Honda is concontinually improving its brand name recognition, he said, "and that is true in the U. S. as well as in Japan." In both countries, Honda is popular among young buyers, and Matsumoto sees Honda becoming even more successful as those young people become more affluent.

Matsumoto said Nissan also will be "worth watching" in the next few years because it, too, is aggressively flexing its international muscle, although it currently is suffering what Anderson calls "digestive distress."

Matsumoto said Toyota, which he considers to be first in product quality and reliability, has been too conservative in building plants overseas and should be following the lead of Honda. Toyota's U. S. car-making venture with General Motors Corp. isn't enough, he said. "They are three times bigger than Honda so it should be internationalizing three times faster than Honda," Matsumoto said.

Going international will become particularly important in the future as Japan's domestic car demand stalls. Automotive News World Outlook, generated in cooperation with Data Resources Inc., shows a stagnation of new car sales in demand next year and gradual increases throughout the decade.

"Any producer who is not internationalized in the next 10 to 15 years will be in trouble," said Anderson. "The winner in the 1990s will be the ones able to operate multiple world facilities."

He doesn't write off Toyota but said Toyota faces a long lead-time in a process that is made up of small steps, whereas Honda and Nissan already have developed their strategies and taken those small steps. □

FINANCIAL RESULTS FOR JAPAN'S AUTO MAKERS

	Yen Sales (In Billions)	Dollar Sales (In Millions)	Percent Change	Net Income Yen (Billions)	Net Income Dollars (Millions)	Percent Change	Unit Sales	Percent Change
TOYOTA—For fiscal year ended June 30, 1984	5,909.0	$25,145	+11.0%	294.8	$1,255	+29.2%	3,369,893[1]	+ 5.0%
NISSAN—For fiscal year ended March 31, 1984	3,460.1	14,724	+ 8.5	70.5	300	−26.1	2,499,368[2]	+ 1.5

ISUZU—For fiscal year ended Oct. 31, 1983	684.6	2,913	− 4.8	5.3	22	−12.4	377,373	−11.1

Notes: (1)Excludes CKD kits which totaled 106,700, up 24.8 percent from last year. (2) Excludes CKD kits which totaled 224,740, up 39.8 percent from last year. (3) Includes only automobiles, not motorcycles. (4) Includes 162,220 CKD kits. (5) Includes 69,500 CKD kits. (Dollar figures in all cases are translated at 235 yen equal $1.)

Youth for Understanding's 100,000th exchange student, Andy Goldfarb, holds a letter of congratulations from President Reagan while YFU founder Rachel Andresen and Mazda (North America) Inc. president Akira Toriyama look on.

Youth for understanding

Mazda provides student scholarships

Youth for Understanding, an international student exchange organization, recently honored its 100,000th student, Andy Goldfarb, of Allentown, Pa.

Goldfarb, 16, a senior at Phillips Exeter Academy in New Hampshire, traveled to Kyoto, Japan last summer on a scholarship provided by Mazda Motor Corp.

The teenager was guest of honor at a Washington D.C. reception at the Youth for Understanding International Center. During the evening's festivities, White House aide Eileen Petersen, associate director for Public liaison-youth affairs, delivered a letter to Goldfarb from President Reagan congratulating the youth for his part in the Youth for Understanding exchange program. The letter reads:

"Congratulations on becoming Youth for Understanding's 100,000th exchange student. You, your family and Youth for Understanding should be proud of your achievement and Mazda Motor Corp. can take pride in its scholarship program which allowed you to pursue your studies in Japan.

"Nancy and I are firm believers in student exchange and cultural awareness. For this reason, we created the Presidential International Youth Exchange Initiative, which is an ongoing program.

"Best wishes for your continued success."

Akira Toriyama, president of Mazda (North America) Inc. said, "Mazda is fortunate to be the sponsor of the 100,000th YFU exchange student. As Mazda's relationship with many countries throughout the world continues to grow stronger, we are constantly reminded of the importance of cultural awareness between nations. YFU takes an important step in this direction, and Mazda looks forward to continued support of this program."

Toriyama said the auto company is planning to expand its sponsorship commitment next year. In addition to sending 10 American students to Japan for the summer, the auto company will bring three Japanese students to the U.S. for a year.

Rachel Andresen founded YFU in 1951. Her goal was to replace hostility between suspicious nations with friendship and understanding. Andresen said, "Andy's participation as the 100,000th student symbolized the contributions of thousands of others who have actively engaged in strengthening international friendships through YFU over the past three decades." □

Coatings deal

New company formed

IRVING, Tex. — Diamond Shamrock Chemicals Co. and Tokyo-based Nippon Oil & Fats Co. Ltd. have signed a definitive agreement forming a previously announced international corrosion-resistant coatings business headquartered in Chardon, O. The name of the new corporation is Metal Coatings International Inc.

Under the agreement, the two companies will each contribute various assets including expertise in technology, licensing and marketing. A letter of intent to form the 50-50 joint venture was signed July 3.

The new company, which will continue the business activities formerly conducted by Diamond Shamrock Chemicals Co.'s Metal Coatings Division, licenses proprietary coatings that protect steel and aluminum against corrosion.

Daniel Rakich has been named president and chief executive officer of the new firm. According to Rakich, "The formation of Metal Coatings International will strengthen our worldwide sales and marketing effort."

Diamond Shamrock Chemicals manufacturers and markets commodity and specialty chemicals. Nippon Oil & Fats Co. is primarily a paints, chemicals and food products firm. □

Big-vehicle wave moving in from Japan

U.S. is biggest and brightest of remaining targets

Something is happening in North America that has the heavy-duty vehicle and diesel market quaking. In fact, the medium and heavy truck, construction vehicle and other big-equipment markets in the U. S. are waiting for a great wave they know is coming.

Riding the wave, from across the Pacific, are such names as Isuzu, Komatsu, Hino, Mitsubishi and Nissan.

Currently, the medium and heavy-duty vehicle population in the U. S. is nearly all domestic. The same is true in the construction and agricultural vehicle market.

But as market observers point out, the same could be said of the U. S. passenger car and light-truck markets not too many years ago; and now that Japanese producers have pretty much exhausted their market penetration prospects for big vehicles in overseas markets, the U. S. is the biggest and brightest remaining target.

"A serious look at the North American heavy-duty segment justifies concern by domestic OEMs," notes Gregory Macosko, principal in ACS Ltd., a consulting firm in Stamford, Conn. "We feel the heavy-duty market will be the next battle ground, although domestic producers (of big equipment) are not as vulnerable as their cousins in the car business."

Macosko adds: "The most heartening developments are actions taken by U. S. manufacturers to shore up positions for the onslaught. There is little doubt that the Japanese are coming, which is born out by the events of the last six months.

"They will cut prices, keep quality high and enter by predictable paths pioneered in the automotive market. Their primary objective will be market-share growth by penetrating a narrow product segment, usually at the less-expensive low end of the market.

"The no name-plate route is being followed by Isuzu which is currently selling medium diesels as Chevrolet Tiltmasters and GMC Forwards. At the same time, Isuzu is speeding up a move to independence by offering its smaller KS truck through a growing dealer network. All imported trucks are fully Isuzu from chassis to engine, and larger trucks could be sold to buyers familiar with the GM Isuzu models," says Macosko.

The joint-venture route has been followed by Japanese automotive manufacturers to license products from, or jointly develop technology with, U. S. companies. "The diversity of the construction equipment market has made joint-venture important, and Komatsu has followed this approach," says Macosko.

Since the late 1960s, Komatsu has worked under various agreements to improve its diesel technology and develop excavator and loader lines. After a 10-year gestation period, Komatsu began to seriously challenge Caterpillar's U. S. position by introducing many new products.

"Expanding from a few models of durable and flexible bulldozers, Komatsu has an equipment line which should enable it to increase market penetration and assemble a solid dealer network," says Macosko. "And its expansion is not stopping in the construction market. It is already investigating industrial and agricultural applications for its diesel engines."

The direct-entry route was initially followed by Toyota and Nissan who prefer to take first-hand market experience home and incorporate it into product designs and manufacturing technology. These two giants are now using their considerable knowledge of the North American market to quickly develop a significant position in mid-range and eventually heavy duty trucks.

"Hino/Toyota and Nissan Diesel are carefully separating their truck and automobile organizations, and will undoubtedly tailor sales and service to the specific needs of truckers," says Macosko. "The experience and quality image of these two companies will lower the risk of a quick and direct approach. Hino's confidence is high, and it wasted no time setting up an assembly plant."

Macosko says a "feeling of inevitability" prevades heavy-duty participation by the Japanese and they will carve out a position for themselves. But some significant characteristics differentiate the automotive and the heavy duty segments, he says. "The Japanese will have to account for this in their market penetration plans, and over-confidence may not be appropriate at this point. U. S. manufacturers should try to turn these differences to their advantage."

One critical factor is customer loyalty. Heavy-duty owners do not turn over their trucks and equipment as frequently as car owners do, and the average truck is older than the average car. Breaking this foundation of customer loyalty will require a wide price and quality differential.

In the 1970s, imported cars competed effectively in the compact segment because U. S. auto makers had limited manufacturing and selling experience in this segment, and because the sharp rise in gasoline price accelerated the shift to smaller cars.

But U. S. heavy-duty manufacturers are addressing the price differential, and there is no overwhelming operational cost factor such as fuel price, which is forcing heavy-duty buyers to question traditional loyalties.

"The Japanese have wisely selected medium diesels as their point of penetration, and U. S. manufacturers should not ignore the implications of this move," Macosko says.

Then there is engine/truck integration. Trucks are the largest diesel segment, and the separate identity of truck and the engine is unique to North America.

While Mack and Mercedes are fully integrated producers, a typical Class-8 truck can be purchased with a variety of engines supplied by different engine OEMs. This independence of choice is valued by truckers and presents problems for importers who prefer uniformity. However, smaller trucks are not usually sold this way, which is one reason why the Japanese are entering this segment.

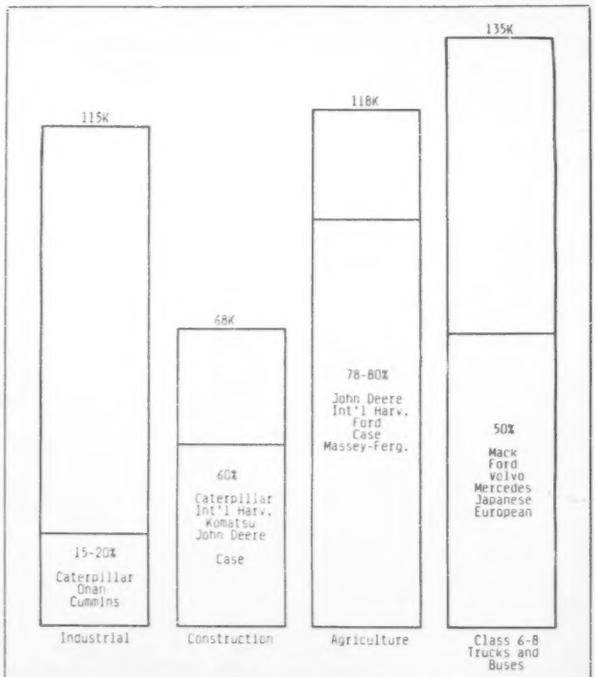
Ford is shifting toward full integration, and Volvo and Mack are selling more integrated medium trucks. An important factor in the Class-8 segment will be whether or not Mercedes eventually prohibits the installation of competitive engines in Freightliner trucks.

"Mercedes' acquisition of Freightliner should make truck OEMs seriously consider a long-term relationship with a single engine supplier. The only way engine OEMs can strengthen their position is by increasing opportunities for truckers to stipulate a variety of engines in smaller trucks. This will not be easy," Macosko says.

As for the dealer/service network, at least 60 percent of heavy-duty equipment parts are sourced through OE dealers. Unlike the automotive market, truck and equipment dealers and manufacturers have guarded replacement part sales. Foreign equipment manufacturers will have a particularly difficult challenge matching the coverage of domestic manufacturers because dealer parts and services are highly profitable.

"Domestic OEMs have large equipment populations, and a strong dealer will think twice before trading aftermarket revenue for the narrow margins on new equipment sales," says Macosko. "The Japanese are trying to attract strong dealers who will add a new line of equipment to their existing domestic line. U. S. manufacturers might consider the risks of forcing their dealers to choose between competing lines of equipment."

Traditionally the heavy-duty market has been generous to most participants, but first the recession and now stiff competition are undermining profits. "Every offensive and defensive opening should, and undoubtedly will be examined by Japanese and U. S. manufacturers," says Macosko. □



The chart depicts North American diesel engine sales in heavy vehicle and equipment markets, total versus integrated manufacturers, for year 1983.

Trevellyan's 25th

Jim Trevellyan, left, Trevellyan Oldsmobile - Subaru Co., Mission Valley, Calif., receives a 25 - year - dealer plaque from John Lennon, Oldsmobile's Los Angeles zone manager.

Isuzu for MVP

Boomer Wells, an American baseball player playing in the Pacific League in Japan, has been selected as the Most Valuable Player in the league for 1984. In recognition of the award, Isuzu presented him with a new Piazza sports coupe. Wells chose to have the same car, called the Impulse in the U. S., delivered to his home in Emerson, Ga.

Nissan Diesel is on the way

Bets are on a Group 8 commercial vehicle

By Arthur Flax
Assistant Truck Editor

If one were a bettor, one might like to wager that Nissan will be the next Japanese manufacturer to sell commercial vehicles in the U. S.

But it wouldn't be much of a gamble. Nissan Diesel America Inc. has been placing ads in at least one truck fleet maintenance publication here, and the firm has set up headquarters in Irving, Tex.

If one wanted to place a truly interesting bet, one might wager that Nissan will sell a heavy (Group 8) commercial vehicle here.

Niro Tamada, who is "in marketing for Nissan Diesel," said, "We want to market products in the U. S. in the near future."

The specifications for such products, he said, have not been decided. However, Tamada noted that Nissan Diesel America is a separate unit from Nissan's U. S. car marketing arm, specializing in heavy trucks.

"Generally speaking," he said, "we are manufacturers of gross vehicle weight trucks from 20,000 to 100,000 pounds."

Tamada added, "From a marketing point of view, Nissan Diesel will have to sell a whole line of product, but it is very difficult. If we sell a whole line, we must prepare for parts and service ... It is very difficult for car dealers to handle trucks. We will have to set up separate dealerships."

Nissan isn't the only Japanese company that is looking at the U. S. as a potential market for heavy trucks. Isuzu recently showed a 110,000 GCW tractor (not for U. S. use) at American Trucking Associations' Truck '84 show "to get Isuzu associated as a heavy-duty truck maker."

Isuzu also introduced a Group 3 commercial truck at the ATA show and already sells medium duty trucks here through General Motors.

John D. Rock, manager of GMC Truck and Coach operation, noted during a press conference at the ATA convention (which ran concurrently with the show), that GM does not have exclusive rights to market Isuzu trucks.

He said, "All we've done is make a deal with Isuzu to buy a truck at a spec and a price."

Isuzu and Hino, he pointed out, are vying for the commercial truck lead in the Pacific Basin.

Hino, which is part of the Toyota group, already sells a medium truck in the Southeastern U.S.

Rock, who was previously executive director of marketing for General Motors Holden's Ltd. in Australia, where Japanese commercial trucks have been present for some time, said "Mitsubishi, Nissan and Mazda are on the way in Class 3 through 7. They could go to Class 8."

In terms of numbers, the U. S. represents an attractive opportunity for foreign truck builders. Rock predicted U. S. sales of all medium-duty trucks could reach some 140,000 and heavy-duty deliveries 145,000 in 1985.

Foreign truck manufacturers, however, have yet to gain significant market share (with foreign built trucks) in the U. S. industry. □

Labor's a mixed bag from nation to nation

Japan encounters many different national traditions and practices

As they spread their manufacturing wings globally, Japanese auto companies are encountering a variety of labor traditions and practices from country to country.

In Japan, Korea and the Republic of China, usually a single union organizes both blue and white-collar workers of a company. In Spain, Portugal and some other countries, a number of different unions, often at odds with one another, struggle for power. In New Zealand, some 10 unions in different trades are involved in organization automotive workers.

Recently, the Secretariat of the International Metalworkers Federation, headquartered in Geneva, Switzerland, questioned IMF affiliates about auto companies, union organizations, collective bargaining, wages and working conditions around the world. Included in the survey were five Japanese parent companies—Nissan Motor Co. Ltd., Toyota Motor Corp., Mazda Motor Corp., Honda Motor Co. Ltd., and Mitsubishi Motors Corp.

Wages in 1983 ranged from $1.03 an hour at Nissan Peru to $9.60 an hour in the U.S.

With exception of Japan, it was found wages are determined according to the job level of workers.

In Japan, wages are set by a mixture of elements, although length of service still occupies the most important place.

A considerable amount of bonus (five or six months of wages, considered as basic pay) is paid in Japan, Korea and the Republic of China. A level of nominal wages in 1983 varied greatly from the highest of $9.60 per hour at Honda and Nissan in the U.S. to the lowest of $1.03 per hour at Nissan del Peru.

Hourly wages of Japanese domestic companies range from $8.14 to $7.38, while those in New Zealand are around $4 and in Spain $3.50. Wages in Korean and Taiwanese operations are between one-fourth and one-fifth of the highest U.S. ones, while Peruvian and Mexican wages are from 10 to 15 percent of American earnings.

Overtime premium rates range from the lowest of 30 to 40 percent in Japanese domestic companies to the highest of 100 to 200 percent at Nissan Mexicana.

Staged premium rates according to number of hours worked are set in subsidiaries in Mexico, New Zealand, Portugal and the U.S. Premium rates for work on holidays range from the lowest of 35 to 58.7 percent in Japanese parent companies and Yue Loong Motor to 100 to 250 percent in the rest of the operations.

On a contract basis, eight hours per day or 40 hours per week are common except in Mexico and Portugal where contracts provide nine hours daily or 45 hours weekly, and Korea and the Republic of China where six-day work weeks of eight-hours a day. (48 hours weekly) still exist.

On a yearly basis, contracts provide 2,368 hours as the maximum for workers in Yue Loong Motor, with 1,826 hours in Motor Iberica at the low end.

Actual working hours present a different picture. On a weekly basis, American and Peruvian workers work 35 hours as the minimum, with Korean workers at Kia Industry in service 60 hours.

On a yearly basis the number of hours worked by the U.S. employes is the least — 1,736 hours; workers in a number of companies work over 2,000 hours, the longest being Kia workers — 2,910 hours, which is nearly 70 percent more than U.S. workers.

• Labor-management joint consultation system is widely adopted in Japanese companies. The system at Toyota is typical. At Toyota, discussion items vary according to the needs of the different levels of union-company structure (company, branch/plant, shop). Meetings are held three times yearly at company level, four times at branch level, and monthly at the shop level.

Meetings involve the highest responsible persons from both sides at each different level. This indicates the union seems to be well informed on the company's overall strategy and has the opportunity for input on all subjects at different levels.

Korea is a country where the labor-management joint consultation system is compulsory. In other countries discussions generally are held within the framework of collective bargaining.

Union dues of most unions range between one and two percent of basic wages with the highest being 1.85 percent of earnings in Japanese unions, and the lowest approximately 0.3 percent in Taiwan. Dues generally are collected through the check-off system.

In determining union representation at plant level, generally, a shop steward is elected at each workshop section, the smallest unit of work organization, which forms the basis of union representation at plant level.

One steward for 40 to 60 workers is most common. According to IMF information, the New Zealand engineering union at Mazda has the highest proportion—one steward for four workers.

Collective bargaining of the Japanese companies at the national level is held only in Portugal; elsewhere it is at the company or plant level.

Participants in collective bargaining varies by country. The union team generally is composed of fulltime national or international officers. Senior shop stewards also are involved when bargaining is held at the plant level. In some cases, appointees chosen by the union play an important role in the bargaining.

The bargaining team of management is represented by top corporate personnel including the industrial relations director and personnel director. A crucial role is played by company advisors in some areas.

Union priorities are very traditional. Major subjects of negotiation tables are wages and bonus, hours, benefits, health and safety, and redundancy.

Generally, wages are negotiated every year, while duration of contract for other items is one to three years. □

Hourly Basic Wages at Parent and Subsidiaries of Japanese Auto Multinationals (1983)

(Unit: U.S. dollars)

Country	Company	Skill Category	Hourly Basic Wages
U.S.	Nissan Motor Corp.	Semi-skilled	$9.60
U.S.	Honda of America	Semi-skilled	9.60
Japan	Mazda Motor	Average	8.14*

LANDMARK DATES FOR NISSAN

April 17, 1980	Nissan Motor Co. Ltd. announces decision to establish U.S. manufacturing venture.
August 1, 1980	Marvin T. Runyon hired as president and chief executive officer.
October 30, 1980	Site in Smyrna, Tenn., selected.
January 19, 1981	Hoover Universal Inc. announced as first U.S. parts supplier.
February 3, 1981	Groundbreaking for facility.
July 6, 1981	First steel erected for 3.4 million square-foot facility.
October 16, 1981	First group of technicians leave for training in Japan.
February 22, 1982	$4 million training center opens.
April 23, 1982	First piece of equipment installed.
December 1, 1982	Employes complete first million safe-work hours.
January 10, 1983-February 27, 1983	Phase I—27 trucks are built to train employes and equipment check.
March 10, 1983-May 20, 1983	Phase II—60 trucks are built for further refinement of training and equipment calibration.
June 16, 1983	Job I, first truck for U.S. market completed.
October 21, 1983	Dedication and grand opening.
May 11, 1984	Announcement that Sentra passenger cars as well as trucks will be built at Smyrna beginning in April 1985.

Nissan

Continued from Page E-26

system and broadcasting systems are being modified and upgraded to accommodate both cars and trucks in the same system. We're also working to modify material handling systems and inspection equipment to accommodate the car lines.

How much local sourcing of components is planned?

Our local sourcing for the Sentra will initially be limited to those parts which we're already using for the trucks, such as tires, batteries, labels, bulk material, and those which do not require long lead time. We've awarded business for over $140 million in parts and components to 88 U.S. companies located in 21 states, and we hope to do Sentra business with as many of these as possible. We'll be searching for new U.S. sources for the Sentra as well as the truck, and we'll buy additional local parts as quickly as we find U.S. suppliers who can meet our criteria for quality, cost and delivery.

How many new employes will be required at Smyrna?

In order to accommodate passenger car production, we'll be increasing our employe body from a current level of 1,900 to around 3,000. Training for both new and current personnel will again be a very high priority, and many of the successful elements of our truck training program are being repeated.

What are the specifics of the training program?

We're continuing our cooperative venture with the state of Tennessee to offer a pre-employment training program for candidates for jobs at Nissan. This program offers potential employes a multi-skills training program, and all applicants for plant employment must complete this training conducted by state personnel on their own time, and without compensation. Pre-employment is conducted evenings, or on weekends, and lasts at least six weeks. During this time the candidates receive from 60 to 360 hours of training in welding, machine shop, hydraulics, pneumatics, electrical and electronics.

Will trainees be sent to Japan for instruction?

For our truck launch we sent almost 400 supervisory personnel and technicians to various Nissan plants in Japan to get hands-on experience for periods ranging from six to 40 weeks. Since we now have a facility to train in and are in production, such extensive overseas training will not be necessary. However, we do plan to send around 90 employes to Japan in the next two years as part of our Sentra training and engineering coordination. We'll also have about 50 employes of Nissan from Japan with us for various periods over the next three years to assist with the launch of the Sentra.

Why was the Sentra chosen to be produced at Smyrna?

I think our chances for success are increased significantly by our choice of passenger car model. The Sentra is one of the most popular car models in the world. Last year Nissan produced over 556,000, and over 214,000 were sold in the U.S. It is the top selling import car in this country, and Nissan dealers tell me they can't begin to meet the current demand for Sentras because of the import quotas. □

Japan's six-month exports

By region	6 mos., 1984	Share of total	6 mos., 1983	Change on '83
South-East Asia	289,361	9.6	259,361	+ 11.4

Total	3,020,028	100.0	2,873,636	+ 5.1

Most exports in three years

Japanese production hits record level

Japanese vehicle exports in the first half of this year were at their highest level since the record year of 1961. At 3,020,028, they were up 5.1 percent over the same period of 1983, but were still short of the 3.19 million achieved in the first six months of 1981.

However, Japanese production levels this year are at a record high. At the end of June a total of 5,792,072 vehicles had been manufactured, a 3.8 percent improvement over the equivalent period last year.

Furthermore, the numbers are higher than those for the opening half-years of 1980-81, when the country went on each year to build in excess of 11 million units. Following the record 11.18 million of 1981, output dipped and has been climbing steadily back since then.

These high volumes are being bolstered by strong domestic demand. In the first six months of this year Japanese registrations of all vehicles rose by 5.5 percent to 2,789,154. And yet last year turned out to be an all-time high for Japanese vehicle consumption, with more than 5.38 million registrations in total.

On the export front, a drop of more than 30 percent in shipments to the Middle East was Japan's major concern. This was on account of a substantial decline in exports to Saudi Arabia, one of Japan's key markets behind the United States. Exports to Israel and Syria fell sharply too.

While Saudi Arabia dropped from No. 2 to fifth in the export league table, it was replaced by West Germany. The German increase—more than 45,000 units—was the main reason for the increase in shipments to Europe as a whole. □

Is everyone else asking too much? Or are we asking too little?

At Subaru, we truly believe in giving you the most car for the least amount of money.

The Subaru version of more car.

Some automakers talk about leg and shoulder room. Some talk about rack and pinion steering or front wheel drive. Others talk about durability and reliability.

Yet all that and more can be had in a Subaru Hatchback for a mere $4,989.*

And that's just the beginning.

We've proven that advanced cars don't have to be expensive cars.

Standard on every Subaru is front wheel drive for improved road holding. And only Subaru has a full line of vehicles that can go from front to "On Demand"™ Four Wheel Drive. We also offer Turbo-Traction™ — a combination of fuel injected turbo charging, "On Demand" Four Wheel Drive and automatic transmission. Both are innovations we pioneered.

At Subaru, being a pioneer in technology means we've discovered new ways to give you more for your money.

You save a lot when you buy a Subaru. And a lot more when you drive it.

Every Subaru — (Our practical Hatchback, family size Wagon, sporty Two Door Hardtop, open back Brat, even our luxury Four Door Sedan) is designed to meet the demands of the economy as well as it meets the demands of the road. The engineering that goes into a Subaru, and the high mileage** you get out of one, make it inexpensive to own. And drive.

What's more, many dealers also offer Subaru Added Security. It's the only extended service contract backed directly by Subaru.

So think about it. Is Subaru offering too much for the money? Or is everyone else offering too little?

SUBARU.
Inexpensive. And built to stay that way.

Seatbelts save lives.

*Suggested retail price for our STD Hatchback. Dealer's actual price may vary. Price does not include dealer prep, inland transportation, taxes, license, and title fees. Certain items shown optional at extra cost.

**34 EPA EST. MPG. 46 EPA EST. HWY. 2WD. EPA estimate for our STD Hatchback. Use EST. MPG for comparisons. Your actual mileage will probably be less.

Safety sense

Bridgestone makes it

TOKYO. — Bridgestone Corp., producer of tires and rubber products, has developed what it calls "a hypersensitive safety sensor utilizing a new high pressure conductive rubber."

The sensor, which is said to be constructed to react faster than switches currently available, has a wide range of industrial, commercial and transportation safety applications.

The safety sensor is composed of silicon rubber with a nickel corpuscle core. When pressure is applied to the sensor the corpuscles merge together quickly allowing for the flow of electricity.

Flexibility of the sensor is achieved through the use of a pliable raw casing material, said to result in easy installation of the switch. A prototype sensor reportedly was tested more than 10 million times to ensure durability.

Moreover, the sensor is said to be heat resistant, oil resistant, waterproof and able to withstand severe temperature changes. The sensor can be cut to any length, which allows for positioning in difficult locations.

Many applications are anticipated for the safety sensor. It can be used as an emergency stop in elevators and electric doors, or as a contact alarm on car and truck bumpers. By attaching the safety sensor to doors, windows and balconies the product can function as a burglar alarm. Similarly, it can be used as a warning device in automated factories. This sensor can also be attached to road surfaces and stairway entrances to count vehicles and people. □

in the future in spite of the fact that the first-quarter results ended Fleetwood's string of six consecutive quarters of record sales and earnings.

Joseph J. Morris, Champion president, said second-quarter sales and revenues amounted to a record $99.7 million, up 8 percent from last year's $92.5 million. Net profits totaled $2.9 million, up 32 percent over the year-ago $2.2 million.

He noted that gains in manufactured housing were mainly responsible for the strong second-quarter performance, but said "our motor-home, bus and van-conversion business also showed substantial sales and profit improvement."

"Although the motor-home market is softening," Morris added, "we expect our two motor-home plants as well as our one bus plant to remain profitable in our current third quarter."

Factory shipments of these vehicles, he said, were up 6 percent to 477 units, compared with 448 a year ago.

Dan Pocapalia, KIT chairman, said third-quarter earnings amounted to $244,000, compared with $64,000 a year ago, and included a $112,000 tax credit.

Three-month sales totaled approximately $12.6 million, down from last year's $14.4 million.

Anticipating shortages from Canada strike

GM scraps Saturday car work

By Louise Kertesz
Detroit Reporter

Last week's estimated auto production total may prove optimistic, since the Canadian strike could have resulted in component shortages and slowdowns at several General Motors plants in the U. S.

Anticipated shortages were the likely reason GM scheduled no Saturday overtime at any of its car assembly plants — for the first time since August.

Makers targeted assembly of 159,970 cars last week, down 1.01 percent from the previous week's 161,605, though the Big Three all expected gains.

The dip was the result of American Motors' halting production of Alliance and Encore at Kenosha (for the second week this month), which cut about 4,800 units from the production total.

Last week's estimated production was off 0.40 percent from the year-ago week's 160,-611.

So far this year, 6,376,382 cars have been completed in the U. S., an increase of 18.80 percent over the 5,367,281 assembled last year at this time.

Companies shared last week's production as follows: GM, 53.75 percent; Ford Motor Co., 25.88 percent; Chrysler Corp., 17.88 percent; Honda, 1.86 percent, and Volkswagen of America, 0.63 percent.

Ford scheduled Saturday (Oct. 20) overtime at its Kansas City, Edison (N. J.) and Wixom (Mich.) plants.

Chrysler plants in Belvidere (Ill.), Newark (Del.) and St. Louis (Nos. 1 and 2) worked two nine-hour daily shifts last week. The Jefferson Ave (Detroit) plant worked two 8½-hour daily shifts.

Ford and L-M offering incentives on small cars

By Joseph Bohn
Marketing Editor

Ford and Lincoln-Mercury kicked off new incentive programs on their small cars.

The Ford Division program is called "Once in a Lifetime." It runs from Oct. 13 to Dec. 12. There is a fast-start provision for extra credit during the first 30 days and also a special emphasis bonus on Escort.

The contest sets up dealer objectives based on '84/'85 Escort, Tempo and EXP sales.

The 700 largest Ford dealers compete one on one for ladies Rolex watches with a retail value of $5,500. Some 350 winners are projected in this group. There is a $100 entry fee for these dealers.

The balance of Ford dealers compete in multi-group competitions for 350 more watches being awarded. Those dealers pay a $50 entry fee.

Additionally, two winners in each region—a total of 10 altogether — who have the best overall volume receive ladies Rolex watches, or chronometers, with 40 diamonds and a bracelet, valued at $12,000 retail.

Lincoln-Mercury has a Sept. 13 to Nov. 26 program, called "Holiday Wrap-Up," for sales managers.

It sets up objectives on '84/'85 Lynx and Topaz sales. There is a Sept. 13-Oct. 23 fast-start that provides 10 extra percentage points toward the overall contest objective.

Dealerships are grouped into one of three categories. There will be 200 winners among the largest L-M dealers who'll win $3,000 worth of prizes each.

Sales managers in this group who achieve 100 percent of their objectives will be flown, along with a companion, to Dallas on Dec. 17 for a shopping spree at Neiman Marcus to select their gifts.

Those who don't hit the 100 percent will get the same gifts but not the trip. They pick prizes form a catalog.

A second tier of supervised dealerships compete for $1,000 worth of gifts. There are 100 winners projected for this group. A third group is comprised of unsupervised, or dual dealers. Some 100 winners are projected for this group and they also receive $1,000 worth of gifts.

There are no entry fees in L-M's contest.

Car-truck output dips in Canada as strike shuts GM

The strike against General Motors slashed estimated car and truck production in Canada last week to mid-September levels.

Last week's targeted output of 18,175 cars, the lowest since the week ended Sept. 15 (15,-995), was 2.13 percent below the 18,570 built the previous week and down 8.76 percent from the year-ago week's 19,919.

So far this year, 853,568 cars have been built in Canada, 11.07 percent more than the 768,503 assembled at this point last year.

Slated assembly of 14,040 trucks last week, the lowest since the week ended Sept. 8 (14,509), was down 18.18 percent from the previous week's 17,160 but 8.25 percent better than the year-ago week's 12,-970.

Last week's expected production at Chrysler's Windsor (Ont.) plant was: 2,346 Plymouth Voyagers, 2,352 Dodge Caravans and 942 Mini Ram Vans. The total T-115s assembled this year is now 185,406.

Expectations high for truck output; 67,199 scheduled

Before the Canadian strike against General Motors last week, domestic truck makers were again expecting their best week of the year: 67,199 units. However, the effects of the strike were likely to erode that figure.

Makers had expected the previous week to be the best so far this year, but actual production of 63,312 fell almost 4,000 units short of the projection and 3,522 short of the year's high of 66,834 trucks built during the week ended June 23.

Targeted output of 67,199 last week was up 6.14 percent from the previous week's 63,312 and up 20.37 percent from the year-ago week's 55,826.

Year-to-date, 2,529,227 trucks have been assembled, 32.79 percent more than the 1,904,687 completed at this point last year.

GM scheduled two overtime shifts Saturday (Oct. 20) at its Pontiac facility (No. 6).

Ford Motor Co. also scheduled Saturday overtime at its plant in Lorain O.

Chrysler Corp.'s plant in Warren, Mich., worked two nine-hour daily shifts last week.

Canada strike affects 27 GM plants in U.S.; talks continue

By Marjorie Sorge
Labor Editor

The UAW and General Motors of Canada were "cautiously optimistic" at presstime that a new agreement could be reached quickly, ending a 10-day walkout by 36,800 GM workers.

The strike, which is costing GM about $100 million a week, forced the layoff of another 35,190 workers at nine assembly and 18 component plants in the U. S. because of parts shortages caused by the walkout.

If the strike should continue, the layoff total will climb and some sources predicted that two-thirds of the 350,000 UAW-represented GM workers would be off the job this week.

GM suppliers would also be hit. According to one union source, between 300,000 and 400,000 workers at GM and supplier companies could be off the job.

Once a settlement is reached, it will take another week to get the workers back on the job. They will not return to the plants until the pact is ratified. A meeting of the GM Council will be scheduled a couple of days after the agreement is reached. Then, membership meetings will be held to explain the new contract.

The UAW and GM had been deadlocked in talks until last Wednesday (Oct. 25) when UAW Vice President Robert White said the two sides "produced a format that unlocks the doors." The formula is economic and provided some manner of reaching a wage settlement.

A GM spokesman said the company wants to get a settlement as quickly as possible and is "optimistic."

The UAW has said it wants to recover the annual improvement factor (AIF) that was given up in 1982 bargaining and will not agree to divert cost-of-living-adjustment (COLA) pennies to the company.

The GM-UAW agreement in the U. S. does not return the AIF and diverts 13 cents in COLA to help pay for some benefits. In the initial proposal from GM in Canada to the UAW, the company asked for a 22-cent COLA diversion.

• The Canadian UAW also wants more time off the job either in a shorter workweek or the return of nine paid personal holidays (PPH) days a year. The U. S. workers were

Aerodynamic 6000 STE for 1986

Unofficial photo of the 1986 Pontiac 6000 STE shows a more pronounced wedge shape and a more aerodynamic front end, featuring European-style headlamps instead of the six square lamps on the '85 model. Turn signals have been moved from the bumper to grille.

breaking news

DOT seeks ad agency for belt campaign

WASHINGTON.—DOT is looking for an ad agency to coordinate its four-year, $80 million nationwide seat-belt-use campaign. U. S. makers and importers, as well as other companies and organizations, are expected to contribute a like amount. DOT is expected to make its selection by Nov. 15.

Antitheft law singles out some models

WASHINGTON.—President Reagan has signed legislation that will require makers of cars in a "high-theft" category to put vehicle identification numbers on at least 11 more major parts. Currently, VINs are required only on the engine block, transmission housing and instrument panel.

Court throws out clean-air offsets

WASHINGTON.—The U. S. Court of Appeals here has thrown out a novel EPA policy that permitted makers, on a case-by-case basis, to promise to build cars with emission levels below established standards in order to compensate for current models not meeting standards. EPA used the offset policy to deal with about 700,000 '79-model GM cars which were exceeding the NOx standard. GM offset those with about 2.3 million 1982-1983-model cars certified at 0.1 gram per mile below the standard.

Volvo prepares to go Dutch in U. S. in 1986

HELMOND, Netherlands. — Andre Deleye, chairman of Volvo Car here, was a recent visitor to Washington. He was preparing the groundwork for the launch in the U. S. in the final quarter of 1986 of the new generation Dutch-built Volvo.

15 DeLorean aides sued in bankruptcy; $200 million asked

By Michelle Krebs
and Edward Lapham

Fifteen former officers and directors of DeLorean Motor Co. have been sued in U. S. Bankruptcy Court in Detroit for more than $200 million in damages for alleged fraud and mismanagement of the defunct car company.

In New York, a lawsuit seeking $150 million from Arthur Andersen & Co., the auditing firm for DMC, also was filed. The suit alleges fraud and malpractice.

Both suits were filed by David W. Allard Jr., trustee for DMC in the bankruptcy proceedings.

The Detroit suit seeks more than $100 million in exemplary damages and $100 million in punitive damages.

The Detroit suit charges the group with "blatant and unbridled mismanagement" as well as being involved in or, at least, failing to prevent "fraudulent schemes to divert and convert assets" of the company for their personal gain and/or that of John Z. DeLorean.

DeLorean, himself, was not named in the suit since he has already been named in similar actions.

The suit accuses the group of allowing DeLorean to comingle $15 million of corporate funds in his personal bank accounts in his attempts to "loot" the company.

It also claims the group played a part in converting or losing the nearly $18 million allocated for research and development of the DeLorean automobile, which vanished into a European bank maze.

The suit alleges the directors and officers allowed corporate funds to be used for such personal items as the upkeep of DeLorean's plush Park Ave. offices in New York at a cost of more than $10 million a year and the promotion of his wife's modeling career, including marketing a line of sunglasses and perfumes under her name.

DeLorean's wife, Cristina Ferrrare, who has filed for divorce, was named in the lawsuit as she was a DMC director.

Corporate funds also were inappropriately used for, among other things, the development of plans to acquire Chrysler Corp., the suit said.

• Named in the Detroit suit are Robert Weld Benjamin, a DMC director; Henry I. Bushkin, a DMC director and California attorney representing celebrity Johnny Carson's interest in DMC; Mary Jacqueline Feddock, DMC's assistant secretary; Robert S. Gay, a director, and Roy S. Nesseth, a director and an officer.

Also: Dennis A. Patouhas, controller; Joseph H. Penrose, vice president; James H. Season, a director and assistant treasurer; Edward L. Smith, a director and president of Composite Technology Corp., a DMC subsidiary, and James G. Stark, a director.

Also: Richard C. Swanson, a director, and his firm, Swanson Insurance Agency, the insurance agent of DMC; Thomas W. Kimmerly, a Bloomfield Hills (Mich.) attorney and certified public accountant and DMC director, as well as his partner, Ted M. Gans and business associate Mary A. Thoman, a certified public accountant.

Also named in the suit were Midland Insurance Co. and Scarborough & Co., a division of Ryan Services Corp. The companies allegedly sold liability insurance covering the officers and directors.

The trustee contends the unsecured creditors have been placed in a perilous position by the companies, which refuse to confirm such policies exist, because under Michigan law, they lose the right to collect on the insurance if the action does not

Young talent promoted; product cycle shortened

Reuss details operations of GM 'supergroup'

By Richard Johnson
Detroit Reporter

General Motors' Chevrolet-Pontiac-GM of Canada (CPC) "supergroup" will be "structurally in place" by the end of the year, according to CPC group executive Lloyd Reuss, who laid out details of the ongoing reorganization to the Detroit Auto Writers Group.

The former Buick general manager, who was named to head one of the corporation's two car groups, outlined a shortened chain of command at CPC and cited leapfrogging of talented young managers to key positions within the group.

He said the new structure is geared in large part to reducing the product development cycle from five years to three, and increasing GM's share of the entry-level buyer market. CPC is also placing broad emphasis on how CPC compares with international competition.

Reuss said an important decision to be made at CPC within the next two years is how to compete for the post-baby-boom car-buying segment. He said the various GM car platforms were aligned within the two supergroups not on the basis of car size, but with an eye to markets targeted by CPC and Buick-Oldsmobile-Cadillac in the future.

During the luncheon, Reuss also said:

1. The group recently received approval for a major technical upgrading of two existing engines for the 1987 model year.

2. Sourcing of the 1988 GM10 program is nearly 80 percent completed, representing the earliest such assemblage of component suppliers on a new product.

3. The much-touted Saturn small-car project will move into the CPC group by the end of the year. The most important aspect of the Saturn project will be application of manufacturing advances derived from the program before the car itself hits the market.

4. GM considered building a fiberglass-bodied, front-drive minivan vehicle in the late 1970s, but decided there would

Mullane vows second front in subsidy war

By John A. Russell
New York Staff Writer

HACKENSACK, N. J.—A second tactic to stop fleet subsidies through state legislation is developing among dealers since federal action has been brought to a halt in this Congress.

Ed Mullane, president of the Ford Dealers Alliance (FDA), said recently that "in addition to pressing forward again (the federal bill has to be reintroduced next year) in Washington, we will open a second front in the state capitals and seek state legislation to end fleet subsidies."

Mullane told AUTOMOTIVE NEWS that several Eastern dealers held a meeting with W. L. McCulloh, an Oklahoma dealer; Ed Perry, president of the Oklahoma Automobile Dealers Assn., and John Conner, the association's executive vice president.

They outlined to the Eastern state representatives the features of their bill which the association attempted to have passed in Oklahoma earlier this year.

The Oklahoma bill would require manufacturers to sell to dealers in the state at the lowest price the company charges any purchaser in any U. S. state.

• The bill was defeated after a massive lobbying effort by General Motors.

But, Mullane said, Oklahoma dealers intend to introduce the bill again next year, and the FDA president wants other state associations to push for similar state laws.

If several states controlling major markets managed to enact this type of legislation, subsidies would be stopped, he said.

Mullane was realistic about the chances for the federal bill, H.R. 5305. "Unless this Congress goes back into a lame duck session, which is highly unlikely, the bill will not pass this this year," he said.

He laid the blame for stopping the legislation on Rep. John Dingell, Michigan Democrat and chairman of the House Energy and Commerce Committee.

NHTSA adopts test

WASHINGTON. — NHTSA has adopted an equivalency test to gauge the ability of different seat-belt materials, such as nylon and polyester webbing, to hold up under exposure to light.

A Tiger from China

The Chinese-built Beijing Tiger 212, which a U. S. import company hopes to market in this country, will be on display at the South Florida Auto Show Oct. 27-Nov. 4 at the Miami Beach Convention Center. The four-wheel-drive, five-passenger utility vehicle is powered by a four-cylinder, 2.4-liter engine.

But AMC may oppose their import

Chinese 4WDs being tested in U. S.

By Richard Johnson
Detroit Reporter

Four Beijing "Tiger 212" vehicles have been brought into the U. S. for government certification testing by an import company which hopes to market the Chinese-built, four-wheel-drive utility vehicles in this country.

But the importer, China Trade Associates, may run into opposition from American Motors, partner of Beijing Automotive Works in a joint Jeep production venture in the People's Republic of China.

A four-door, five-passenger canvas top "Tiger 212" — the same vehicle being produced by Beijing Jeep Corp. under the name BJ212 — will be on display later this month at the South Florida Auto Show in Miami Beach. The "Tiger" name was picked for the U. S. market by the import company.

Mike Bassichas, an import dealer in Hollywood, Fla., and a principal in China Trade Associates, said the group is not yet actively soliciting dealers. But if all goes well, the organization hopes to set up a sales network soon and import as many as 5,000 Tiger 212s a year beginning in early 1985.

The group will survey dealer response at the auto show, which runs from Oct. 27 through Nov. 4 at the Miami Beach Convention Center. Testing will be conducted at the EPA emission laboratories in Ann Arbor, Mich.

Bassichas said he hopes safety and emissions testing will be completed within 90 days, and that whatever modifications are necessary will not dissuade Beijing Automotive Works from participating in the project.

"We have an agreement with them subject to certification," he said. "But they don't want to export something they have to do too much work on."

• The vehicles arrived about a month ago at the port in Tampa, according to Bassichas, who said 15 to 20 dealers have either signed on or expressed an interest in retailing the Tiger 212. The dealerships are in Florida, Texas, California and New Jersey.

He said the group will seek to round up dealers once certification testing is completed and final terms are worked out with Beijing Automotive Works. Bassichas said he does not expect the vehicle, which is powered by a four-cylinder, 2.4-liter engine, to require many alterations for the U. S. market.

"It is a pretty straightforward unit that doesn't need that much," he said. "It may need some emission control items, some small modifications, but nothing horrendous. They (Beijing) have the wherewithal to make the modifications we want, but it will depend on whether it is economically suitable for them."

While China Trade Associates could make some small adjustments once Tigers are shipped to the U. S., he said the group prefers to have them made certifiable on the assembly line in China.

"We'll start looking for dealers as soon as we put our deal together with the factory ... we know exactly what ... getting and how much it costs," Bassichas said.

He said the import company hopes to sell the vehicles in the U. S. for about $6,500 — well below the price of Jeep products and other four-wheel-drive entries in the U. S. market.

He said the Tiger, which has both two- and four-wheel-drive capability, is strictly a utility vehicle. It has been pegged as ideal for sportsmen and for a variety of commercial functions, such as moving, construction, oil and logging company workers over rough terrain.

"It isn't as crude as a VW Thing, but it's not a Jeep Cherokee," Bassichas said. "For what it is, it is a very good buy."

A spokesman for American Motors, which established a manufacturing partnership with Beijing Automotive Works last year, said the Tiger 212 is the same vehicle being produced by the joint venture.

But he said AMC has no involvement with the import project and has no plans to bring Chinese-built products into the U. S. market.

"We're upgrading that vehicle now, but basically it is the same vehicle," he said.

Meanwhile, Beijing Jeep is working on a new generation Jeep model to be introduced in about three years for the Far East market.

Asked if AMC would object should the group begin importing 5,000 BJ212s a year, the spokesman said, "I suspect we would." However, he did not outline what steps the corporation might take.

Bassichas said he is not familiar with details of AMC's involvement with Beijing Automotive Works. But he said he did not see a conflict with China Trade Associates' plans.

"They (AMC) don't seem to have any interest in what we're doing," he said. "I think we're two horses of a different color."

Born-again Ferraris

Geneva-based William Favre has begun production of a series of 25 exact replicas of the 1962 Ferrari GTO, left, and three replicas of the 1957 Testarossa, right. These two all-aluminum models are being built in Italy, the GTO on original Ferrari chassis and the Testarossa on chassis based on factory designs. Engines are V-12s from Ferrari 250 GTEs of the 1960s, rebuilt to deliver 280 HP. Five firm orders have been taken for the cars, which cost about $135,000.

Buffeted by strikes and layoffs

Mid-month car sales trail year-ago totals

By Jenny L. King
Staff Writer

Tripped by scattered UAW strikes and forced layoffs at General Motors, the domestic auto makers' October pace slackened in the race to return sales to the heights reached in the '70s.

New-car sales were off for only the fourth time in the 29 reporting periods of the current calendar year, with Oct. 11-20 results 6.47 percent behind the preceding year's total.

General Motors, which habitually captures 55 to 64 percent of the domestic market, dropped 15.90 percent in sales and several percentage points in market share.

Ford Motor Co. and Chrysler Corp. showed gains for the period but could not overcome the GM dip.

Domestic sales for mid-October were down to 220,112 from 235,334 last year. GM, with inventories squeezed by strikes and layoffs, was down 15.90 percent, to 120,566 from 143,368. Ford raised its total 9.98 percent, to 61,211 from 55,658, and Chrysler was up 8.10 percent, to 29,377 from 27,175.

American Motors released a sales estimate of 4,175 for mid-October, down 13.02 percent from its year-ago 4,800 estimate. Volkswagen was off 56.25 percent, to 1,123 from 2,567, while Honda doubled its total, to 3,660 from 1,766.

• GM's share of the domestic market plunged to 54.77 percent from 60.92 percent. Ford climbed to 27.81 percent from 23.65 percent. Chrysler was up to 13.35 percent from 11.55 percent. AMC slipped below the two-percent mark, to 1.90 percent from 2.04 percent. VW earned only 0.51 percent, down from 1.09 percent, and Honda was up to 1.66 percent from 0.75 percent a year earlier.

All the makes from Chrysler and Ford came out ahead during the period, and all GM's divisions fell behind. Plymouth was up 6.68 percent, Chrysler was up 8.00 percent and Dodge was up 9.25 percent.

Ford was up 7.23 percent, Mercury was up 11.92 percent and Lincoln posted a 34.24-percent sale gain.

At GM, Buick was down 15.16 percent, Cadillac was off 0.93 percent, Chevrolet slipped 7.52 percent, Oldsmobile plunged 35.67 percent and Pontiac was down 5.48 percent.

Renault sales were up an estimated 0.91 percent while AMC dropped 68.75 percent.

With nine selling days in the mid-month period both this year and last, the daily rate was down 6.47 percent, to 24,457 from 26,148.

Year-to-date domestic sales reached 6,545,494, up 21.02 percent from 5,408,459 in 1983.

From O'Gara Coachworks

O'Gara Coachworks, Simi Valley, Calif., designs the Windsor Series. Included in this series of Cadillac Sedan DeVille limousines is the Moritz, above. The car has an extended wheelbase of 46 inches, upgraded and tuned heavy-duty suspension, auxiliary radiator cooling fan, heavier gauge steel for floor and side members, added crossmember and an added center driveshaft carrier bearing.

Offsetting GM dip in early October

Ford, Chrysler lead sales surge

By Jenny L. King
Staff Writer

Booming Ford Motor Co. sales and healthy returns from Chrysler Corp. more than compensated for General Motors' decline as the early-October passenger-car total climbed 17.10 percent above the 1983 sum.

Honda tripled its year-ago 10-day total, American Motors duplicated its figure and Volkswagen was down 6.74 percent. U. S. new-car sales for Oct. 1-10 were 224,792 this year compared with 191,965 in 1983.

Given one more selling day this year — nine compared with eight — the daily selling rate of 24,977 was up 4.09 percent from 23,996.

Year-to-date sales were up 22.27 percent, to 6,325,382 from 5,173,125.

Ford Motor Co. reported a sales gain of 65.68 percent based on this year's 64,192 units compared with the year-ago 38,745. Chrysler Corp. was up 37.09 percent, to 27,574 from 20,114. General Motors slipped 1.81 percent, to 125,121 from 127,428, its fortunes still affected by the brief UAW strike of September.

Honda jumped to 3,203 from 900, a 255.89-percent difference. AMC's estimated 3,650 sales were the same as the year-ago estimate, and VW slipped 6.74 percent, to 1,052 from 1,128.

• GM's share of the early-October domestic market dropped more than 10 percentage points, to 55.66 percent from 66.38 percent last year. Ford earned 28.56 percent, up substantially from 20.18 percent. Chrysler had 12.27 percent, up from 10.48 percent.

Honda sales accounted for 1.42 percent this year compared with 0.47 percent in 1983, its first October as a domestic car maker. AMC slipped to 1.62 percent from 1.90 percent and VW shriveled to 0.47 percent from 0.59 percent.

All the Chrysler and Ford makes were up for the period while at GM it was a mixed bag. Chevrolet moved ahead by 22.26 percent, to 40,948 from 33,492, and Pontiac was up 11.31 percent, to 19,073 from 17,135. Cadillac was down 10.32 percent, Oldsmobile was off 17.91 percent and Buick dropped 14.18 percent.

At Chrysler Corp., Plymouth was up 35.52 percent, Chrysler was up 42.40 percent and Dodge was up 33.87 percent. Ford was up 67.90 percent, Mercury was ahead of last year by 62.02 percent and Lincoln beat its year-ago total by 60.68 percent.

AMC dropped 27.27 percent and Renault was up an estimated 4.84 percent.

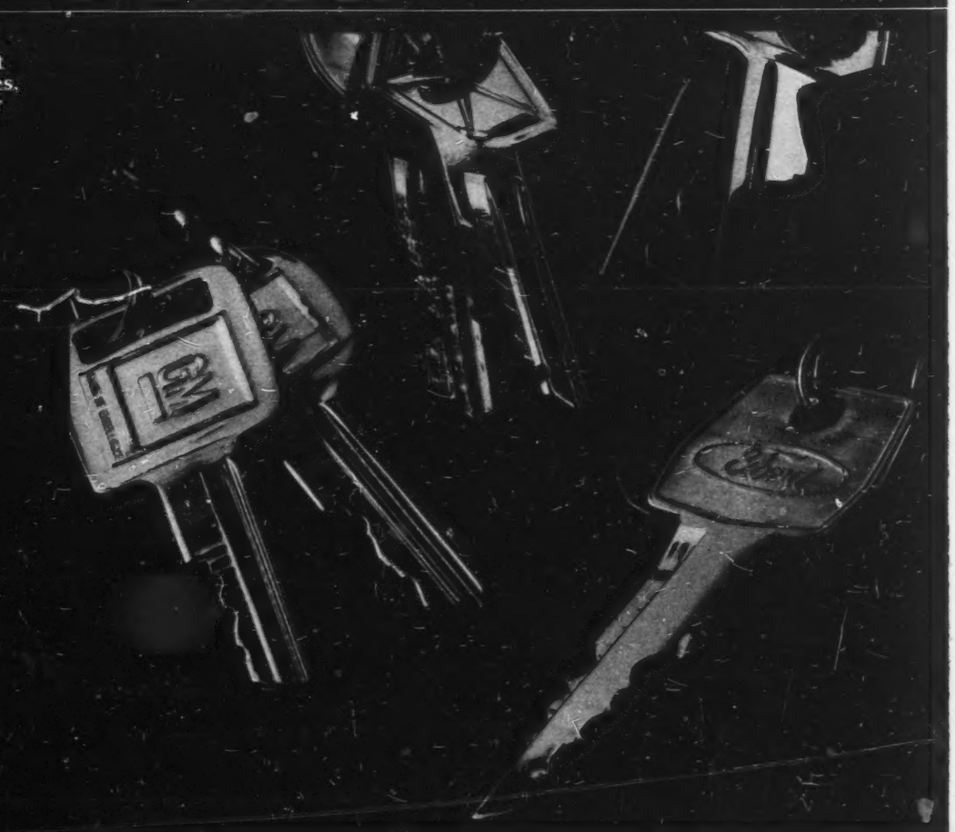
Anglo American Auto Auctions
and Hewlett-Packard proudly present:

The Elite Fleet.

Acquire the kind of quality vehicles that can mean extra sales, profit and customer satisfaction.



Anglo American Auto Auctions announces that, through an exclusive agreement, Hewlett-Packard's entire corporate fleet will be available for purchase in nationwide sales. These are Hewlett-Packard's corporate executive vehicles... conscientiously maintained according to its own strict mechanical standards. Virtually all these cars are option-upgraded with high-demand features which reflect Hewlett-Packard's high standards of excellence and most are one-driver vehicles.

All new and used car dealers can take advantage of this unique sales opportunity – Phase I begins in October with '81, '82, and '83 vehicles from Chrysler, Ford and General Motors. Phase II, beginning in November, features '84 Ford and Lincoln-Mercury cars, all with the exclusive Ford Motor Company 36-month/48,000 mile Extended Service Plan. Contact Dennis Thee today for dates, locations, and details:

Chevrolet dealer adopts kangaroo as firm's mascot

HILLSBORO, Ore.—Cal Worthington has his dog Spot, but Bruce Patchett may have done him one better with his kangaroo Skippy.

Patchett, owner of Bruce Chevrolet here, recently purchased a 7-month-old kangaroo to use as a mascot for his store.

Patchett is an Australian native who moved to the U. S. 18 years ago. He learned of dealers using mascots from a painter who specializes in painting windows at dealerships all over the country. The Chevy dealer decided that a kangaroo would be a natural.

The baby marsupial stands only a foot tall, but is expected to be about three feet tall when fully grown. Patchett plans to display the animal in his showroom and will have Skippy trained for use at the dealership and in commercials.

Patchett told a local newspaper that kangaroos can be domesticated and that they are very similar to dogs. The dealer says he plans to show Skippy as a boxer, fighting high prices.

Bleak future seen for many truck dealers

By Arthur Flax
Assistant Truck Editor

LAS VEGAS.—Some big-truck dealers have become obsolete and others face the same fate, in the opinion of Stuart S. MacKay, head of MacKay & Co., a management consulting firm.

"If 40 to 50 percent of today's truck dealers survive, that's an optimistic number," he told the recent meeting here of the Truck Body & Equipment Assn. He predicted there will be fewer dealers with greater activity in the future.

MacKay thinks that the truck dealers who survive will be those who are closest to their customers.

"They will know well the customers in their area and their needs," he said.

MacKay forecast a bleak future for most truck dealers.

Knowledge has been the truck dealer's strong point, he said, but many truck customers now are more knowledgeable than the dealers.

The manner in which trucks are ordered has changed, MacKay noted.

Today, a truck buyer can follow a "menu approach" to specifying truck components, he said, leaving price as the only point of discussion between dealer and buyer.

Trucks will become more standardized, and makers will specify components to suit certain tasks, MacKay predicted.

• In Europe, MacKay noted, all trucks are standardized, and some U.S. heavy-truck makers

ATA names Donohue president and CEO

LAS VEGAS. — Thomas J. Donohue has been named president and chief executive officer of American Trucking Assns. He succeeds Bennett C. Whitlock Jr., who served for nine years.

Donohue, 46, joined ATA in July as executive vice president and chief executive. Previously, Donohue was group vice president of development with the U. S. Chamber of Commerce.

Isuzu's 'KS' cab-chassis unit

A 3.9-liter, 87-HP four-cylinder diesel with direct fuel injection powers the Japanese-built Class 3 cab-chassis unit introduced in the U. S. by Isuzu Truck of America, Inc. It has a manual five-speed overdrive transmission and a GVW rating of 10,500 pounds.

Isuzu Truck offering Class 3 diesel in U. S.

By Jack Walsh
Truck Editor

LAS VEGAS. — A Japanese-built Class 3 truck designed specifically for city delivery applications is the first entry in the U. S. market from Isuzu Truck of America, Inc.

The KS22 is powered by a 3.9-liter, direct-injection four-cylinder diesel with a five-speed manual transmission. The truck has a wheelbase of 130 inches, is rated at 10,500 pounds GVW and can carry a 5,700-pound payload, including the weight of the body.

The company also is offering two chassis units for bus and RV applications. The LT111 is a rear-engine "pusher" model, and the MR111 is a front-engine "puller" unit.

Both chassis are powered by a 5.785-liter, direct-injection six-cylinder diesel coupled to an Allison AT545 four-speed automatic transmission. A turbocharged diesel will be available later, and a manual transmission also is offered.

The LT111 chassis features full air brakes, while the MR-111 has an air-over-hydraulic system. Power-assisted steering is standard in both models.

Steven M. Allen, Isuzu Truck general manager, said the KS-22, "unlike most Class 3 vehicles, brings a new heavy-duty truck-type construction to this market. Competing Ford and Chevy trucks are constructed on van frames that have been 'built up.'"

The KS22, he noted, has a reinforced ladder frame and reverse I-beam front suspension. He added that the vehicle is the only Class 3 truck with an engine exhaust brake, which is standard.

Other standard features include a parking brake that works independently off the driveshaft for maximum security, steel-belted radial tires and an AM/FM radio.

Allen said the market is ripe

Output of heavies at Freightliner up 100 pct. over '83

PORTLAND, Ore. — Freightliner Corp. has announced that production of its Class 8 tractors will have doubled over 1983 levels when the company's capacity expansion program is complete in early November.

Combined output at manufacturing facilities in Mt. Holly, N. C., and Burnaby, British Columbia, and Portland will approach 100 tractors a day, the highest rate in the company's history, according to Peter E. Rupp, president.

"Freightliner's record-high output comes at a time when there is a general production cutback in the industry as a whole due to softening retail sales," Rupp commented. "With our expansion project nearly complete, Freightliner's Class 8 manufacturing capacity will have increased 30 percent compared to 1983 levels.

"It positions us to serve our customers even better and to help us meet the continued strong demand for Freightliner trucks in North America," he said. He noted that Freightliner expects sales to exceed 18,000 units in 1984, and said "we could have sold additional units had we had more production capacity available this year."

Freightliner's expansion program, which was started earlier this year at a cost in excess of $10 million, increased production capacity about equally at the Mt. Holly and Portland plants. Both facilities currently operate at over 100 percent capacity on a two-shift basis.

Stahl introduces service van

Stahl's new Utility Service Van, which is distributed to dealers through 200 truck-equipment distributors throughout the U. S., has 65 percent more storage space than a conventional van, according to the Wooster (O.) truck-body manufacturer.

truck industry news

8-month total also is second-best

August registrations are highest since '78

Registrations of new trucks of all types in the U. S. in August were the highest since 1978 and they were almost 30 percent greater than those in the same month a year ago.

In August, according to R. L. Polk & Co. statistics, 329,915 units were registered, an increase of 29.9 percent over last year's 253,939. The alltime high for the month was 396,434 in 1978.

The eight-month total of 2,637,497 tallies also was the second-best in industry history, and only 11,619 units fewer than the record 2,649,116 trucks registered in 1978.

This year's January-August count was 40.5 percent higher than the 1,877,947 in 1983.

Registrations through August were up from a year ago in the three major market segments and all eight weight groups.

Light-truck tallies for the eight months totaled 2,480,488,

Table on Page 36.

a gain of 40.1 percent over last year's 1,770,224. The count also was 63,342 units greater than the 2,417,146 light trucks registered in the same period in 1978. um trucks were registered, an increase of 17.3 percent over the year-earlier 29,343. But the total was far below the 105,353 tallies six years ago, when Group

Through August, 34,430 medi-6 was a stronger classification than it is today.

Eight-month heavy-truck registrations were up 56.4 percent to 122,579 units, compared with

Continued on Page 32, Col. 4

HD registrations through August up 56.4 pct. over 1983

Registrations of new heavy trucks in the U. S. in the first eight months of 1984 totaled 122,579 units, according to R. L. Polk & Co. statistics, an increase of 56.34 percent over the year-ago 78,386 units.

In August, 16,413 vehicles were registered, a gain of 68.01 percent over the 9,765 tallied in the same month a year ago.

Registrations of Group 7 trucks through the first eight months totaled 42,553, up 34.27 percent over the 31,597 in the year earlier period.

The Group 8 count through August was 80,026, an increase of 71.16 percent over the year earlier 46,783.

No. 1 International increased its lead over Ford in August by more than 600 units and had an eight-month total of 28,069, compared with 24,551 for runner-up Ford.

International also was No. 1 in Group 8 registrations with 18,409 tallies through August, while Ford was the Group 7 leader with 16,835 units.

Market share dips nearly 3 points in July

Import penetration down for month

By Jenny L. King
Staff Writer

New imported-car registrations dropped nearly three percentage points in their share of the total U. S. market in July, compared with the same month a year ago, and their penetration for the first seven months was off 3.87 percentage points.

R. L. Polk & Co. registration figures showed July import numbers up 2.68 percent year to year, climbing to 224,103 from 218,264. But the domestics were up just over 19 percent, forcing the foreign competition to settle for a smaller piece of the total market.

Imports dropped to 24.81 percent in July, 1984, from 27.66 percent in July, 1983.

Penetration in the first seven months was down to 24.03 percent from 27.90 percent, while actual numbers were up a modest 1.00 percent, to 1,422,531 from 1,408,451.

In July, it was the European makes that triumphed among the imports. Honda was the exception to the Japanese slump, gaining 3.06 percentage points as Toyota dropped 1.29 percentage points, Nissan was down 2.04 percentage points and Mazda lost 0.23 percentage points. Subaru was up 0.21 percentage points for the month.

Volkswagen moved into fourth from sixth place among the top 10 imports and gained 1.19 percentage points. Volvo was up 0.28 percentage points, Audi was up 0.48 percentage points and BMW was up 0.21 percentage points. Mercedes dipped 0.30 percentage points, its sales greatly affected by the early-summer metalworkers' strike in Germany.

Ten imports claimed 89.75 percent of the July import market, up from 88.18 percent a year ago.

• In the first seven months of this year, the Japanese decline was more dramatic, with Toyota down 3.04 percentage points, Nissan off 2.75 percentage points, Mazda off 0.73 percentage points and Subaru down 0.15 percentage points.

Honda enjoyed a gain of 3.69 percentage points and came close to ousting Toyota from its position as top import. Polk registration figures include all U. S.-built Accords in the Honda total. In the same manner, U. S.- built Rabbits are among the VW import registrations.

VW, Volvo, Mercedes, Audi and BMW all increased their year-to-year penetration for the seven months. The top 10 makes claimed 89.85 percent of the total, up from 89.27 percent in 1983.

Japanese-built cars captured 73.08 percent of the July imports total, down from 76.72 percent a year ago. Germany was the source of 11.29 percent, up from 9.95 percent, the U. S. imports (a Polk category) climbed to 8.01 percent from 5.13 percent and Sweden was up 5.55 percent from 5.00 percent.

• Numbers of new import registrations from each country included:

	July, 1984	July, 1983
Japan	163,779	167,444
W. Germany	25,312	21,707
United States	17,944	11,203
Sweden	12,431	10,924
France	2,588	4,702
Great Britain	1,399	1,342
Italy	628	818
Ireland	22	124
TOTAL	224,103	218,264

Japan was the country of origin of 70.64 percent of the new imports in the first seven months of this year, down from 77.28 percent in 1983. West Germany claimed 13.38 percent, up from 10.20 percent, the U. S. grew to 8.10 percent from 4.47 percent and Sweden contributed 5.62 percent, up from 4.97 percent.

	7 Mos., 1984	7 Mos., 1983
Japan	1,004,930	1,088,388
W. Germany	190,291	143,716
United States	115,224	62,980
Sweden	79,879	70,034
France	18,155	27,941
Great Britain	10,310	8,791
Italy	3,499	6,132
Ireland	243	469
TOTAL	1,422,531	1,408,451

Registrations of new imported small trucks were up 57.18 percent July to July, climbing to 65,165 from 41,460. Numbers for the major importers were:

	July, 1984	July, 1983
Toyota	25,394	15,240
Nissan	17,339	12,034
Mazda	8,994	5,419
Dodge Ram 50	4,327	2,741
Others	9,111	6,026
Total	65,165	41,460

After seven months, the truck total was up 57.93 percent compared with 1983, to 408,156 from 258,438. Individual totals were as follows:

	7 Mos., 1984	7 Mos., 1983
Toyota	151,395	89,995
Nissan	115,841	68,453
Mazda	65,186	36,472
Dodge Ram 50	24,455	15,357
Others	51,279	48,161
Total	408,156	258,438

Computer Gradphics

Simplify Auto Leasing With the Gradison Leasing Computer

And now, you can provide immediate, accurate leasing information — with an easy-to-use, fully programmed hand-held computer from Gradison. Designed to make auto leasing deals easier, the computer leads you step by step through the auto lease calculation. Then it provides leasing information for any car — new or used — in only seconds. And it requires no computer experience, no knowledge of programming or special languages. You get fast, accurate data, with no forgotten steps, no tedious calculations — and no mathematical errors.

For more information about computer Gradphics and about how you can become a Gradison Leasing dealer, just call the leasing specialists at Gradison.

Consultant says more than 50 pct. may fold

Outlook bleak for many truck deals

Continued from Page 16

are controlled by foreign interests.

The big-truck market probably will remain flat through this decade and next, MacKay predicted. Trucks, he said, last longer and most units are purchased as replacement units.

"We're done moving dirt," he said. "We're rebuilding. That's not going to drive growth."

The limited truck market will drive some truck makers and suppliers out of business, he said.

"If a market is not growing rapidly, and this one isn't, then it must brace for a shakeout," MacKay said. "I don't think we can have more than six makers."

Foreign truck makers now eyeing the U. S. will find it a tough market to crack in the short term, MacKay said. However, he said the Japanese and European companies are known to be willing to wait for long-term success.

Tremendous change in the trucking industry also will affect truck dealers, MacKay said.

Deregulation will create a large gap between large and small trucking companies, he predicted, and piggyback transportation, which is growing at 20 percent a year, will have a big impact on truck and equipment sales.

• Independent service and parts outlets also will cut into truck dealers' business, he said, adding that these functions account for the largest margins in dealer profits. Centralized parts rebuilding by OEMs will also cut into dealer business.

"If our (truck-dealer) assumptions are more than a little correct, it will affect truck body companies, too," MacKay told TBEA.

Truck-equipment makers may have to find alternative means of distributing their products (other than dealers), MacKay said.

Body and Equipment manufacturers also will have to pinpoint opportunities if they are to be successful, he said.

August car sales in Japan trail '85 by 6.7 pct.

TOKYO. — Passenger-car sales in Japan fell in August from the year-ago mark.

After a bouyant first half, sales in both July and August were lower than in the year before. Some observers are suggesting that the economic growth has peaked, and that the sales for the rest of the year will be similar to last year's if not slightly lower.

In any event, passenger-car sales totaled 150,158 units in August, down 6.7 percent from August, 1983. Because of the summer holidays, August is never a good sales month in Japan, but the losses suffered by Mazda and Isuzu, compared with last year, were well beyond seasonal factors.

Biggest seller was the Toyota Corolla at 9,659 units, although sales were down 20 percent from last August. Mazda's Familia (GLC) fell back by over 30 percent and was second with 8,590, ahead of the larger Toyota Corona at 8,240 sales — an increase of 20 percent.

Honda, which increased sales by 3.9 percent, and Subaru, with sales up 214 percent were the only winners. Subaru is gaining because of the addition of the J-10 one-liter car to its range in January and because the new 1.6/1.8-liter sedan has just been introduced.

IHW Engineering grants license to Japanese firm

WARWICK, England. — IHW Engineering has granted a license to manufacture its seat-reclining mechanisms to Ikeda Bussan Co., Ltd., Yokohama, Japan.

The agreement allows Ikeda Bussan to manufacture the patented seat-reclining mechanisms for sale to its customers in Japan.

August truck registrations highest since record 1978

Continued from Page 16

78,380 units a year ago. The total was about 4,000 units fewer than the 126,617 heavies tallied in the like period in 1978.

Group 1 registrations through August totaled a record 1,418,617 units, 42.6 percent higher than last year's 995,105 and 53.8 percent of the industry total. In 1978, only 736,091 Group 1 trucks were registered.

The Group 2 count was up 35.6 percent to 1,036,029 units, compared with 763,884 last year. Six years ago—before fuel economy became a greater factor — the Group 2 total was 1,652,402 units.

In Group 3, there were 25,842 registrations through August, an increase of 30 percent over the year-ago 11,235 and slightly fewer than the 28,653 units tallied in the like period in 1978.

The Group 4 count was up sharply from a year ago, but far below the 1978 total. This year there were 455 tallies, compared with 214 last year and 8,899 through August in 1978.

• Eight-month Group 5 registrations were little changed from six years ago, but dramatically higher than a year ago. There were 2,068 tallies this year, compared with only 360 last year and 2,036 in 1978.

Through August, Group 6 tallies totaled 31,907 units, an increase of 10.9 percent over the year-ago 28,769. The count, however, was only about a third of the 94,418 units registered in 1978.

Group 7, which has benefited from the growing switch from gasoline power to heavier diesel engines in Group 6 trucks, was up significantly from both last year and 1978.

Through August, there were 42,553 Group 7 registrations, an increase of 34.7 percent over last year's 31,597 units. Six years ago, the Group 7 total was 24,853.

Group 8 registrations in the January-August period were up 71.1 percent to 80,026 units, compared with 46,783 units. In 1978, the total was 101,764 and in 1979—the best year ever for Group 8 tallies—it was 112,414.

Isuzu Truck's 1st offering in U.S. is Class 3 diesel

Continued from Page 16

for a light-duty diesel truck in America's metropolitan areas, and noted that Ford and Chevrolet will be Isuzu's major competitors. "Together, they account for about 90 percent of this market," he said.

Initially, the KS22 will be marketed only in the West and Southwest, and Allen said the trucks hopefully will be available also in the Midwest by next June.

• Isuzu Truck plans to have 100 dealers in its distribution network by the end of the year, and 250 in all 50 states by the end of 1985, Allen said.

"The KS22 is the type of vehicle that can be marketed well by car dealers and we already have franchised a number of them," he added.

Allen said the company expects to sell 1,100 to 1,200 KS22 units in the vehicle's first full year in the U. S. market, and 250 bus chassis. He estimated that the truck will retail for about $15,000 with a 14-foot body.

The new entries were introduced to dealers here prior to the start of the annual American Trucking Assns. convention and show, in which the Class 3 vehicles and a Class 8 tractor were exhibited.

"Eventually, Isuzu Truck will have products in Classes 4 through 8," Allen said. "There is no timetable for introduction of these vehicles; we want to be sure that the products are right for the U. S. market."

A good anniversary

Ford dealer Gerald P. Good Sr., left, is congratulated by Donald C. Minogue, Ford Division's Boston district manager, as he receives a commemorative plaque honoring the 60th anniversary of Good Brothers Ford, Inc., Randolph, Mass.

Reynolds & Reynolds offers new service forms, systems

DAYTON. — The Automotive Forms Division of Reynolds & Reynolds Co., has introduced a line of service merchandising and management forms and systems which will be marketed under the trademark Service Profits Systems.

The systems and forms are the creation of Dealer Service Corp. (DSC), of Winston-Salem, N. C., a service consulting firm.

Jim Grimm Sr., R & R director of marketing, said R & R began looking at the systems in February and reached formal agreements with DSC in June.

"This is a practical and much needed system," Grimm said. "What makes it succesful is it's visual appeal, ease of use by dealership personnel and easy-to-understand instructional guide.

There are, according to Grimm, maintenance menus for General Motors, Ford Motor, and Chrysler Corp. dealerships.

"These menus help the customer know what required and recommended maintenance services should be performed and when. They help the dealership sell this lucrative 'gravy' work," he said. "The menu contains its own sales pitch and dealership identification."

Grimm said the system also includes a free service check that helps dealership personnel find additional service or repairs for its retail customers who may be unaware of these needs.

• Also included in the new forms are three scheduling and dispatching systems designed for dealers who are not using a computerized system. They contain the basic elements of the automated systems but in manual form. Productivity improvements in the 10 to 20 percent range can result from their usage, Grimm said.

"In addition, there are technician productivity reports and re-check reports to monitor the technicians' performance," he said. "There also is a self-contained telephone satisfaction survey that will determine different areas of service satisfaction and also serves as a dealership public relations device."

Using these systems has greatly enhanced the performance of DSC's clients throughout the U. S. and Canada, according to Lloyd Schiller, DSC president.

Nissan's Taiwan licensee attempts to break away

TOKYO. — Yue, Loong, Nissan's licensee in Taiwan is attempting to get away from Nissan and design its own range of autos.

Currently, it builds the Sentra, Stanza and Bluebird in Taiwan, where it holds about 50 percent of the domestic market.

Over the past few years it has been building up local-content ratio, and about three years ago it started installing a new press facility and design studio.

Yue Loong now claims to have completed a three-year design program, at a cost of $50 million, for a sedan which will be powered by 1.6-, 1.8- and 2.0-liter engines.

Codenamed X-101, the new model is due to enter production at the end of next year and go on sale in 1986.

Evidently, Nissan asked Yue Loong to work with it two months ago to develop a car for Nissan to market in the U.S. and Europe. Presumably, Nissan made this request because it expected that Toyota would lose the Taiwan contract and hoped that it would be able to increase its influence there.

Company officials have said that Yue Loong is prepared to cooperate with "American, European and Japanese car makers" for production in Taiwan, an indication that the company no longer feels bound to Nissan.

The Taiwan equation gets more complicated every day, with news that Mazda and Ford might end up with the contract that Toyota thought it had, and now Yue Loong making noises that it wants to be independent.

25 years for Bennett

CHERAW, S. C.—Robert M. Bennett, of Bennett Motor Co., has received a 25-year dealer award from Buick. He is a second-generation Buick dealer.

Bankruptcy trustee asks $200 million

DeLorean officials sued in Detroit

Continued from Page 1

begin within two years.

The most recent lawsuit was filed three days before the second anniversary of DMC's filing for Chapter 11 protection from creditors under federal bankruptcy laws. The bankruptcy status was changed to Chapter 7 liquidation almost a year ago.

Sources say the most recent lawsuit is not the last, and others associated with DMC will be sued later on similar charges.

The New York lawsuit against Arthur Andersen & Co., seeks $100 million in actual damages and $50 million in punitive damages. It alleges malpractice, negligence, common law fraud and securities fraud.

The suit claims Arthur Andersen and its subsidiaries in the United Kingdom and the Republic of Ireland failed to follow generally accepted auditing standards and failed to reveal the true purpose of transactions involving DMC and an affiliated partnership. The auditing firm relied too heavily on the word of DMC management, the suit said.

"The suit filed by the bankruptcy trustee is obviously for the sole purpose of preserving the rights of the trustee with respect to the technical statute of limitations consideration under the bankruptcy court," a spokesperson for Arthur Andersen said.

"The suit is not based on any intensive investigation undertaken by the trustee. There have been numerous investigations into the DeLorean-related entities with which we have cooperated and are continuing to cooperate," the spokesperson added.

Meanwhile, the results of a year-long federal grand jury investigation into DMC financial irregularities have yet to be seen in Detroit. Many involved in the DMC bankruptcy, including John Z. DeLorean's attorney, had expected the grand jury to wrap up its investigation by Oct. 1. Now, sources say it will be closer to the end of the year.

The probe focuses on alleged criminal tax fraud and bankruptcy fraud, sources said. Of particular interest is the disappearance of the nearly $18 million.

In California, the fight continues between DeLorean and the trustee of DMC over a transaction in which DeLorean turned over his Pauma Valley avocado ranch near San Diego to his attorney, Howard Wietzman, in lieu of legal fees.

At the same time, attorneys for the trustee will be watching the DeLoreans' divorce proceedings closely. Sheldon Toll, attorney for the trustee, said he will be "concerned" if "there is any attempt to prejudice the creditors" in dividing the property.

In Washington, the DeLorean name popped up again in a federal grand jury investigation of financier Jeanne Anne Farnan.

Legal proceedings involving Farnan and her companies, which have filed for bankruptcy, show several loans she allegedly offered to arrange never were completed.

Farnan was trying to arrange a $10 million deal for DeLorean. The deal fell through the day he was arrested on drug charges.

173,065 cars are scheduled, but GM target is unreal

By Louise Kertesz
Detroit Reporter

Last week's auto production total, a projection including estimates for some idled General Motors facilities, is sure to be cut when actual production figures are reported.

Makers targeted assembly of 173,065 cars last week, up 12.85 percent from the 153,352 completed the previous week and 5.56 percent from the year-ago week's 163,947.

So far this year, 6,542,829 cars have been built or scheduled, 18.20 percent more than the 5,535,164 assembled at this point last year.

Companies accounted for last week's projected output as follows: GM, 53.30 percent; Ford Motor Co., 24.16 percent; Chrysler Corp., 17.16 percent; American Motors, 2.77 percent; Honda, 1.73 percent, and Volkswagen of America, 0.88 percent.

At presstime, seven GM car assembly plants were down as a result of the Canadian strike.

GM scheduled two overtime shifts Saturday (Oct. 27) at its plant in Linden, N. J.

Also working overtime Saturday was Ford Motor's plant in Wayne, Mich.

Chrysler has scheduled overtime this week at five plants: Belvidere, Newark, St. Louis No. 1 and 2 and Jefferson.

Truck makers slate production of 63,138 units

Domestic truck production of 63,138 units last week was down 5.03 percent from the previous week's 66,480, because of the Canadian strike's effects, but was still 10.33 percent better than the year-ago week's 57,229.

Year-to-date, 2,591,646 trucks have been assembled, 32.27 percent more than the 1,959,290 built last year at this time.

Two General Motors truck assembly plants were down at presstime as a result of the strike in Canada.

Ford Motor Co. scheduled overtime Saturday (Oct. 27) at its plant in Louisville (Kentucky Truck) and Wayne, Mich. (Michigan Truck).

Chrysler has scheduled overtime this week at its Warren plant.

GM strike cuts Canadian output to year's low

The strike at General Motors caused a drop in Canadian car and truck production to notable lows last week.

The 11,875-unit car output was this year's low, plummeting 23.83 percent from the previous week's 15,590 (reflecting the midweek walkout) and 41.62 percent from the year-ago week's 20,340.

But at 862,858 cars assembled so far, this year's pace is 9.22 percent better than the 789,986 cars built at this time last year.

Last week's truck build of 12,003 units, the lowest since the week ending Aug. 4 (8,418 trucks assembled), was 16.15 percent less than the previous week's 14,315 and 12.82 percent below the year-ago week's 13,768.

Chrysler's Windsor (Ont.) plant expected to complete 2,352 Plymouth Voyagers, 2,346 Dodge Caravans and 942 Mini Ram Vans, bringing the total T-115s assembled this year to 191,418.
